v7-10 WARREN & CO., 130 Washington street.

CALIFORNIA AGENTS.

J. W. Sullivan, *near Post-Office, San Francisco.*
Wells, Fargo & Co., *at all their Offices in this State.*
Pacific Express Company, *at all their Offices.*
Langton & Co., *at all their Offices.*
D. McCord & Co.'s Express.

The Farmer can be found at the following places at all times
Ullman & Co. *P. O. Building, San Francisco.*
J. W. Sanborn, *Benicia.*
Thos. T. Hooper, *Postmaster, Benicia.*
M. M. Richardson, *Suisun.*
J. M. Dudley, Esq., *Napa City and County.*
J. W. Smith, *Napa.*
Rosenbaum & Van Allen, *Stockton.*
P. F. Grant, *Deputy Postmaster, Santa Clara.*
A. A. Dunham, *Half-Moon Bay, will supply those who want papers.*

Foreign Agents.

C. M. Saxton & Co., *New York City. All orders addressed to the Associate Editor, at C. M. Saxton & Co's, will receive attention.*
J. Q. A. Warren, Boston, Mass., *Associate Editor and Corresponding Agent for the Eastern States, by whom Subscriptions and Advertisements are received—Office, 20 Washington street.*
Gray, Adams & Hogg, *Nurserymen, Seedsmen and Florists, Kensington Road, London, will receive Subscriptions for this paper.*
M. Dezaco, *Bookseller, Paris, will receive Subscriptions.*

** Subscribers can always form Clubs and transmit by either of the Expresses, or with perfect safety by Mail.

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.

3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.

4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6½ *cents per quarter*, or 26 cents per year. This is the lawful postage established by Congress and when more is exacted it is a violation of law

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME VII. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, MAY 8, 1857. NUMBER 17.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNIN

Simultaneously at Sacramento and San Francisco.

Office—on Fourth street, between J and K, Sacramento.
—No. 130 Washington street (up stairs), San Francisco

TERMS.—Five dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

☞ Advertisements and Subscriptions must be paid for in Advance.

THE
FIRST INDUSTRIAL EXHIBITION
UNDER THE DIRECTION OF THE
MECHANICS' INSTITUTE
Of the City of San Francisco,
WILL BE OPENED IN SAN FRANCISCO,
On Monday, September 7, 1857,
And continue Open at least Ten Days.

CIRCULAR.

In accordance with the announcement contained in a brief circular issued in December last, THE FIRST INDUSTRIAL FAIR of the MECHANICS' INSTITUTE of the City of San Francisco will be held in said city in September next, commencing on Monday, the 7th day of the month, and continuing open at least ten days.

The Board of Directors having carefully considered in all its bearings the subject of holding a Fair at the time proposed, have arrived at the conclusion that with a reasonable amount of exertion on the part of Mechanics and others interested—such an Exhibition can be made not only creditable, but highly beneficial to our young State.

The advantages of Fairs must appear obvious to every reflecting mind, and in no quarter of the globe do they promise more than in California, where so much may be accomplished by the dissemination of correct information, relative to her natural and artificial resources. Besides exciting emulation; extending practical knowledge; suggesting ideas to ingenious minds; affording tangible evidence of superiority; stimulating talent; promoting extensive social intercourse among producers and their patrons, and exhibiting the progress of the arts; they cannot fail to excite a world-wide interest in regard to our State and extend reliable information respecting its resources, which will tend to encourage immigration and to permanently establish beneath our genial skies, an industrious, enlightened, prosperous and happy population.

We earnestly solicit for exhibition the products of every department of Industry—works of art every variety—choice specimens of ingenuity and skill—rare and valuable productions, natural or artificial—the delicate and beautiful handiwork of women—useful labor-saving machines—implements of mining and husbandry—new models of machinery—the products of the quarry and the mine, the hot-house, the orchard, the vineyard, the garden and the field—in short whatever Nature or Art can contribute, Curiosity discover, or Ingenuity devise.

Importers and Dealers are cordially invited to participate in the Fair by exhibiting whatever is calculated to excite interest or extend information in regard to useful improvements.

Persons throughout this State and Oregon are requested to communicate such facts relative to the natural resources, and the facilities for industrial pursuits in their respective districts, as may be deemed by them important; also to give reliable information concerning the geology and mineralogy of their particular localities; and, a Committee of scientific and practical men will be appointed to prepare a report based upon the information thus derived.

We cordially invite the co-operation of all classes in the community, believing that *all* are interested in making this, an Exhibition worthy of general notice and admiration. Medals and Diplomas will be awarded to the owners of such articles as may be deemed worthy of such distinction, and we intend that the strictest impartiality and fairness shall be observed in the appointment of Judges and the distribution of awards.

We confidently hope that the experiment about to be made of holding an Annual Industrial Fair in San Francisco, will be crowned with success and give general satisfaction.

The California Steam Navigation Company—the Pacific Mail Steamship Company, and other Transportation Companies, have generously offered to carry articles intended for the Fair, free of charge.

All articles forwarded, should be labeled, "*For the Industrial Fair*," and addressed to "P. B. DEXTER, *Mechanics' Institute, San Francisco.*"

RULES AND REGULATIONS

Of the First Industrial Exhibition of the Mechanics' Institute, of the City of San Francisco.

I.

The Rooms will be opened for the reception of goods on Monday, August 24th, and continue open for that purpose until Saturday, September 5th, and the Exhibition will be opened to the public on the Monday following.

II.

When articles are entered, a check for the same will be given, which must be presented when the articles are returned.

III.

The name of every article should be attached to it, and also a description, pointing out its merits, when thought desirable by the exhibitor.

IV

Articles intended for sale will be labeled accordingly, but cannot be removed until the close of the Exhibition except by the written permission of the Committee of Arrangements.

V.

Light, fancy, or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the Executive Committee.

VI.

Proof of origin must be given when required.

VII.

Committees will be appointed to examine all articles presented, and the Executive Committee will award premiums, on such as the several Committees shall decide most worthy. The Premiums to be delivered as soon as they can be prepared.

VIII.

The morning of each day till 9 o'clock, will be appropriated to the Judges, and visitors will not be admitted during said time.

IX.

In case of misunderstanding, application may be made to the Executive Committee, who will at all times be in attendance.

X.

Steam power will be provided, that Machinery of all kinds may be seen in actual operation, and every facility possible will be given to exhibit all working machinery to the best advantage.

XI.

All articles deposited will be at the risk of the owners, who are invited to be present during the hours of exhibition. In the intervals of the exhibition, efficient measures will be taken for the protection of property.

XII.

Articles from a distance will be stored free of charge, until the rooms are in readiness.

XIII.

Owners or agents offering articles for exhibition, will receive tickets of admission gratis, but in no case transferable.

XIV.

Persons intending to take part in the Exhibition, are earnestly requested to make known their intention at the earliest practicable period—stating the kind of article or articles they intend exhibiting and the probable amount of space required.

XV.

For further information, address, H. F. WILLIAMS, *Corresponding Secretary of the Mechanics' Institute, San Francisco.*

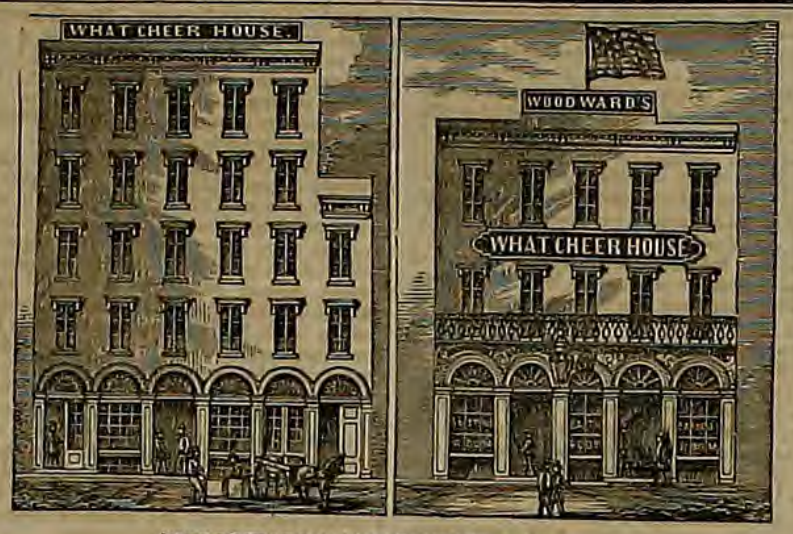
JOHN SIME, GARDNER ELLIOTT.
H. F. WILLIAMS, P. B. DEXTER,
J. E. KINCAID, J. A. BANKS,
ELI COOK, ISAAC E. DAVIS,
WM. MCKIBBEN, G. D. STREET,
C. L. TAYLOR, DANIEL VAN PELT,
Executive Committee.

The Peach Blight.

FOR the last four weeks we have traveled much among the Peach Orchards, to note the effects of the blight upon this kind of fruit trees, and we shall lay the result before our readers. We find that all old California seedling peaches are *universally blighted*, and the leaves and fruit dropping; we find some varieties of budded fruit affected in the same way, and have taken pains to examine and note these facts. We have the promise of all the peach growers we have seen that they will note the *kinds* of peaches affected, and the degree to which they are injured, and will write to us. We now ask most particularly, of all fruit growers, to please examine the *kinds* of *fruit*, keep a record of the names of fruit affected, and to what extent; also the seedling fruits, and write us at the earliest moment. By this help we can arrive at facts that will benefit all, and if we can have the co-operation of all fruit growers we can effect much good.

Messrs. Thompsons of Suscol, and Mr. Smith of Sacramento, gentlemen of experience, are making observations, and they will furnish us facts. We ask Messrs. Beach & Shephard, Mr. Briggs of Yuba county, and all others interested, to do the same, and write us particularly, and we will do all we can for their benefit.

THE CALIFORNIA PAPER MILL.—We feel it a duty to call attention to the quality of the paper from this mill. We hope every newspaper in the State will give their countenance and support to the enterprise of Messrs. Taylor and Post, and thus encourage home manufactures. They now employ about twenty workmen, and turn out several tons of paper per week. They want all the rags they can get, for which they pay fair prices, and cash on delivery.



WOOODWARD'S WHAT-CHEER HOUSE.

With pleasure we avail ourselves of the opportunity of introducing to public notice a cut of one of the leading Hotels of the Pacific Coast, "Woodwards What-cheer House," that our readers and all travelers may see what has been long and favorably known as the "Home of the People." Woodward's What cheer House is emphatically what it has so long been described, a home for the traveler, and a stranger who visits it for the first time will be struck with the ease and quiet which prevails in every department.

It is but justice to the able proprietor of this widely known Hotel to say, that no proprietor on the Pacific Coast has done more to make his guests comfortable and happy, than has the proprietor of the What-cheer. With a Hotel that is like a castle, every room throughout passes under his constant supervision, and *Halls, Dining-rooms, Sleeping apartments, Reading-rooms, Baths*, all are regarded by his watchful eye as means of comfort for those who call at the What-cheer, and the *Tables, Sleeping-rooms, and Reading-rooms*, will equal any on these shores for excellence and elegance.

There is one feature in this Hotel that demands more than a passing notice: we mean the LIBRARY and READING-ROOMS. We look upon the efforts made by Mr. Woodward to establish a love of reading among the thousands who visit his house as worthy of all praise. His Library is not of an ordinary kind, but is large and varied, containing rare and valuable works, and *complete* sets of works, such as are seldom found in private libaries even; and it is interesting to note the interest shown by hundreds of his boarders who are found daily and during every evening improving the excellent opportunity thus given them by the liberal proprietor of the What-cheer. If it is said that "he who makes two blades of grass grow where but one grew before, is a benefactor of his race," what shall be said of him who lays a plan to induce the growth of *intellect*, and presents inducements to men to improve the mind and heart, instead of wasting their time in idling and profligacy. To the proprietor of this excellent house we would accord the higher rank of benefactors, and we rejoice to know his efforts are duly appreciated.

Educate Farmers' Boys at Home.

THE following letter from "one who knows" about the influence of cities and politics upon the young men of our land, is worthy a careful perusal. We join most heartily, and say to Parents, keep your boys in the country—educate them for the country—teach them to love a rural life, and they will find more health, more prosperity, and more happiness, than in any other occupation allotted to man. Most cheerfully do we respond, and also raise our earnest entreaty to Parents to educate their sons to the noble cause of Agriculture, as the surest means of securing their happiness:

EDITORS FARMER: I have frequently been spoken to by farmers' boys, and likewise their parents, about the aspiring, dissatisfied youths seeking a city home and employment. Invariably and warmly have I urged them to stay in the country, to go even on a visit to one of the towns as seldom as possible. I had a double reason for giving such advice—one, because it was beneficial—far for the best for those asking it, to act in conformity with it; and another, that I knew the only hope, salvation and lasting prosperity of the country, physically, morally and politically, lay in its rural population.

In California especially is it of vital necessity to increase as rapidly as possible a permanent and intelligent agricultural and herding class. Cities the world over, are hotbeds of vice, sinks and sewers of filth—"sores upon the body politic." Our cities and particularly San Francisco, are no common sores either—they are cancers, and rapidly eating away all of the virtuous strength and wholesome vitality of the State. I charge this on no particular class or party there, for I except none. The higher class so termed, the wealthy and thereby influential, are most to blame. Largely have these aided to bring society to its present horrid condition and the government on the verge of dissolution. This I told them of at the time, and warned them of the evil fruits which would soon ripen from the false, bad seed they were so recklessly and insensately sowing.

I am no idle alarmist, nor have I naturally a gloomy turn of mind, yet to me there is a dark, very dark future still for California—relieved, 'tis true, by an occasional gleam of sunshine and hope for a better state of things after a while. But when will that better day arrive? This depends upon the action taken by what virtuous sentiment and permanent interest is left in our deeply polluted and misgoverned land. So far as I can aid in combining these and wielding such practically and as speedily as possible for our deliverance, it shall be done. In battling for right against wrong, virtue against vice, my armor has never been off, nor have I slept at my post. But in the more terrible struggle for the mastery yet to come, between these antagonist principles in California, which involves the very existence of the government, I am sharpening my weapons anew and storing my ammunition for the inevitable war—which, perchance, may not be altogether of a moral nature.

In the attempt to right matters, prompted so to do in order to protect property and life, our cities may *start* revolutions, but not complete them so as to establish affairs on a solid and permanent basis. They do not contain a sufficiency of virtue and true spirit of manhood for this. Hence I seek to populate the country outside, from which quarter alone—in the ranks of a bold and honest yeomanry, attached and tied to the soil—can such recruits be drawn, as will achieve a victory in the final battle, and maintain a pure society and government, so long as it is possible for the people, as a whole, to keep up a popular form of government; in which form virtue and intelligence among the masses are indispensable ingredients.

Therefore would I urge upon you, Messrs. Editors, to keep the farmers advised of the impolicy of sending their boys to town. Tell them of the immense number of idlers now almost starving in our streets—of the vitiated sentiments their sons will imbibe, and rare exceptions where one of them can hope to rise to any distinction in the learned professions, or obtain wealth or even competency by trade, speculation or mechanism.

If the young man have genius and ability above the common order, and there be in his own mind a consciousness of such, and determination to rise to position and fame in mental labor, why let him have his bent and way.

Still it is better not to come too soon to live in town. That he should love the latter, and prefer a residence in it, better than his native field and forest home, after the first charm and novelty had worn off and he had time to see and know the reality of the glittering tinsel and painted bawd, will be proof positive that he is no true man, and never destined to give credit to himself, nor do honor to his country.

Let our farming population keep themselves and their sons away from the mines, also. This is a very bad school too. It is a lottery and gambling business, and like all other gambling operations causes men to become dissipated, reckless, spendthrift and vicious. Besides, nobody is at home in the mining district. There is no permanency there, no citizens, at least very few to be met with—consequently no lasting ties of interest and friendship, which will connect themselves with the prosperity of the State, can be formed.

Happy indeed for this beautiful land, after the reaction was over, were every dollar of gold to be at once dug out and carried away, and along with it the infamous and undesirable portion of population it attracted hither.

CHAS. E. PICKETT.

(For the California Farmer.)

A Private Remedy against a Public Nuisance.

MESSRS EDITORS: I regret to learn, through the FARMER of the 10th instant, that my friend Mr. Sonntag of the Mission Dolores, has had his valuable plants so much injured. I have little doubt that the injury has been produced by the cause to which you and he attribute it. The Chemical Works adjoining are principally employed in the manufacture of acids for the Mint, and as they are situate to the West of Mr. Sonntag's gardens, and the wind blows strongly at this season of the year from that quarter, it is very likely that noxious vapors from the Works, borne on its wings, have occasioned the injury which his delicate plants have sustained.

I do not think, however, that the air is so poisoned as to endanger life, or that the nuisance complained of could be so clearly established as to obtain for the sufferer a remedy at law. Nor is it likely that any chemical change in the plants themselves could be traced by means of an analysis; and if there were any slight difference between the constituents of the affected plants and those obtained from similar plants in a healthy condition, it would be occasioned by an exertion on the part of Nature to defend herself against the effects of the unusual atmosphere in which the plants had to grow. Consequently, an analysis of the diseased plants would indicate plants more than usually fortified against such an atmosphere.

The simplest remedy seems to be to assist Nature in defending her plants against the peculiar atmosphere to which they are exposed. Let us see what the peculiarities of that atmosphere are, and of what elements those noxious vapors are composed.

The manufacture of sulphuric acid, for instance, is conducted by burning sulphur in a close chamber, in which the atoms of sulphur combine in a gaseous form with the oxygen of the atmosphere, and the gas thus formed possesses exactly the same constituents as liquid sulphuric acid, being composed of one equivalent of sulphur, and three equivalents of oxygen. It is the large proportion of oxygen which gives the acid its acid quality. The sulphur of itself would be quite harmless to the plants, nay to many might be very beneficial; but if such vapors escape during the process of the manufacture, the excess of oxygen (which by the way is a heavier gas than common air, and except when heated would not rise up in the atmosphere) would wither them as if they had been scorched—the very appearance, I presume, which the plants present.

In common air oxygen always exists in the same proportion; but as the atmosphere is not always of the same density, when the air is denser than usual, plants under ordinary circumstances, are exposed to a similar risk, though in a less degree; and the means which Nature adopts in such cases is to fortify the plants by making them imbibe a more than usual portion of their alkaline constituents, of which potash is the principal. Herein consists Mr. Sonntag's natural remedy; by assisting Nature in the unusual difficulty to which she is exposed. Instead of attempting to rouse the popular indignation against what after all is at least a *home manufacture*, and an aid to a great convenience for the inhabitants of this State, let him apply to his plants, as early in spring as possible, a good dressing of wood-ashes, which would be very much improved by being well moistened with urine, or some ammoniacal liquid. As the vapor of the Chemical Works began to stimulate the leaves of his plants, they would seek for a defence against its otherwise too active qualities in the readily accessible alkaline matter with which they had been manured, and the only effect would be, that instead of being destroyed their growth would be more vigorous, and the Chemical Works, which Mr. Sonntag suspects to have been the cause of his misfortune, would become a useful ally in enabling him to raise probably finer flowers, and in greater luxuriance than he has ever produced. RESP'L'Y, WM. THOMPSON.

MILLBRTON, 25th April, 1857.

Nothing could be more opportune and nothing more reliable than the above communication from our able correspondent upon the subject of the loss of Mr. Sonntag's beautiful roses, at the Mission, by reason, as Mr. S. supposes, of the deleterious atmosphere of Chemical Works near his gardens. It will be recollected that we suggested some experiments to decide the question of injury; and we were surprised to notice the decision of the Supervisors upon the subject. We look upon their decision as wanting not only in judgment, but as too lightly passing over a subject of so much interest to the whole vicinity. We were somewhat surprised that a more satisfactory investigation was not had before the subject was permitted to rest.

We are very glad, however, to present the above communication as being to the point, and so well presented as to give very valuable and important information in this and similar cases.

Management of Bees.

BY E. LINK, GREENVILLE, TENN.

THE stuff for the hives should not be less than one inch and a fourth thick, or if thicker the bees will be still less affected by the external changes of the air, a matter of much importance, as it is seen that they raise their brood as near the centre of the comb and as far removed from external influences as is practical. I always have glass in my caps to avoid removing them until fall, and have them of various sizes, using the smaller as the season advances. It not unfrequently happens that bees will fill a small cap, when the season has progressed so far that they will make no commencement on a large one. Rob the hive but once in a season, however good an one it may be for honey; for bees often become disheartened where their hives are oftener opened, but after being fitted up for winter supplies, as many caps may be taken off as they will fill, which depends upon the season and the strenth of the swarm. About every two or three years at most, select cold weather, and by letting down the bottom board, cut out all the old black comb to the cross-sticks. Every brood raised in comb thickens it and contracts the cells, dwarfing the bees, and being more or less abandoned, the millers gain easy access to them to occupy them with their eggs. To cut them out is to keep your bees renovated.

In the fall, all the hives should be examined; those having a good amount of bees, but short of honey, should have a cap of honey placed on each; a very little will often save a swarm, and if not wanted will be promptly accounted for the next season. Those that are weak in numbers should be doubled together. By blowing a few whiffs of tobacco smoke into each hive and putting them together while thus sickened, they will continue to harmonize and survive upon much less honey than they would live upon separately. A small amount of bees together will do no good in summer and cannot withstand the winter. Strong hives will sometimes send out such excessive numbers in swarms as to leave a great deficiency in numbers at home. They apparently despond and seemingly lose their organization for work. I once had two hives in this condition at once, and for three weeks remained in their hives as in winter, having but little honey, when early in August I put them together—the moth having partly taken possession of the abandoned comb of one of them. They went speedily to work and in the fall were rich and in fine condition for winter. It often happens that the moth is blamed for the loss of bees, when they are effectually destroyed by some other cause, and the moth has merely taken possession of the ruins. If bees are kept in suspended hives, of workmanship that leaves no open joints or lodgments in old comb or otherwise for the worms to hatch and find protection in, and the causes that reduce the numbers too low counteracted, there would be very little complaint of bee moths.

Therefore, all late swarms, where the queen can be found and destroyed, should be returned to the hives they left, judicious doubling attended to, and late or excessive robbing avoided. All "bee palaces" are humbugs and have no application to the nature or requirements of bees. To prevent them from swarming by extending their room is warring against their instincts and propensities. They require a degree of heat to raise their brood and work their wax which they can too seldom raise in the room of a "palace." If in sufficient numbers for the room they are in each others way, and, with bees as in legislation, large bodies move slow, and soon, some of the many causes that destroy bees, such as storms, disease, &c., will reduce the colony below the proportion of the space, and the dwindling down of the stock will leave the palace an empty nuisance, and its owner minus the bees. When two or more swarms come out at the same time all must have observed their disposition to settle together. This gives a hint of some practical convenience, and by tying a bunch of old mullen heads, a knot of a tree, or something that nearly resembles a swarm of bees, when settled, to the end of a light pole, and placing it in a bush or tree in the swarming season, many if not all the swarms will light upon it, making it convenient for almost any one to lift them to the mouth of the hive, without being immediately amongst the bees, and they will nearly always return gentle or violent treatment, as you choose to offer it.

If the hive stands in the sun when hiving, it should be shaded until the bees go in and it is hung in the frame. Bees sometimes do much mischief by robbing each other, and when it is necessary to put a cap of honey on a weak swarm, care should be used to choose a time when few are flying out, and that none should be sticking on the outside or running from the comb. They may be generally stopped by closing the hive until evening, then letting the robbers out and remove the hive to a new place some distance off, or they may be immediately stopped by setting some honey in front of the hive, which they will speedily work upon instead of the hive they are robbing. It is a most excellent plan to place the hives during winter in a dry cellar, or any close out-building, the temperature being more uniform, and the greater want of light confines them to their quarters. They neither rob nor are tempted out by warm, bright weather, to be chilled and unable to return. From this cause swarms often suffer in numbers after the winter is well nigh passed.

Some seasons, from whatever cause it happens, many more swarms refuse to be hived and go off, than is usual. They may often be stopped, made to settle, and submit to a hive, by throwing gravel, sand, or anything else amongst them when on wing, that will disturb their organization and arrangement for their flight. For they proceed with a system in all their operations, that it would be well, were it better imitated. I have had several swarms come off very early in the season, and bad weather immediately setting in, I saved them only by feeding until they could go out in quest of their own support, when they soon repaid me a fine per cent for the little attention given them; and were more attention given to the management of bees, it would prove more remunerating in its profits, more interesting in its study, and profitable in its example than perhaps any other branch of rural production by which we are bound by unalterable necessity, to draw for our sustenance, the sweets from dame nature.

IT has been discovered that the biforcation, or *limbing* of trees, is effected by caterpillars and other leaf eaters eating through the centre. Taking this hint, it has been found by experiment that fruit may be dealt with in the same way as wood, and that by intersection of the buds two or four can be made out of one, and the fruit-branches multiplied. In the place of those assiduous pruner and intersectors—the insects—the knife may be used, and trees arranged in a way at once the most picturesque and fantastic; and fructifications and the formation of the buds may be developed according to the wish of the horticulturist.

Hog Disease.

DURING the last year or more a very destructive epizootic has prevailed among the hogs throughout considerable portions of the Ohio Valley. From the sudden and great fatality which attends the disease, and its similarity, in some respects, to the cholera in the human family, it has been called the hog cholera or plague.

It is a little remarkable that when such immense numbers of valuable animals have been so suddenly swept off by this disease, that so few men of science have taken upon themselves the duty of investigating its cause and character, with a view to find out a remedy or preventive.

The accounts that have reached us of this disease, have generally been confined to the hogs fed at distilleries; but whether it had its origin in these establishments or not we have no authentic information. That fatal diseases should originate among swine, kept as they are at these places, is not at all to be wondered at; the wonder is that they are not more frequent. But whether this disease had its origin in the distilleries or not, it has not been confined to them alone, for it has prevailed on many of the neighboring farms throughout the infected districts, and large numbers of valuable animals have been lost by it.

The only description of the character of this disease that has reached us, is from the pen of George Suttton, we presume an M. D., of Aurora, Ind., which appeared in a late number of the Cincinnati Gazette. He appears to have made quite a thorough investigation by repeated examinations of the internal organs of the diseased animals and finds that their appearances are various, as the symptoms are different. From an examination of forty-seven hogs that died of this disease, he scarcely found two that presented precisely the same appearance.

We have not the space to give the full details of these examinations, but will furnish our readers the most important facts, with some suggestions touching the means of prevention and cure.

So far as information has been received by Mr. Sutton, the disease has prevailed in Indiana in the counties of Ohio, Switzerland, Ripley, and Dearbon. In Ohio in the counties of Montgomery, Butler, Hamilton, and Clinton. In Kentucky in the counties of Kenton, Boone, and Gallatin. We have heard of some instances where it has extended to the interior among a considerable number of farmers.

To give an idea of the number of hogs that have died, the losses at the following places are stated: At Ingraham's distillery, from the 1st of August to the 24th of October, 1285 had died. At the distillery in Petersburg, Ky., since the 18th of October, 2576. Mr. Pate, of Rising Sun, lost 500; Mr. Slomer, of Covington, 500; Messrs. Gaff, of Aurora, 4546. At New Richmond, since the disease made its appearance, 10,435 have died, making an aggregate, so far as accounts have been received, of 60,000 hogs, valued at $300,000, and when fatted would have been worth $650,000.

From experiments made at Aurora, it is stated that the disease is more violent upon hogs that are fed on dry corn than those fed on slop. The average number that died in the pens, that had been fed on slop, was from 33 to 55 per cent. The average number fed upon corn, that died, is put down at from 60 to 75 per cent.

It is proved that the disease is contagious, and that the latest period of contagion is about thirteen days. It is also ascertained that the pens in which diseased hogs have been in will retain the infection, in warm weather, for more than four days, and probably from ten to twenty. Another very important fact has been ascertained: that the hog is not subject to the disease but once. Not an instance has been noticed where one has been attacked the second time.

In one instance, 100 hogs were put into a pen by themselves and fed on corn and water for thirty days, during which time they all remained well. They were then put into pens with diseased hogs, and in fourteen days the disease made its appearance among them. Dr. Sutton inoculated eight hogs with blood from diseased parts of hogs that had died of this disease; in fourteen days they were all unwell, and one died, and all died within a week of each other, with the exception of one, which recovered.

Although this disease proves so infectious to hogs, it seems very conclusive that it cannot be communicated to the human system. While dissecting the diseased hogs, Dr. Sutton several times wounded his hands, which readily healed without any extraordinary inflammation, and the men who were constantly at work among them were not affected by the disease.

As a preventive, it is suggested that, diseased hogs should at once be separated from the healthy ones, and when disease is prevailing in a neighborhood, farmers should keep their hogs from running at large, as the disease has been clearly traced in extending from farm to farm.

To destroy the infection in a pen, it is recommended that the parts be well washed with a strong solution of sulphate of iron, nitrate of lead, or sprinkled with chloride of lime.

As a remedy, laudanum and linseed oil is recommended, when the disease assumes the form of diarrhea or dysentery. Some farmers speak highly of a solution of soap, in which sulphur is mixed.

Mr. Rann, residing in Ripley county, Indiana, states that he lost a large number of hogs with the disease last fall. He drove the remainder of his stock into a neighboring creek, and made them swim about in the water, and fed them in the water, and that, after receiving this treatment, the sick hogs rapidly recovered, and he lost no more.

Light upon this subject, can only be obtained by intelligent, careful and thorough examination; and we hope that wherever the disease occurs, persons qualified for the task will thoroughly investigate it and give us the result. If the same pains had been taken in every neighborhood where the disease has appeared, that Dr. Sutton has taken, much valuable information could have been derived, which would prove of vast importance to the public.—[Valley Farmer.

Tenacity of Iron.

THE Mining Chronicle says: Being frequently asked to republish the results of the experiments which have been made on this subject, we annex the following, obtained by Prof. W. B. Johnson, showing the strength of the descriptions named:

Iron from.	Strength in lbs., per square inch.
Salisbury, by means of 40 trials	58,000
Sweden, by means of 4 trials	58,084
Center County, Pa., by means of 15 trials	58,400
Lancaster County, Pa., by means of 2 trials	58,061
McIntyre, New York, by means of 4 trials	58,912
England (cable bolt), by means of 5 trials	59,105
Russia, by means of 5 trials	76,069
Cape River, Lake Sup. (det'd by Maj. Wade)	89,582

Thus it will be seen that the Lake Superior iron is about one-third better than all other kinds but one.

Miscellany.

A Descent into the Maelstrom.

BY EDGAR A. POE.

"THE ways of God in Nature, as in Providence, are not our ways; nor are the models that we frame any way commensurate to the vastness, profundity, and unsearchableness of His works, which have a depth in them greater than the well of Democritus."—[Joseph Glanville.

We had now reached the summit of the loftiest crag. For some minutes the old man seemed too much exhausted to speak.

"Not long ago," said he at length, "and I could have guided you on this route as well as the youngest of my sons; but, about three years past, there happened to me an event such as never happened before to mortal man—or at least such as no man ever survived to tell of—and the six hours of deadly terror which I then endured have broken me up body and soul. You suppose me a *very* old man—but I am not. It took less than a single day to change these hairs from a jetty black to white, to weaken my limbs, and to unstring my nerves, so that I tremble at the least exertion, and am frightened at a shadow. Do you know I can scarcely look over this little cliff without getting giddy?"

The "little cliff," upon whose edge he had so carelessly thrown himself down to rest that the weightier portion of his body hung over it, while he was only kept from falling by the tenure of his elbow on its extreme and slippery edge—this "little cliff" arose, a sheer unobstructed precipice of black shining rock, some fifteen or sixteen hundred feet from the world of crags beneath us. Nothing would have tempted me to within half a dozen yards of its brink. In truth, so deeply was I excited by the perilous position of my companion, that I fell at full length upon the ground, clung to the shrubs around me, and dared not even glance upward at the sky—while I struggled in vain to divest myself of the idea that the very foundations of the mountain were in danger from the fury of the winds. It was long before I could reason myself into sufficient courage to sit up and look out into the distance.

"You must get over these fancies," said the guide, "for I have brought you here that you might have the best possible view of the scene of that event I mentioned—and to tell you the whole story with the spot just under your eye."

"We are now," he continued, in that particularizing manner which distinguishes him—"we are now close upon the Norwegian coast—in the sixty-eighth degree of latitude—in the great province of Nordland—and in the dreary district of Lofoden. The mountain upon whose top we sit is Helseggen, the Cloudy. Now raise yourself up a little higher—hold on to the grass if you feel giddy—so—and look out, beyond the belt of vapor beneath us, into the sea."

I looked dizzily, and beheld a wide expanse of ocean, whose waters wore so inky a hue as to bring at once to my mind the Nubian geographer's account of the *Mare Tenebrarum*. A panorama more deplorably desolate no human imagination can conceive. To the right and left, as far as the eye could reach, there lay outstretched, like ramparts of the world, lines of horridly black and beetling cliff, whose character of gloom was but the more forcibly illustrated by the surf which reared high up against it its white and ghastly crest, howling and shrieking forever. Just opposite the promontory upon whose apex we were placed, and at a distance of some five or six miles out at sea, there was visible a small, bleak-looking island; or, more properly, its position was discernible through the wilderness of surge in which it was enveloped. About two miles nearer the land, arose another of smaller size, hideously craggy and barren, and encompassed at various intervals by a cluster of dark rocks.

The appearance of the ocean, in the space between the more distant island and the shore, had something very unusual about it. Although, at the time, so strong a gale was blowing landward that a brig in the remote offing lay to under a double-reefed trysail, and constantly plunged her whole hull out of sight, still there was here nothing like a regular swell, but only a short, quick, angry cross dashing of water in every direction—as well in the teeth of the wind as otherwise. Of foam there was little except in the immediate vicinity of the rocks.

"The island in the distance," resumed the old man, "is called by the Norwegians Vurrgh. The one midway is Moskoe. That a mile to the northward is Ambaaren. Yonder are Islesen, Hotholm, Keildhelm, Suarven, and Buckholm. Further off—between Moskoe and Vurrgh—are Otterholm, Flimen, Sandflesen, and Stockholm. These are the true names of the places—but why it has been thought necessary to name them at all, is more than either you or I can understand. Do you hear anything? Do you see any change in the water?"

We had now been about ten minutes upon the top of Helseggen, to which we had ascended from the interior of Lofoden, so that we had caught no glimpse of the sea until it had burst upon us from the summit. As the old man spoke, I became aware of a loud and gradually increasing sound, like the moaning of a vast herd of buffaloes upon an American prairie; and at the same moment I perceived that what seamen term the *chopping* character of the ocean beneath us, was rapidly changing into a current which set to the eastward. Even while I gazed, this current acquired a monstrous velocity. Each moment added to its speed—to its headlong impetuosity. In five minutes the whole sea, as far as Vurrgh, was lashed into ungovernable fury; but it was between Moskoe and the coast that the main uproar held its sway. Here the vast bed of the waters, seamed and scarred into a thousand conflicting channels, burst suddenly into frenzied convulsion—heaving, boiling, hissing—gyrating into gigantic and innumerable vortices, and all whirling and plunging on to the eastward with a rapidity which water never elsewhere assumes, except in precipitous descents.

In a few minutes more, there came over the scene another radical alteration. The general surface grew somewhat more smooth, and the whirlpools, one by one, disappeared, while prodigious streaks of foam became apparent where none had been seen before. These streaks, at length, spreading out to a great distance, and entering into combination, took unto themselves the gyratory motion of the subsided vortices, and seemed to form the germ of another more vast. Suddenly—very suddenly—this assumed a distinct and definite existence, in a circle of more than a mile in diameter. The edge of the whirl was represented by a broad belt of gleaming spray; but no particle of this slipped into the mouth of the terrific funnel, whose interior, as far as the eye could fathom it, was a smooth, shining, and jet-black wall of water, inclined to the horizon at an angle of some forty-five degrees, speeding dizzily round and round with a swaying and sweltering motion, and sending forth to the winds an appalling voice, half shriek, half roar, such as not even the mighty cataract of Niagara ever lifts up in its agony to Heaven.

The mountain trembled to its very base, and the rock rocked. I threw myself upon my face, and clung to the scant herbage in an excess of nervous agitation.

"This," said I at length, to the old man—"this *can* be nothing else than the great whirlpool of the Maelstrom."

"So it is sometimes termed," said he. "We Norwegians call it the Moskoe-strom, from the island of Moskoe in the midway."

The ordinary accounts of this vortex had by no means prepared me for what I saw. That of Jonas Ramus, which is perhaps the most circumstantial of any, cannot impart the faintest conception either of the magnificence, or of the horror of the scene—or of the wild bewildering sense of the *novel* which confounds the beholder. I am not sure from what point of view the writer in question surveyed it, nor at what time; but it could neither have been from the summit of Helseggen, nor during a storm. There are some passages of his description, nevertheless, which may be quoted for their details, although their effect is exceedingly feeble in conveying an impression of the spectacle.

"Between Lofoden and Moskoe," he says, "the depth of the water is between thirty-six and forty fathoms; but on the other side, toward Ver (Vorrgh) this depth decreases so as not to afford a convenient passage for a vessel, with the risk of splitting on the rocks, which happens even in the calmest weather. When it is flood, the stream runs up the country between Lofoden and Moskoe with a boisterous rapidity; but the roar of its impetuous ebb to the sea is scarce equaled by the loudest and most dreadful cataracts; the noise being heard several leagues off, and the vortices or pits are of such an extent and depth, that if a ship comes within its attraction, it is inevitably absorbed and carried down to the bottom, and there beat to pieces against the rocks; and when the water relaxes, the fragments thereof are thrown up again. But these intervals of tranquility are only at the turn of the ebb and flood, and in calm weather, and last but a quarter of an hour, its violence gradually returning. When the stream is most boisterous, and its fury hightened by a storm, it is dangerous to come within a Norway mile of it. Boats, yachts, and ships have been carried away by not guarding against it before they were within its reach. It likewise happens frequently, that whales come too near the stream, and are overpowered by its violence; and then it is impossible to describe their howlings and bellowings in their fruitless struggles to disengage themselves. A bear once attempting to swim from Lofoden to Moskoe, was caught by the stream and borne down, while he roared terribly, so as to be heard on shore. Large stocks of firs and pine trees, after being absorbed by the current, rise again broken and torn to such a degree as if bristles grew upon them. This plainly shows the bottom to consist of craggy rocks, among which they are whirled to and fro. This stream is regulated by the flux and reflux of the sea—it being constantly high and low water every six hours. In the year 1645, early in the morning of Sexagesima Sunday, it raged with such noise and impetuosity that the very stones of the houses on the coast fell to the ground."

In regard to the depth of the water, I could not see how this could have been ascertained at all in the immediate vicinity of the vortex. The "forty fathoms" must have reference only to portions of the channel close upon the shore either of Moskoe or Lofoden. The depth in the center of the Moskoe-strom must be immeasurably greater; and no better proof of this fact is necessary than can be obtained from even the sidelong glance into the abyss of the whirl which may be had from the highest crag of Helseggen. Looking down from this pinnacle upon the howling Phlegethon below, I could not help smiling at the simplicity with which the honest Jonas Ramus records, as a matter difficult of belief, the anecdotes of the whales and the bears; for it appeared to me, in fact, a self-evident thing, that the largest ships-of-the-line in existence, coming within the influence of that deadly attraction, could resist it as little as a feather the hurricane, and must disappear bodily and at once.

The attempts to account for the phenomenon—some of which, I remember, seemed to me sufficiently plausible in perusal—now wore a very different and unsatisfactory aspect. The idea generally received is, that this, as well as three smaller vortices among the Ferroe islands, "have no other cause than the collision of waves rising and falling, at flux and reflux, against a ridge of rocks and shelves, which confines the water so that it precipitates itself like a cataract; and thus the higher the flood rises, the deeper must the fall be, and the natural result of all is a whirlpool or vortex, the prodigious suction of which is sufficiently known by lesser experiments." These are the words of the Encyclopedia Britannica. Kircher and others imagine that in the center of the channel of the Maelstrom is an abyss penetrating the globe, and issuing in some very remote part—the Gulf of Bothnia being somewhat decidedly named in one instance. This opinion, idle in itself, was the one to which, as I gazed, my imagination most readily assented; and mentioning it to the guide, I was rather surprised to hear him say that, although it was the view almost universally entertained of the subject by the Norwegians, it nevertheless was not his own. As to the former notion, he confessed his inability to comprehend it; and here I agreed with him—for, however conclusive on paper, it becomes altogether unintelligible, and even absurd, amid the thunder of the abyss.

"You have had a good look at the whirl now," said the old man, "and if you will creep round this crag, so as to get in its lee, and deaden the roar of the water, I will tell you a story that will convince you I ought to know something of the Moskoe-strom."

I placed myself as desired, and he proceeded.

"Myself and my two brothers once owned a schooner-rigged smack of about seventy tons burden, with which we were in the habit of fishing among the islands beyond Moskoe, nearly to Vurrgh. In all violent eddies at sea there is good fishing, at proper opportunities, if one has only the courage to attempt it; but among the whole of the Lofoden coastmen, we three were the only ones who made a regular business of going out to the islands, as I tell you. The usual grounds are a great way lower down to the southward. There fish can be got at all hours, without much risk, and therefore these places are preferred. The choicest spots over here among the rocks, however, not only yield the finest variety, but in far greater abundance; so that we often got in a single day, what the more timid of the craft could not scrape together in a week. In fact, we made it a matter of desperate speculation—the risk of life standing instead of labor, and courage answering for capital.

"We kept the smack in a cove about five miles higher up the coast than this; and it was our practice, in fine weather, to take advantage of the fifteen minutes' slack to push across the main channel of the Moskoe-strom, far above the pool, and then drop down upon anchorage somewhere near Otterholm, or Sandflesen, where the eddies are not so violent as elsewhere. Here we used to remain until nearly time for slack-water again, when we weighed and made for home. We never set out upon this expedition without a steady side wind for going and coming—one that we felt sure would not fail us before our return—and we seldom made a miscalculation upon this point. Twice, during six years, we were forced to stay all night at anchor, on account of a dead calm, which is a rare thing indeed about here; and once we had to remain on the grounds nearly a week, starving to death, owing to a gale which blew up shortly after our arrival, and made the channel too boisterous to be thought of. Upon this occasion we should have been driven out to sea in spite of everything (for the whirlpools threw us round and round so violently, that, at length, we fouled our anchor and dragged it), if it had not been that we drifted into one of the innumerable cross-currents—here to-day and gone to-morrow—which drove us under the lee of Flimen, where, by good luck, we brought up.

"I could not tell you the twentieth part of the difficulties we encountered 'on the ground'—it is a bad spot to be in, even in good weather, but we make shift always to run the gauntlet of the Moskoe-strom itself without accident; although at times my heart has been in my mouth when we happened to be a minute or so behind or before the slack. The wind sometimes was not as strong as we thought it at starting, and then we made rather less way than we could wish, while the current rendered the smack unmanageable. My eldest brother had a son eighteen years old, and I had two stout boys of my own. These would have been of great assistance at such times, in using the sweeps, as well as afterward in fishing; but, somehow, although we run the risk ourselves, we had not the heart to let the young ones get into the danger—for, after all said and done, it *was* a horrible danger, and that is the truth.

"It is now within a few days of three years since what I am going to tell you occurred. It was on the 10th of July, 18—, a day which the people of this part of the world will never forget—for it was one in which blew the most terrible hurricane that ever came out of the heavens. And yet all the morning, and indeed until late in the afternoon, there was a gentle and steady breeze from the south-west, while the sun shone brightly, so that the oldest seaman among us could not have foreseen what was to follow.

"The three of us—my two brothers and myself—had crossed over to the islands about two o'clock, P. M., and soon nearly loaded the smack with fine fish, which, we all remarked, were more plenty that day than we had ever known them. It was just seven, *by my watch*, when we weighed and started for home, so as to make the worst of the Strom at slack water, which we knew would be at eight.

"We set out with a fresh wind on our starboard quarter, and for some time spanked along at a great rate, never dreaming of danger, for indeed we saw not the slightest reason to apprehend it. All at once we were taken aback by a breeze from over Helseggen. This was most unusual—something that had never happened to us before—and I began to feel a little uneasy, without exactly knowing why. We put the boat on the wind, but could make no headway at all for the eddies, and I was upon the point of proposing to return to the anchorage, when, looking astern, we saw the whole horizon covered with a singular copper-colored cloud that rose with the most amazing velocity.

"In the meantime the breeze that had headed us off fell away, and we were dead becalmed, drifting about in every direction. This state of things, however, did not last long enough to give us time to think about it. In less than a minute the storm was upon us—in less than two the sky was entirely overcast—and what with this and the driving spray, it became suddenly so dark that we could not see each other in the smack.

"Such a hurricane as then blew it is folly to attempt describing. The oldest seaman in Norway never experienced anything like it. We had let our sails go by the run before it cleverly took us; but, at the first puff, both our masts went by the board as if they had been sawed off—the mainmast taking with it my youngest brother, who had lashed himself to it for safety.

"Our boat was the lightest feather of a thing that ever sat upon water. It had a complete flush deck, with only a small hatch near the bow, and this hatch it had always been our custom to batten down when about to cross the Strom, by way of precaution against the chopping seas. But for this circumstance we should have foundered at once—for we lay entirely buried for some moments. How my elder brother escaped destruction I cannot say, for I never had an opportunity of ascertaining. For my part, as soon as I had let the foresail run, I threw myself flat on deck, with my feet against the narrow gunwale of the bow, and with my hands grasping a ring-bolt near the foot of the foremast. It was mere instinct that prompted me to do this—which was undoubtedly the very best thing I could have done—for I was too much flurried to think.

"For some moments we were completely deluged, as I say, and all this time I held my breath, and clung to the bolt. When I could stand it no longer I raised myself upon my knees, still keeping hold with my hands, and thus got my head clear. Presently our little boat gave herself a shake, just as a dog does in coming out of the water, and thus rid herself, in some measure, of the seas. I was now trying to get the better of the stupor that had come over me, and to collect my senses so as to see what was to be done, when I felt somebody grasp my arm. It was my elder brother, and my heart leaped with joy, for I had made sure that he was overboard—but the next moment all this joy was turned into horror—for he put his mouth close to my ear, and screamed out the word '*Moskoestrom!*'

"No one ever will know what my feelings were at that moment. I shook from head to foot as if I had had the most violent fit of the ague. I knew what he meant by that word well enough; I knew what he wished to make me understand. With the wind that now drove us on, we were bound for the whirl of the Strom, and nothing could save us!

"You perceive that in crossing the Strom *channel*, we always went a long way up above the whirl, even in the calmest weather, and then had to wait and watch carefully for the slack—but now we were driving right upon the pool itself, and in such a hurricane as this! 'To be sure,' I thought, 'we shall get there just about the slack—there is some little hope in that'—but in the next moment I cursed myself for being so great a fool as to dream of hope at all. I knew very well that we were doomed, had we been ten times a ninety-gun ship.

"By this time the first fury of the tempest had spent itself, or perhaps we did not feel it so much, as we scudded before it, but at all events the seas, which at first had been kept down by the wind, and lay flat and frothing, now got up into absolute mountains. A singular change, too, had come over the heavens. Around in

every direction it was still as black as pitch, but clearly overhead there burst out, all at once, a circular rift of clear sky—as clear as I ever saw, and of a deep bright blue—and through it there blazed forth the full moon with a luster that I never before knew her to wear. She lit up everything about us with the greatest distinctness—but, Oh, God, what a scene it was to light up!

"I now made one or two attempts to speak to my brother, but in some manner which I could not understand, the din had so increased that I could not make him hear a single work, although I screamed at the top of my voice in his ear. Presently he shook his head, looking as pale as death, and held up one of his fingers, as if to say *'listen!'*

"At first I could not make out what he meant—but soon a hideous thought flashed upon me. I dragged my watch from its fob. It was not going. I glanced at its face by the moonlight, and then burst into tears as I flung it far away into the ocean. *It had run down at seven o'clock! We were behind the time of the slack, and the whirl of the Strom was in full fury!*

"When a boat is well built, properly trimmed, and not deep laden, the waves in a strong gale, when she is going large, seem always to slip from beneath her—which appears very strange to a landsman—and this is what is called *riding*, in sea phrase.

"Well, so far we had ridden the swells very cleverly; but presently a gigantic sea happened to take us right under the counter, and bore us with it as it rose—up—up—as if into the sky. I would not have believed that any wave could rise so high. And then down we came with a sweep, a slide, and a plunge, that made me feel sick and dizzy, as if I was falling from some lofty mountain-top in a dream. But while we were up I had thrown a quick glance around—and that one glance was all sufficient. I saw our exact position in an instant. The Moskoe-strom whirlpool was about a quarter of a mile dead ahead—but no more like the every-day Moskoe-strom, than the whirl as you now see it, is like a mill-race. If I had not known where we were, and what we had to expect, I should not have recognized the place at all. As it was, I voluntarily closed my eyes in horror. The lids clenched themselves together as if in a spasm.

"It could not have been more than two minutes afterward until we suddenly felt the waves subside, and were enveloped in foam. The boat made a sharp half turn to larboard, and then shot off in its new direction like a thunderbolt. At the same moment the roaring noise of the water was completely drowned in a kind of shrill shriek—such a sound as you might imagine given out by the water-pipes of many thousand steam vessels, letting off their steam all together. We were now in the belt of surf that always surrounds the whirl; and I thought, of course, that another moment would plunge us into the abyss—down which we could only see indistinctly on account of the amazing velocity with which we were borne along. The boat did not seem to sink into the water at all, but to skim like an air-bubble upon the surface of the surge. Her starboard side was next the whirl, and on the larboard arose the world of ocean we had left. It stood like a huge writhing wall between us and the horizon.

"It may appear strange, but now, when we were in the very jaws of the gulf, I felt more composed than when we were only approaching it. Having made up my mind to hope no more, I got rid of a great deal of that terror which unmanned me at first. I supposed it was despair that strung my nerves.

"It may look like boasting—but what I tell you is truth—I began to reflect how magnificent a thing it was to die in such a manner, and how foolish it was in me to think of so paltry a consideration as my own individual life, in view of so wonderful a manifestation of God's power. I do believe that I blushed with shame when this idea crossed my mind. After a little while I became possessed with the keenest curiosity about the whirl itself. I positively felt a *wish* to explore its depths, even at the sacrifice I was going to make; and my principal grief was that I should never be able to tell my old companions on shore about the mysteries I should see. These, no doubt, were singular fancies to occupy a man's mind in such extremity—and I have often thought since, that the revolutions of the boat around the pool might have rendered me a little light-headed.

"There was another circumstance which tended to restore my self-possession; and this was the cessation of the wind, which could not reach us in our present situation—for, as you saw yourself, the belt of surf is considerably lower than the general bed of the ocean, and this latter now towered above us, a high, black, mountainous ridge. If you have never been at sea in a heavy gale, you can form no idea of the confusion of mind occasioned by the wind and spray together. They blind, deafen and strangle you, and take away all power of action or reflection. But we are now, in a great measure, rid of these annoyances—just as death-condemned felons in prison are allowed petty indulgences, forbidden them while their doom is yet uncertain.

"How often we made the circuit of the belt it is impossible to say. We careened round and round for perhaps an hour, flying rather than floating, getting gradually more and more into the middle of the surge, and then nearer and nearer to its horrible inner edge. All this time I had never let go of the ring-bolt. My brother was at the stern, holding on to a small empty water-cask which had been securely lashed under the coop of the counter, and was the only thing on deck that had not been swept overboard when the gale first took us. As we approached the brink of the pit he let go his hold upon this, and made for the ring, from which, in the agony of his terror, he endeavored to force my hands, as it was not large enough to afford us both a secure grasp. I never felt deeper grief than when I saw him attempt this act, although I knew he was a madman when he did it—a raving maniac through sheer fright. I did not care, however, to contest the point with him. I knew it could make no difference whether either of us held on at all; so I let him have the bolt, and went astern to the cask. This there was no great difficulty in doing; for the smack went round steadily enough, and upon an even keel—only swaying to and fro, with the immense sweeps and swelters of the whirl. Scarcely had I secured myself in my new position, when we gave a wild lurch to starboard, and rushed headlong into the abyss. I muttered a hurried prayer to God, and thought all was over.

"As I felt the sickening sweep of the descent, I had instinctively tightened my hold upon the barrel, and closed my eyes. For some seconds I dared not open them—while I expected instant destruction, and wondered that I was not already in my death-struggles with the water. But moment after moment elapsed. I still lived. The sense of falling had ceased; and the motion of the vessel seemed much as it had been before, while in the belt of foam, with the exception that she now lay more along. I took courage and looked once again upon the scene.

"Never shall I forget the sensation of awe, horror and admiration with which I gazed about me. The boat appeared to be hanging, as if by magic, midway down, upon the interior surface of a funnel vast in circumference, prodigious in depth, and whose perfectly smooth sides might have been mistaken for ebony, but for the bewildering rapidity with which they spun round, and for the gleaming and ghastly radiance they shot forth, as the rays of the full moon, from that circular rift amid the clouds which I have already described, streamed in a flood of golden glory along the black walls, and far away down into the inmost recesses of the abyss.

"At first I was too much confused to observe anything accurately. The general burst of terrific grandeur was all that I beheld. When I recovered myself a little, however, my gaze fell instinctively downward. In this direction I was able to obtain an unobstructed view, from the manner in which the smack hung on the inclined surface of the pool. She was quite upon an even keel—that is to say, her deck lay in a plane parallel with that of the water—but this latter sloped at an angle of more than forty-five degrees, so that we seemed to be lying upon our beam-ends. I could not help observing, nevertheless, that I had scarcely more difficulty in maintaining my hold and footing in this situation, than if we had been upon a dead level; and this, I suppose, was owing to the speed at which we revolved.

"The rays of the moon seemed to search the very bottom of the profound gulf; but still I could make out nothing distinctly, on account of a thick mist in which everything there was enveloped, and over which there hung a magnificent rainbow, like that narrow and tottering bridge which Musselmen say is the only pathway between Time and Eternity. The mist, or spray, was no doubt occasioned by the clashing of the great walls of the funnel, as they all met together at the bottom—but the yell that went up to the heavens from out of that mist, I dare not attempt to describe.

"Our first slide into the abyss itself from the belt of foam above, had carried us to a great distance down the slope; but our further descent was by no means proportionate. Round and round we swept—not with any uniform movement—but in dizzying swings and jerks, that sent us sometimes only a few hundred yards—sometimes nearly the complete circuit of the whirl. Our progress downward, at each revolution, was slow, but very perceptible.

"Looking about me upon the wide waste of liquid ebony on which we were thus borne, I perceived that our boat was not the only object in the embrace of the whirl. Both above and below us were visible fragments of vessels, large masses of building timber and trunks of trees, with many smaller articles, such as pieces of house furniture, broken boxes, barrels and staves. I have already described the unnatural curiosity which had taken the place of my original terrors. It appeared to grow upon me as I drew nearer and nearer to my dreadful doom. I now began to watch, with a strange interest, the numerous things that floated in our company. I *must* have been delirious—for I even sought *amusement* in speculating upon the relative velocities of their several descents toward the foam below. 'This fir tree,' I found myself at one time saying, 'will certainly be the next thing that takes the awful plunge and disappears,' and then I was disappointed to find that the wreck of a Dutch merchant ship overtook it and went down before. At length, after making several guesses of this nature, and being deceived in all—this fact—the fact of my invariable miscalculation—set upon me a train of reflection that made my limbs again tremble, and my heart beat heavily at once.

"It was not a new terror that thus affected me, but the dawn of a more exciting *hope*. This hope arose partly from memory, and partly from present observation. I called to mind the great variety of buoyant matter that strewed the coast of Lofoden, having been absorbed and then thrown forth by the Moskoe-strom. By far the greater number of the articles were shattered in the most extraordinary way—so chafed and roughened as to have the appearance of being stuck full of splinters—but then I distinctly recollected that there were *some* of them which were not disfigured at all. Now I could not account for this difference except by supposing that the roughened fragments were the only ones that had been completely *absorbed*—that the others had entered the whirl at so late a period of the tide, or, from some reason, had descended so slowly after entering, that they did not reach the bottom before the turn of the flood came, or of the ebb, as the case may be. I conceived it possible, in either instance, that they might thus be whirled up again to the level of the ocean, without undergoing the fate of those which had been drawn in more early or absorbed more rapidly. I made, also, three important observations. The first was, that, as a general rule, the larger the bodies were, the more rapid their descent; the second, that, between two masses of equal extent, the one spherical, and the other *of any other shape*, the superiority in speed of descent was with the sphere; the third, that, between two masses of equal size, the one cylindrical, and the other of any other shape, the cylinder was absorbed the more slowly. Since my escape I have had several conversations on this subject with an old schoolmaster of the district; and it was from him that I learned the use of the words 'cylinder' and 'sphere.' He explained to me—although I have forgotten the explanation—how what I observed was, in fact, the natural consequence of the forms of the floating fragments, and showed me how it happened, that a cylinder, swimming in a vortex, offered more resistance to its suction, and was drawn in with greater difficulty than an equally bulky body, of any form whatever.

"There was one startling circumstance which went a great way in enforcing these observations, and rendering me anxious to turn them to account, and this was that, at every revolution, we passed something like a barrel, or else the yard or a mast of a vessel, while many of these things, which had been on our level when I first opened my eyes upon the wonders of the whirlpool, were now high up above us, and seemed to have moved but little from their original station.

"I no longer hesitated what to do. I resolved to lash myself securely to the water cask upon which I now held, to cut it loose from the counter, and to throw myself with it into the water. I attracted my brother's attention by signs, pointed to the floating barrels that came near us, and did everything in my power to make him understand what I was about to do. I thought at length that he comprehended my design, but, whether this was the case or not, he shook his head despairingly, and refused to move from his station by the ring-bolt. It was impossible to reach him; the emergency admitted of no delay; and so, with a bitter struggle, I resigned him to his fate, fastened myself to the cask by means of the lashings which secured it to the counter, and precipitated myself with it into the sea without another moment's hesitation.

"The result was precisely what I had hoped it might be. As it is myself who now tell you this tale—as you see that I *did* escape—and as you are already in possession of the mode in which this escape was effected, and must therefore anticipate all that I have further to say—I will bring my story quickly to conclusion. It might have been an hour, or thereabout, after my quitting the smack, when, having descended to a vast distance beneath me, it made three or four wild gyrations in rapid succession, and, bearing my loved brother with it, plunged headlong, at once and forever, into the chaos of foam below. The barrel to which I was attached sunk very little further than half the distance between the bottom of the gulf and the spot at which I leaped overboard, before a great change took place in the character of the whirlpool. The slope of the sides of the vast funnel became momently less and less steep. The gyrations of the whirl grew, gradually, less and less violent. By degrees, the froth and the rainbow disappeared, and the bottom of the gulf seemed slowly to uprise. The sky was clear, the winds had gone down, and the full moon was setting radiantly in the west, when I found myself on the surface of the ocean, in full view of the shores of Lofoden, and above the spot where the pool of the Moskoe-strom *had been*. It was the hour of the slack—but the sea still heaved in mountainous waves from the effects of the hurricane. I was borne violently into the channel of the Strom, and in a few minutes was hurried down the coast into the 'grounds' of the fishermen. A boat picked me up, exhausted from fatigue, and (now that the danger was removed) speechless from the memory of its horror. Those who drew me on board were my old mates and daily companions—but they knew me no more than they would have known a traveler from the spirit-land. My hair, which had been raven black the day before, was as white as you see it now. They say, too, that the whole expression of my countenance had changed. I told them my story—they did not believe it. I now tell it to *you*—and I can scarcely expect you to put more faith in it than did the merry fishermen of Lofoden."

QUACKERY.—Dr. F——, a physician of Montpelier, was in the habit of employing a very ingenious artifice. When he came to a town where he was not known, he pretended to have lost his dog, and ordered the public crier to offer, with beat of drum, a reward of twenty-five louis to whoever should bring it to him. The crier took care to mention all the titles and academic honors of the doctor as well as his place of residence. He soon became the talk of the town. "Do you know," says one, "that a famous physician has come here, a very clever fellow; he must be very rich, for he offers twenty-five louis for finding his dog." The dog was not found, but patients were.

BUSINESS CARDS.

C. S. HOBBS. G. W. GILMORE. S. D. GILMORE.
PREMIUM BOX FACTORY.
San Francisco Planing and Sawing Mills,
HOBBS, GILMORE & CO., PROPRIETORS,

To be a Man in this World!
YOU MUST OBSERVE
TWO VERY IMPORTANT MAXIMS!!
FIRST, THAT
"Economy is the only sure Road to Wealth;"
SECOND, THAT
"Early to Bed and early to Rise."
You all know what that does for a man.
By the by, speaking of Economy, Beds, Early Rising, &c., reminds us of these magnificent **Patent French Spring Beds,** AND THE
EXTRAORDINARY REDUCTION
IN THE
PRICE OF LODGINGS!
AT
Woodward's What Cheer House,
119 and 121 Sacramento street,
87, 89 and 91 (new addition) Leidesdorff street.
Lodgings, per night.....50 and 75 cents.
Lodgings in first class single rooms, furnished complete, per night.....75 cent
If you cherish the least feeling of regard for the pressing wants of the "inner man," the exceeding low price of board at this establishment must convince you that this is the place.
Meals, each.....50 cents.
Board, per day.....$1 00
Board, per week.....6 00
In order to furnish food for the mind, there is a splendid READING ROOM, abundantly supplied with Papers, Periodicals, &c., from all parts. There is also an extensive Library of Choice Works.
☞ FREE BATHS. ☜
In short, everything calculated to promote man's comfort can be procured at the What Cheer House, 119 and 121 Sacramento street—situated in the very center of business. It is also directly opposite the Mail Steamship Company's Office, and in the immediate vicinity of the United States Branch Mint.
R. B. WOODWARD, Proprietor.
N. B.—This House is conducted on strictly temperance principles. v6-21 tf

Estudillo House,
SAN LEANDRO, Alameda County.
THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.
To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.
San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.
The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

The California Farmer.

SAN FRANCISCO, FRIDAY, MAY 8, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

Letters and Exchanges.

Our correspondents are kindly requested to direct all letters to us at our principal office, San Francisco.

Those journals and periodicals with whom we exchange will much oblige us if they will be particular to note this, so that we may be in receipt of their favors at the earliest date.

Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco.

The Mechanics' Fair.

We have no language sufficiently expressive to testify the pleasure we feel in announcing to our readers the completion of plans which will soon show the rapid advance which our State is making in all that relates to Manufactures, Mechanic Arts, Artistic Skill, and the Productions of our Soil and Climate.

We have the satisfaction of presenting to our readers the circular of the Mechanics' Institute of San Francisco, with the call which they make upon all the mechanics and artisans of the State, and all the producers of every kind to unite with them in their proposed Exhibition in September next. It is designed to have a Mechanics' Fair, the particulars of which are set forth in the accompanying circular, and we have no doubt, from the character of the men engaged in this work, that it will be one of the most interesting, beautiful, and gratifying exhibitions ever held on the Pacific Coast.

To the Mechanics of California the appeal is now made. Shall it be made in vain? Will the Mechanics of the Pacific Coast see their own labor slighted, and foreign products come in to compete with their labor, and not make one effort to defeat it and bring their own manufactures before the notice of the community? If the Mechanics of California will but unite to make this exhibition what it can be made, we shall see at once the influence it will have in building up the interests of the workingmen, by checking the importation of foreign products, which has been so destructive to all home labor. We hope for an interest in the entire State that shall be equivalent to a fortune to every man, woman and child in the State.

The Crops of Grain and Fruits.

In passing from Marysville up the river banks to Oroville, and from thence across to Penee Valley, to Hamilton, Bidwell's and various other places, and back to Marysville and to Sacramento, a circuit of some five hundred miles, we have carefully observed the crops of Grain and Fruit, and we believe there is no cause for alarm or fear that we shall *starve*. These facts we have invariably found to be true: wherever due attention has been paid to the preparation of the ground for the crops; wherever trees have been properly planted and cared for—there will be no lack at harvest time. There are complaints, loud and deep; but when we visit such places, we find the grain was planted upon soil plowed four, six, or eight inches deep, and late, too; in some cases merely a scratching of the ground; and can *such* cultivators expect a harvest? "As a man sows, so shall he reap;" "if he sows sparingly, he shall reap sparingly;" and we hold *that* means, if he *cultivates* sparingly he will *harvest* sparingly! Again, wherever we have met the wise and judicious cultivator, the farmer who remembers that our *summer* is the period of time designed by nature for the *rest* of our native trees and all vegetation, and that what we do in summer, or the crops we expect to harvest at this period of rest, should be grown and cultivated with reference to such a season; wherever we find thinking, reflecting men acting in reference to these laws, we find the earth subsoiled, fallowed, prepared expressly for crops out of the accustomed season in this climate, and having been thus prepared, thus fortified, these crops are planted deeper, upon deeper soil, and they resist the drought; and though the labor and cost are greater in the outset. They know well

That whatever is worth doing, is worth doing well;
That the deepest turned furrows are surest to tell;
That the work that is worthy the most labor and cost,
When the harvest day comes, was not labor lost.

And thus we find at the present season on some farms crops in full vigor, a rich dark-green blade, heavy stalk, and giving sure promise of forty, fifty, and even sixty bushels to the acre; and we find, also, near by, the old system of imitative plowing; and there little or no prospect of a harvest. With such cultivators we have little sympathy—for "they have eyes but see not, and ears but hear not," and they will not seem to understand that nature has laws that must be observed.

It is true, that farmers of several years are apt to *hope* for rain and trust to luck, when they should *labor*; this great error, in a climate like ours, may disappoint many the present season, but we trust it will induce them to practice better another season. We have no fear as to the general crop of the State; some portions must be short, but others will exceed the last year. We believe there is a large surplus of the present year, and ample for the coming year—and it is very unwise to cry *short crops*. There are already plenty of interested speculators to keep such a cry echoing, and our people should be wary of such men. Even should our crop come short at harvest, far better would it be for our State and our own people to receive the full value of the rise, than for our markets to be glutted by shipments from abroad by a too hasty move of the greedy speculators.

As the grain fields are affected by half cultivation, so we find orchards suffer also, and thousands of fruit trees perish every year by that miserable economy that buys cheap trash at auction, and then plants it. We can see how injurious such examples are in a community, for the unsuccessful cultivator is a hindrance to others; his example deters others, and thus the whole State is kept back in improvement.

Wool Statistics.

Growers of wool in California can look forward with a confident hope of success in the enterprise, from those facts already matters of history, that the increase of this product does not decrease the demand for the article, or its value in market, but rather enhances both.

By a reference to the great wool producing country, Australia, not a pound of wool was *exported* from there in 1834, but the last year gives the enormous amount of eighteen million pounds, equal to nine thousand tuns—the loading of nine clipper ships of one thousand tuns each. Here is an example for Californians to imitate, and we believe she will make the attempt, and accomplish it, too, before half the time it has taken Australia to do it.

Correction.—In our last issue we gave an account of the shearing of the fine sheep of Messrs. Searle & Wynn—the amount taken from them was the *growth* of *nine months* only, instead of one year; thus showing a much heavier fleece than as stated.

Sheep Raising.—We find in traveling over the State a very satisfactory assurance of the statements we have made in advance upon this subject, for wherever we go, in almost every section of country, we meet fine flocks of sheep, and also the plans for the introduction of flocks of the pure breeds. We know of many flocks that will be brought to this country from Australia, from Europe, and from the State of Vermont, also. These are gratifying facts, and the result will be highly beneficial to the country.

We learn also of an increased interest to improve all kinds of stock, and a greater desire to awaken attention to County Exhibitions of Stock. This we deem of the highest moment to the prosperity of stock breeders, as well as all others interested in agricultural pursuits.

Messrs. Searle & Wynn, who were the importers of those splendid sheep alluded to above, have now a flock of 1800 Mexican sheep, crossed with the Shanghais or flat tailed species; from these they have 500 lambs of the cross breed. They have also 1000 of the finest American ewes; from them they have 825 lambs, pure American; these sheep are to be crossed by their late imported breed, and from which is anticipated a new and valuable variety, both in form, character, and quality of wool. Messrs. Searle & Wynn most fortunately have had two fine buck lambs from their newly imported ewes—these are a valuable acquisition to the stock already here.

California Coal Company.

During the week that we were at Oroville, after visiting the quartz mills of Smith & Sparks, we left Oroville to cross the plains and examine the crops, thence to Bidwell's Ranch, through one of the finest tracts of land in our State. The first place of interest upon our route, after leaving Thompson's Flat and the gold diggings there, was the California Coal Company's works, where we had an opportunity to learn from ocular demonstration, of the existence of coal, its quality and quantity, and the progress already made. These matters are of vast importance to our State.

The Company's coal vein is situated about seven miles from Oroville, upon a group of hills. As our journey was in the saddle, we had an opportunity to notice the means of access to the mines, and the facilities a company would have of conveying coal to market. We found the locality of the mines very well adapted for a railroad thence to Oroville, and thus, with little cost, coal could be sent to Marysville, Sacramento and San Francisco. Fortunately we found the Board of Directors holding a meeting at the mines, and thus we were enabled to obtain valuable information on the spot.

The California Company commenced tunneling about two years since, and after prospecting carefully laid their plans; and, at the present time, their tunnels for drainage extend over 600 feet into the mountain, connecting with their best leads, which now extend over 500 feet in the veins from which they are mining a very excellent quality of coal, although we do not think they have yet struck the best veins by any means. We saw, at several places, samples of their coal in use, burning freely and giving evidence of good quality. The Company have several buildings already erected. The Coal Depot contains some 200 tuns coal, ready for market, which brings $16 per tun at Oroville. The Company have expended about $50,000. What is now wanted for this enterprise is more capital, to build a railroad to Oroville, and measures adopted to open deeper into the mountains, and obtain richer veins. This company is now organized fully, and the following are the officers: L. C. Hammond, President; J. C. Yudell, Secretary; T. S. Warden, Treasurer; J. F. Martin, J. Chittle, Directors of Mines.

The Season in Alameda County.

In a letter received from our friend Mr. Abram Clark, of Washington, Alameda county, dated May 6th, he thus speaks of the state of the crops in that section:

Our grain crops just about here are suffering somewhat for want of rain. My wheat that I sowed on ground that has had wheat on it for three years in succession is about "gone in;" that which I sowed right adjoining, and at the same time, had beans and potatoes on it last year, and looks first-rate at present—just beginning to head; but if we get no more rain soon, I fear the heads will be short. My barley, fifty acres, is all volunteer, and looks well, and I believe is out of the way of the drought; it is ripening rather faster than I would like it, to make plump grain.

Continuation of Trip Up River.

St. Nicholas Hotel, Oroville.

Having spent a week in the vicinity of the new mining city of Oroville, we are prepared to speak of this hotel as we believe it truly deserves. It is one thing to keep, or be the proprietor of a hotel, and quite another to superintend one; and the few hotels in California that are truly superintended by the proprietors are those that are numbered among the prosperous ones. The St. Nicholas Hotel of Oroville is truly a business hotel, and a stranger would be surprised at the amount of business transacted at a hotel in so new a city; but when we recollect that the proprietor is Frank Johnson, a gentleman so long and favorably known as the clerk of the favorite steamer Gov. Dana, we need not longer wonder that the up-river trade would naturally go some distance out of the way to find a home at a hotel under the care of their friend Johnson.

Our stay at Oroville gave us an opportunity of proving this hotel to be one of the best conducted in our State. Frank Johnson himself is always at his post, and aided by his most courteous clerk Mr. Hayden, and that excellent caterer to the appetite Dr. Eggary, formerly steward of steamer Senator, the traveler is sure to be well cared for. Few hotels on the Pacific coast are managed so well as the St. Nicholas; large, commodious, excellent rooms, a well provided table, with attentive stewards, and every comfort and convenience—these secure a popularity not often accorded to a public hotel, which in this instance is well deserved by our enterprising friend Frank Johnson, to whom we commend the traveling public.

The Saw-Mills of Oroville.

Among the many large and valuable saw-mills of California, of which there are so many that we have examined, few that we have ever seen will compare with the large and extensive mills at Oroville, built and established by one of her most enterprising citizens, G. W. Garrett, Esq., to whose indomitable energy and perseverance this new city is largely indebted for the rapid advance she has made. To Mr. Garrett should be accorded her credit for building and establishing a valuable reservoir of water upon the high grounds above the city; by which means the city can be supplied with water, in any quantity, to the tops of the highest buildings; a resource and a security which should be at once adopted and appreciated by all the people of Oroville.

But to the saw-mills which we named. The mills occupy a very large space, an acre of ground or more; the machinery is carried by a fine steam-engine of 20-horse power; this engine, besides moving all the machinery of the saw-mill, carries a planing-mill, a tongue and grooving machine, a lath-mill, a pump-log boring machine, and draws the logs from the river below, and is also used to pump the water to the great reservoir upon the hill which supplies the city with water. This mill turns out about 10,000 feet of best lumber per day, and gives steady employment to some fifteen hands. The fuel used in the engine is sawdust only, made at the mill, besides which sawdust is sold in quantities. The mill even doing its best cannot supply the demand for the lumber called for.

A wise and judicious system of labor in all departments is observed—a regularity in the performance of labor; so that all moves on in harmony. This is owing to the liberality of the proprietor, and the most excellent management of his skillful agent and superintendent, J. E. Emerson, Esq., whose interests, sympathies and scientific acquirements are fully devoted to the mill. As an evidence of this, we were deeply interested in the new and valuable improvement made in the large saw used at the mill. This saw is one of the largest size; being sixteen feet in circumference, and instead of the regular cut teeth, it has but seven teeth in the plate, and these are inserted or let into the plate at equal distances; these can be taken out at will, changed, sharpened, &c., and thus retain the full size of the saw; whereas, in the former kinds of saws, the sharpening of the saw gradually reduced the size of the plate. With this most valuable improvement only *half* the power is required; the saw runs easier, performs its work better, and is less liable to get out of repair. We saw logs of thirty feet circumference on the ground ready for use, and we learn that often the logs turn out 500 feet each of the best lumber. The great saw performs 350 revolutions per minute; so easy and perfect are the movements of the machinery that the engine has power to spare. The sawdust and waste of the mill produces about $20 per day—a very pretty income of $6000 dollars per year. Mr. Garrett deserves great praise for his very laudable public spirit in thus establishing a mechanics' laboratory, to give steady employment to many workingmen, and also for his general enterprise in all that tends to build up Oroville. We were also much pleased with the attention and activity of the workmen in all departments.

Lime at Oroville.

A handsome source of income is derived to Oroville from the almost inexhaustible supply of limestone, which is converted into the very best lime. This is sold by Wm. Groynu, Esq., of Oroville and Marysville, agent of the company's enterprise. To show the growth of home industry, last year there were 5000 casks lime sold; the present year, 20,000 casks.

A Knowing Dog.

We were much interested in a very intelligent dog that accompanied a friend from Sacramento recently. We were informed that the dog often accompanied friends from Sacramento to the Bay City, and after spending a day or two would go aboard the steamer, of his own accord, and return to his home in Sacramento. This he has done many times.

The Mineral Resources of Oroville.

While we were in the vicinity of Oroville we took some pains to examine into the almost fabulous stories we had heard of the amount of gold found in this region, as it would seem by the name given to the city that it was a villa of gold; and it would seem almost true. We visited Thompson's Flat, the river and gulch washings, the tunnels and coyote diggings, and go where we would, gold, gold, gold was everywhere in the soil, and we believe that "the half has not been told." We believe that new efforts, new plans and new inventions in mining will yet reveal far richer diggings than have ever yet been discovered. Water seems to be the pre-requisite now for further discoveries—all the old plans of obtaining which are in use, and a general success attends the labors of the miners. We were much pleased with their active and industrious habits, and we must say we have never seen so many miners gathered in one place where so remarkable good behavior and order prevailed. We never saw a miner under the influence of liquor in all our rambles in that section, and we saw thousands of miners. The immense tract of gold land along this section of country is destitute of water, other than the reservoir of the Water Company's works; and we are surprised that the plan of Artesian wells has not been started. We have faith to believe that Artesian wells will be found of great service, and unfold vast riches to this section of country.

By the courteous attention of Mr. Smith, of the rich quartz company of Smith, Parks & Co., we were invited to visit their mills, in company with mine host of the St. Nicholas, "Caxton" (whom happily we found in these golden fields), and some other friends. We took to the saddle, and quickly sped over the golden earth, up hill, down dell, up mountain and across valley, and after a circuit of some seven or eight miles of rich and pleasant country we came to the "stamping" grounds of the fortunate company, and here it almost seems as if whatever they touch becomes gold. Messrs. Smith, Parks & Co. have the fortune within their grasp; and although their machinery is not of the best yet introduced, yet the gold rolls out in abundance. They have twelve stamps, of which only eight were in use. Teams loaded with the rough quartz, and with a species of black marl came to the mills; the stamps were at their work, kept in motion by the immense water-wheel of some thirty feet in diameter, and the pulverized material ran in sparkling sand into the receiver below; when through this wash, it was passed into the cleaners, thence into the amalgamator, and, from the week's labor, four, six or eight thousand dollars would be the result. Often the *waste* of the mill, taken from the sluices and ground over, would amount to from two to four thousand dollars per week, and when the new machinery, in contemplation, shall be erected, it would not be surprising to hear of ten, fifteen or twenty thousand dollars per week. If this is not gold mining to some purpose we do not know what is.

Highly gratified and instructed by our visit, and grateful for the kind attention and courtesy of Messrs. Smith & Parks, and very grateful for handsome specimens, and a generous parcel of the fine dust, we can only say we shall convert a portion into a ring commemorative of the occasion, and feel that the liberality of our friends will not be lost, for we ever believe the liberal heart will be made rich. We are also grateful for the kind interest manifested for our journal and the enterprise.

The Rancherie.

This famous gold digging is on the opposite side of the Feather river from Oroville, and about three miles below, and is one of the busiest spots probably in all California, and probably the very noisiest—yet quietly industrious. At times it is like a large rookery, for the strange jabbering of about three thousand Chinamen creates a kind of hullaballo that makes it a very Babel, and yet these busy workers are fast getting rich.

Coal Mines near Oroville.—The California Coal Company, of which we have spoken, we believe will be a source of profit to the owners, and to all the sections around, if immediate measures could be taken to develop it fully. The vein now working is six feet in thickness; the working tunnel admirably constructed, heavily timbered and well drained; sufficiently so for years' working. The quality of the coal deserves notice. The company design to carry the coal to the Feather river, for shipment below, by a wooden railroad, as soon as necessary means can be raised. The lay of the ground is favorable, not more than about twenty feet inclination to the mile. The distance to the shipping point is seven miles. A railroad to this mine would increase the business of the steamers, and the trade of Oroville, as it would bring lime and building stone and other material into market, supply fuel for mills, stores, dwellings, steamers, etc. We esteem an enterprise of this kind one that should interest all the people in the vicinity of Oroville, as developing the resources of a country is the only way to make it permanently prosperous.

A scientific gentleman in exploring the tombs of ancient Gallic Kings, two years ago, discovered a species of wheat not at the time in existence, but which it is believed the ordinary wheat of France is only a degeneration of the ancient grain, deteriorated by centuries of reproduction. A considerable quantity of the wheat was sown on the government farm last fall, and great reports of its productiveness have been published. This important cereal discovery, it is expected will put France in possession of one-eighth more agricultural wealth than she could otherwise possibly possess.

An Adromatic Microscope, of great power and wonderful perfection, was recently made by an artist of this country for the Smithsonian Institute, Washington. Prof. Henry says it is equal to anything of the kind yet made in Europe.

Valuable Books Received.

The following valuable Books have been received, of late, from the several publishers, for which they have our sincere thanks. We may have spoken of some of them previously, but they are all worthy of being named and perused oftentimes:

Bridgeman's Gardeners' Assistant.—This book after having been successfully issued and passed through about twenty large editions, has now appeared in a new and improved edition, and reflects great credit upon the author and publishers, and this work should be in the hands of every cultivator of the soil. The book contains practical direction under each head for the cultivation of culinary vegetables and flowers, also directions for cultivating fruit trees, and grape vines. It will prove valuable here, with the simple fact, that our seasons being about three months in advance of the East, we should substitute January for April, and so on, in the seasons. Published by the Author.

Barry's Fruit Book.—This book also will be found valuable to fruit growers here, as it contains all the necessary practical illustrations touching the physiology of fruit trees, the theory and practice of all operations connected with their successful growth. This work contains one hundred and fifty illustrated cuts, and is worthy a wide circulation. Published by Scribner, Broadway, New York.

Village and Farm Cottages—A very beautiful collection of tasteful specimens of Architecture, drawn and designed by Cleaveland & Backus, Boston, and published in New York, by D. Appleton & Co. We most cheerfully commend this work to all who want "beautiful Homes."

Homes for the People—Another valuable work, published by Scribner, New York, designed and edited by Gervase Wheeler, Architect, author of Rural Homes. The design of this author is to present a new style of architecture for the people, and an easy way to alter and remodel old buildings. The work contains one hundred original designs. The book is worthy especial notice.

Porter's Chemistry—A valuable work, embracing the most recent discoveries in the science, and giving the outlines of its application to Agriculture and the Arts; the book is illustrated by numerous experiments, and newly adapted to the simplest apparatus. The work is edited by Dr. John A. Porter, M. A., and published by A. J. Barnes & Co., New York.

The Progressive Farmer.—This is a valuable work, being a series of Treatises upon Agricultural Chemistry, the geology of Agriculture, on plants, animals, manures and soils, as applied to Agriculture. The work is practical, and should be widely circulated. The book is from the hands of Prof. Nash, and published by C. M. Saxton & Co., New York.

Chorlton's Grape Grower's Guide—A valuable treatise; also issued by Saxton & Co.

How to Choose a Cow.—This is particularly valuable at this time in California, as it contains valuable hints by which one accustomed to stock can select with judgment. The work is descriptive of all the marks by which the milking qualities of a cow may be ascertained. The book has been carefully prepared by T. H. Mange, Esq., Prof. of the Veterinary school of Alfort. The work also contains a supplement of the Dairy Cattle of Great Britain, and illustrated with plates. The book is by Blackie & Sons, publishers, Edinburgh; published also in London, and also by their house in New York.

Agricultural Text Books for Schools.—We have received from the publishers the following most excellent Text Books, calculated to be introduced into schools. They were sent as sample books, to be presented to any committee appointed to act on this subject for schools; but the committee appointed at the Teacher's Convention, last year, to present this important subject to the Legislature, never having met for the purpose designed, we have had no opportunity to call that attention we desired. We are, however, in possession of the copies sent us by Messrs. C. M. Saxton & Co., and hope ere long that attention may be excited for so important a subject. The following works were sent us:

Waring's Elements of Agriculture;
Norton's Scientific Agriculture;
Catechism of Agricultural Chemistry and Geology;
Smith's Juvenile Definer.

All the above works are valuable publications, and worthy of perusal, and we hope they may yet be introduced into our schools.

The Vine Dresser's Manual.—A very valuable treatise on the vine, containing practical hints for all seasons of the year. By Charles Reemelin. Saxton & Co., publishers.

A Manual of Speaking, Conversation and Debating.—A most valuable work, and every young man and young woman in the land should have a copy. Published by Fowler & Wells, New York.

Railroad Report.—Annual Report of the Railroad Commissioners of the State of New York, from the Report of the Railroad Commissioners for the year 1855. This work was kindly sent us by Wm. Ed. Young, Esq. It is a valuable work of reference, showing the mighty influence of the railroad capital of the State of New York. The work is in two volumes, illustrated, and containing some 1500 pages.

State Agricultural Fair.—On Wednesday last, a meeting of the Executive Board was held at Stockton, at which a list of Premiums was prepared, and rules and regulations to govern the Fair were adopted, and the various Committees appointed. The Court House and Public Square were selected as the place for the Exhibition of the products of the soil, and of industry, at the next Fair.

Kind words are among the brightest flowers of earth; they convert the humblest home into a paradise: therefore use them, especially around the fireside circle.

May-Day.

O Beautiful, Beautiful May!

"Oh this is the beautiful month of May
The season of birds and of flowers
The young and the lovely are out and away
Mid the greenspringing grass and the blossoms, at play
And many a heart will be happy to day
In this beautiful region of ours"

"Yet, loveliest of months! with the praises I sing
Thy glories are passing away
With the dew on the blossom, the bird on the wing
Yet round thee a garland poetic I fling
Sweet sister of April! young child of the spring
O beautiful, beautiful May!"

Yes! many a heart was happy on the glad Festival of Flowers, from one end of the State to the other. Every city had its "May-Day Festivals." Sabbath and day schools, teachers and pupils, parents and children, pastor and flock—these in many places were the happy participants in scenes of rural pleasures; and we venture to say that such festive scenes will always have a tendency to strengthen social ties, improve the moral sentiment, and increase the sum total of human happiness.

Happy would we be if we could lay before our readers sketches of many of the happy gatherings on that festive day; but our columns could not contain a tithe of the record.

San Francisco sent forth thousands of her happiest faces, and they were seen going in all directions, with the bright tokens of Flora's smiles and favors. In Sacramento, Marysville, Stockton, Nevada, Placerville, Petaluma, Sonoma, Benicia, and in fact everywhere, the day was celebrated most joyfully.

We regret very much that *balloon machinery* was not perfected so that we could have accepted all the invitations sent us; but we could only join one festive scene—the "Sheep-shearing Festival" at Elk Grove, of which we give an account in another place.

We return our acknowledgements to Mr. Denman, of San Francisco, for a card of invitation to his festal scene, and to the Turn Verein's for their courtesy. Our friends of Petaluma, Sonoma, Sonsun, Benicia, and other festive scenes to which we were kindly invited to join—at all these places we hear of most happy results, and we rejoice to know it, and trust that California will always keep alive the glorious scenes of May-Day Festivals.

Oakland May Festival.

The following pleasing sketch of the Festival at Oakland has been kindly sent us, in accordance with the request in a late number of our paper; and we return our thanks to our attentive correspondent O. Such scenes as the one thus described have always been productive of good; and we know thousands of hearts were made happy on May-Day. We hope the pen of O. will not remain silent. He will always be welcome:

For some days past arrangements were being entered into sufficient to indicate that something in the near future was in preparation for the good citizens of Oakland; and no sooner had it become known that the young ladies attending the seminary of the Rev. Mr. Provost and lady intended celebrating May-Day, than a feeling of anticipated pleasure pervaded the whole community: knowing as they do the great care and industry bestowed on their pupils by that gentleman and his lady, enabled them to form the foregoing conclusions. This was clearly manifested to-day, for as early as 10 o'clock A. M., our community could be seen concentrating in a certain inclosure, situated on the corner of Tenth street and Broadway, at the north end of which the necessary arrangements were completed on the day previous. This consisted of a large platform, carpeted and otherwise handsomely decorated with tapestry and flowers above which and from an overhanging oak waved the stars and stripes, beautifully contrasting with the dark green foliage of the oak. A large space in front was also occupied with seats for the accommodation of the lady visitors, and every seat was occupied; and even the good and necessary things of this life were not neglected, for at the west end of the inclosure a range of tables was erected and covered with refreshments both for the pupils and their guests.

At half-past twelve o'clock the young ladies of the seminary entered the inclosure, accompanied by a band of music, and conducted by their respected guardian. As they ascended the platform the assembled multitude was dumb with admiration at the sight—even the boldest bachelor "held his breath for a time." And old "Sol," bachelor as he is, veiled his face by the passing cloud, as he had done on a late occasion, to his old lady-love—the moon—when she appeared before him in mid-day in the blue ethereal sky.

Such were the feelings of the lookers on as these human flowers passed over the platform into a tastefully formed floral bower. No sooner, however, had this fairy scene passed away, than the silent admiration found vent to its feelings. The proceedings of the day now commenced with dialogue and declamation, when each of the following young ladies—representatives of Flora—participated:

QUEEN FLORA.....MISS MULLEN.

Rose.....Miss Mesme.	Moss.....Miss N. Boardman.
Pink.....Miss Kittredge.	Grass.....Miss Dailey.
Violet.....Miss Mullen.	Bud.....{ Miss McKee. Miss Davis.
Lily.....Miss Reed.	Butterfly.....Miss Hinkle.
Daisy.....Miss Winn.	Nasturtium.....Miss Hardy.
Forget-me-not...Miss Schroder.	Wheat.....Miss G. Dailey.
Geranium...Miss H. Schroder.	Oats.....Miss F. Dailey.
Honeysuckle..Miss Van Houten.	
Lily of the Valley..Miss Boardman.	

Space, however, forbids us to enter into details, although each of the foregoing young ladies truly deserves a separate notice for the care and study bestowed on, and in, the delivery of their different parts. Besides, I would find it difficult to discriminate, as each and all were so happy in the selection of the parts, that no undue effort was necessary to strain them onward in the delivery. It may, however, be but justice to Miss Mullen, Miss Maben and Miss Dailey, to remark that their parts were so lengthy and varied that much time and study was necessary to render them so truthfully and pleasing as they had been done; also, the happy selection of Miss Mullen as Queen. The dignity and grace displayed by her majesty on the occasion threw a halo around the proceedings long to be remembered. It is but justice to the young gentlemen to notice their efforts, which were certainly creditable, and which were well appreciated by the audience.

The day's amusements were concluded with the merry dance on the green sward, around the May-Pole, beneath the shelter of our monarch oaks. All participated save poor old bachelordom, who was so crest-fallen with a pressure of old recollections, that he resembled an old shrub *wilted*, as if a gopher had been after gnawing his understanding. O.

N. B.—The greater number of the young ladies mentioned in the inclosed sheet were of an age verging upon womanhood, and probably it is their last May Day as *girls*, for Queen Flora (Miss Mullen) was married ere the exercises of the day closed. N. R.

Wells, Fargo & Co.'s Express.

As it is customary when there is no competition in any public enterprise, to pronounce it a monopoly, and as monopolies are always charged with three or four times as many errors as they are guilty of, and as it must be apparent to all candid minds that the accumulation of business in the hands of this one house must demand more than ordinary care, even *extraordinary exertions*, to prevent mistakes—we feel it an act of justice to this house to publish a card we found in one of their interior offices, to show that the heads of the house mean to do their duty.

This simple card speaks volumes, and as it cannot be expected that every agent or clerk will always be what they should, let justice be done to the deserving. Traveling as we do continually we are often placed under obligations to this house for favors; we are willing to overlook much in the hurry of business, when we know the intentions are right and true. To Mr. Tower, and the other messenger on the Sacramento, we have often been indebted for courtesies, for which we tender thanks. The following is the card alluded to, which has been sent to all the offices of this house:

OFFICE OF WELLS, FARGO & Co.,
San Francisco, April 8, 1857.

TO OUR AGENTS:

Now that we have no opposition, you will be careful in making charges on packages. Let your charges be rather under than over our usual rates.

We desire that you will be more than usually attentive to customers, and prevent, if possible, any complaint. WELLS, FARGO & Co.

OMITTED COPY LAST WEEK.—We very much regret that by the delay in not receiving at the office of publication the copy prepared for that number, the paper went to press without the usual notices prepared. We were far distant, and the nonreceipt of copy was beyond our control—it will be found in this number.

It is stated that it commenced snowing at the Columbus House, fifty miles from Marysville, early on the morning of the 6th, and it fell to the depth of 18 inches. At the Keystone Ranch, 26 miles from Marysville, considerable snow had fallen.

LONG DROUGHT.—The Mariposa Gazette of the 6th inst., says that there had been no rain in that place for thirty-nine days preceding that date—thermometer at eighty-two degrees, and no visible signs of a cessation of the drought.

THE Sonoma county Journal reports that the crops will average about two-thirds of that of last year.

TEHUANTEPEC MAIL ROUTE.—It is reported that as soon as practicable the Postmaster General General will change the route of the California mails, and send them by the way of Tehuantepec.

CITY TRADE REPORT—FRIDAY MORNING, MAY 8.
[From the Evening Bulletin.]

Flour—Sale of 200 bbls. Domestic, at $12, cash; 100 do do, at $12 75; 200 qr. sacks Santa Clara, at $13; 200 bbls. Haxall, private.

Wheat—Sale of 400 sacks, at 4¼c.

Barley—1500 bags sold at 2 a 2¼c.

Oats—Sale of 1000 bags, private; 125 do, at 2¼c., and 140 do, at 2⅜c.

Bran—Sale of 400 bags, at $29 per ton.

Corn Meal—Small jobbing sales of puncheons at $31 a $32, and bbls. at $8 75 a $9.

Potatoes—Sale of 200 bags, at 2c.

Butter—Sale of 64 firkins and 100 do (Hope's) private; and 34 cases Domestic, 10-lb tins, at 32c.

SPECIAL NOTICES.

☞ SIX REASONS WHY EVERYBODY USES LYON'S KATHAIRON:

1st. It is the *cheapest* preparation for the hair ever made.
2d. It is pronounced by all to be the *most beneficial*.
3d. It is the most *agreeable* to use.
4th. It is the *cleanest* and most *carefully prepared*.
5th. It is the most *highly perfumed*.
7th. It is the only article that never fails to give *entire satisfaction*.

The immense sale of the Kathairon—nearly 1,000,000 bottles per year—attest its excellence and universal popularity. Sold by all dealers, everywhere, for 25 cents per bottle.
HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers, San Francisco. 16 1m

☞ BEAUTIFUL GIFT.—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. L. W. WIRT, OF VIRGINIA.
For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.
WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

☞ JOSEPH GILLOTT'S STEEL PENS.—These popular Pens are to be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Thirty years' experience in the manufacture will, it is hoped, be a sufficient guarantee that every effort will be made to maintain the reputation of these articles. Those of *Standard Quality*, only, are allowed to issue from the Manufactory.

Each box contains a warrant, bearing a *fac simile* of Joseph Gillott's signature.
Manufacturer's Warehouse,
91 John street, New York.
HENRY OWEN, Agent. v7-15 3m

☞ WISTAR'S BALSAM OF WILD CHERRY,
The great remedy for CONSUMPTION and all other diseases of the Pulmonary Organs.

The greater the value of any discovery the higher it is held in the esteem of the public, and so much in proportion is that public liable to be imposed upon by the spurious imitations of ignorant, designing and dishonest men.

Now that this preparation is well known to be a more certain cure for incipient CONSUMPTION, ASTHMA, LIVER COMPLAINT, COUGHS, BRONCHITIS, and all similar affections, than any other remedy known, there are found those so villainously wicked as to concoct a spurious, and perhaps a poisonous mixture, and try to palm it off as the genuine Balsam.

This is to caution dealers and the public generally, against purchasing any other than that having the written signature of I. BUTTS *on the outside wrapper.*

Prepared only by Seth W. Fowle & Co., Boston, Mass., to whom all orders should be addressed, and for sale by their agents.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 15-1m

MELODIA.
A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

☞ READ—Copies of the Farmer for Mailing. That all may have an opportunity of sending the FARMER to their friends in the East, so as to make known the resources of California, we have
Reduced the price to Twelve and a-half Cents per Copy.
It will hereafter be found at the following places:
J. W. SULLIVAN, ULLMAN & Co., } Post Office Arcade.
HUTCHINGS & ROSENFIELD, Montgomery street.
At these places can also be found copies of the State Society's Reports. Price 50 cents.
The FARMER will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.
WARREN & CO., Editors and Proprietors.

BOOKS FOR GARDENERS.
JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ TO STOCK RAISERS.—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.
v7-10 WARREN & CO.

To Teamsters and Others.
PATENT ANTI-FRICTION AXLE GREASE.
THE season of internal communication with the mining district having opened, with a prospect of a large hauling business, the subscribers take the opportunity of thanking their numerous customers for the extensive patronage they have experienced for their
PATENT AXLE GREASE
during the last four years, and beg to say that no pains will be spared in its future manufacture to sustain it in the wide reputation it has acquired as the best lubricating medium for Coaches, Wagons, &c., ever introduced into California.
HUCKS & LAMBERT,
Inventors and Sole Manufacturers,
Mellus street, San Francisco.
NOTE.—One application of the Patent Grease will enable the heaviest teams to perform the longest journey, without requiring to be re-greased on the road; and further, as the Patent Grease works free from coomb or gum, the draft of the horse is very considerably lightened—a great desideratum in a long journey over a heavy road. v7-15 tf

To Farmers and Traders.
THE undersigned will pay the highest market prices, in Cash, on delivery, for California and Oregon *BUTTER, CHEESE, LARD, HAMS and BACON*. Large Dairies can make contracts for all they may make through the year, at the market price, when delivered, or otherwise, as may be agreed upon. Should any one feel disposed to consign to me, for sale on their account, any of the above articles, they can have very liberal *CASH* advances made on such consignments, and prompt returns. E. S. CROSS,
38 Commercial street, first store above Front,
San Francisco.
*** Refers to the Merchants on Front street generally. v7-9 3m

A Gardener at Shares.
AN excellent opportunity can be given to a good practical as well as scientific gardener, for a series of years. To a person who could command a moderate capital a chance will be given that is permanent, and certain of paying very handsomely.

None need apply unless they can produce the very best testimonials as to ability and character, and one who is free from embarrassment, and can answer the advertiser fully.

A note addressed to "B. C." through the FARMER Office, with real signature, will receive prompt attention. v7-5 tf

PERSIAN SHERBET,
An Effervescing Temperance Beverage.
The most Wholesome, Refreshing and Invigorating Drink in the World!

THE powder from which this is prepared is made entirely from vegetable ingredients collected from all parts of the world, and combined together with great skill and care. Two tea-spoonsful put into a dry tumbler of large size, with a sufficient quantity of water added, produces immediately a cooling draught of charming excellence and flavor, and health-giving effect; it is adapted to all seasons and every one's use, and is especially suited for those who go to sea, as a preventive of sickness, costiveness, and the generally unpleasant state of the system arising from change of climate and living. It also lessens the dangers of incurring diseases under a tropical sun, and all who are about to take a trip to the Eastern States, if they regard health, ease and comfort on the way, should not fail to obtain a supply before starting, and more so, if ladies or children are with them; or invalids or the sick, as nothing is as grateful to the palate and stomach as this, and resists the enervating effects of hot countries so well; and, unlike ardent spirits, it does not enfeeble by inflaming, but strengthens and exhilirates both body and mind by its nutritious powers and the energy which it imparts to the digestive process: so, too, should seamen be provided with some before they leave the port—

"Those gallant men and glorious sons of toil,
Who brave the dangerous deep to guard their native soil,
And with daring hands the white wings of Commerce spread,
To bless the world and to earn their bread."

A glass taken at any time of the day removes all feelings of heat, thirst or even hunger; and its being made in a great measure of vegetable acids tends, to prevent Scurvy and purifies the blood at the same time. It is also an invaluable Restorative for those who labor hard for a living, such as Farmers, Miners, Mechanics and Laborers, and to Storekeepers, Professional men and others, whose occupations compel them to lead sedentary lives, a draught before breakfast gives new spirit for the business of the day; and last, though not least, it is a boon to Woman, who is—

"The sweetest or sourest source of all our joy and woe,
That this world can give or life must know,
To those who are mothers, sisters, daughters, wives,
And would have pleasant homes and happy lives,
Should Sherbet keep,—the best thing made yet—
For with no widow's tears or orphan's cries is ever wet."

At home, in the house, for husbands, fathers, sons, brothers, beaux to use, and their own dear selves and darling little ones as well—medical men who know its composition speak in the highest terms of its utility, and all the poet's praise. Byron calls it the blest Sherbet. Moore make frequent mention of it, and Hafiz the great Persian bard says:

"Boy, let you sparkling Sherbet flow,
And bid thy pensive heart be glad."

Mr. Hogg introduced it into New York, and from thence he came to this country, as he was confident a climate like California would require a beverage of this kind.

From the testimony received we are confident this Beverage is worthy a careful notice by all who love a cool and pleasing drink in warm weather. The ingredients being purely vegetable, it carries with it a recommendation that is reliable for purity and excellence

PREPARED BY

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance is practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morals* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promot s habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risquetul occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve! whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,206 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 222; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

MOUNT TABOR—THE TRANSFIGURATION.

BY XENETTE.

[The annexed most thrilling lines will be read with deep feeling. The author of such thoughts must possess a mind that always recognizes the voices of nature, and thus holds the power to commune with nature, and "look from nature up to nature's God." We esteem these lines of "Xenette" worthy a high place among the gems of descriptive poetry.]

Serenely beautiful the sky
Bends over Tabor's summit high;
Far in the sunny vale beneath
Reposes quiet Nazareth;
And calmly onward toward the deep,
Old Kishon's sparkling waters sweep
Through fertile valleys, where the vine's
Rich clust'ring fruitage brightly shines,
While from above the orb of day
Looks down with pure unclouded ray;
And each sweet vale and verdant hight
Are smiling in his welcome light.

On Tabor's mount a little band
Midst Nature's lonely beauties stand;
"The Son of God"—the "man" of care—
The lowly "Nazarene" is there;
And by his side the faithful three;
Who love with him, their God, to be,
Upon the ancient mountain's brow
In pensive thought are standing now.

Yet not upon the plain around,
Although the richest verdure crowned,
Not to the blue far-distant sea,
Nor the rich vales of Galilee,
Nor yet where Carmel's naked brow
Towers up amidst the sunbeams' glow,
Now wander those disciples' eyes—
A brighter scene before them lies.

Still at their side their Lord is seen,
Yet oh! how changed is now his mien!
That meek, sad face which bent in gloom
Of tearful woe o'er Friendship's tomb;
Those eyes that once with tears were dim
For fated, doomed Jerusalem,
How strangely changed!—rich glories now
In majesty adorn his brow!
A radiant halo round him lies,
And awful beauty fills his eyes;
Unearthly grandeur's in his air,
And God-like majesty is there!

Beside their God, on either hand,
Two forms of radiant beauty stand;
Awe-struck, the rapt disciples gaze
Upon the scene in fixed amaze!
Ah! who are they, that glorious pair,
Conversing with the Master there?

A few strange words, with mystery fraught,
The wondering disciples caught,
Of fearful anguish He should see
In lonely, dark Gethsemane—
Of the betrayal's fell deceit—
The mocking throng—the judgment seat—
The crown of thorns for that meek head—
The cross on those blest shoulders laid—
The bloody ignominious tree—
The last "hour's" cup of agony—
The sepulchre—death's vanquished power—
The resurrection's triumph hour;
Mysterious words!—how soon to be
Explained on awful Calvary!

Soon changed the scene—and lo! from far,
Borne gently on the ambient air,
A gorgeous cloud descending spread
Its gentle folds o'er Tabor's head—
And then a deep low voice that stirred
Each spirit with its heavenly word
Breathed forth in sweet yet solemn tone,
"This is my own beloved son."

Too bright and glorious to last,
The glorious vision soon had passed;
The heavenly visitants were flown;
The bright, mysterious cloud was gone;
The Master's aspect had no more
The awful majesty it wore;
But now a man, obscure and lone,
Once more appeared the "Eternal Son."

Night spread o'er earth her mantle gray—
The glorious sun had hailed his ray;
Judea's hills, and vales, and streams,
Slept calmly 'neath the starry beams;
Still lingered they upon the hight,
As silent passed the hours of night,
Watching the far-off planets shine
O'er the hushed vales of Palestine;
Until the last, faint, starry ray
Faded before the eye of day—
And early sunlight's waking beam
Shone soft o'er vale, and mount, and stream.

* * * * * *

Long centuries have rolled away
Since passed that bright auspicious day;
Yet who that stands upon the brow
Of Tabor's sacred mount, e'en now,
But bows in reverential thought
Upon the spot where once were wrought
Such wondrous signs of sovereign power
As marked that memorable hour,
And thrills beneath the sense profound
That Tabor's mount is holy ground!

[United States Magazine.

An Elegant Extract.—Oh! who in the course of his life has not felt some joy without a security and without a morrow; when life seems concentrated in one short hour which we would wish to make eternal, and which we feel slipping away, minute by minute, while we listen to the pendulum which counts the seconds, or look at the hand that seems to gallop o'er the dial, or watch a carriage wheel of which each turn abridges distance, or harken to the splashing of a prow that distances the waves, and brings us nearer to the shore where we must descend from the heaven of our dreams, and the bleak and barren strand of harsh reality?—[Lamartine.

When the Chinese want to describe a person who pretends to be very brave, and makes a great parade in order to show his courage, they say that "he is cutting off a hen's head with a battle-axe." A coward who boasts of his courage they call a "paper tiger." They compare a person who pretends to be what he is not, to a fox who tries to look as noble and as strong as a tiger. If a person is ignorant of books, they will say, "Turn him upside down, but not a drop of ink will come out of him."

Judgment.—The most necessary talent in a man of conversation, which is what we ordinarily intend by a gentleman, is good judgment. He who has this in perfection is master of his companion, without letting him see it; and has the same advantage over men of any other qualifications whatsoever, as one that can see would have over a blind man of ten times his strength.—[Steele.

Ladies' Department.

[For the California Farmer.]

WRITTEN IN A LADY'S ALBUM.

Lady! sweet would be this task,
Could I the poet's power claim:
I cannot grant the verse you ask,
But on this page will write my name;
And, lady, I will nurse the hope,
When in separate climes we be,
That you, perchance, this page may ope
And give one thought to—

R. F. B.

ANSWER TO THE ABOVE.

Since first thy hand, for me, these lines did trace,
I've wandered far, from each familiar face,
Where only stranger-hands are there to greet;
Where only stranger-smiles in answer meet:
But though between us roll the deep, dark sea,
Treasured in memory's urn shall ever be
Thy image—yes, friendship will ever twine
For thee, her purest gems—this still is mine,
To ever breathe thy name in fondest prayer
That Lethe's stream may banish every care.

FLORENCE PERCEY.

A Mother's Influence.

I have always supposed that a mother's instruction and influence have the most enduring effect upon the destiny of her children. I have often feared for the effect that the false precepts and improper examples, which I have noticed in mothers, might have on the future conduct of the young. I once heard a boy relate how he deceived a postmaster, and defrauded him of the postage of a letter, and his mother not only did not reprove, but commended him for his shrewdness. I have known a mother praise her little boy for saving a cent by deception. Another boy came home with a few cents too much change, which a trader had given him by mistake, and his mother approving of his keeping it.

I knew of a young married woman who, with great self-complacency, remarked, that she never *stole* anything but once, and that was a half pint dipper from a pedlar. I have known a mother to teach her boys how to get into shows and lectures, without paying the admittance fee.

In these, and in a great many other cases which I have known, of mother's educating their sons in villainy, I have been at a loss to decide, whether these women were ignorant or corrupt; whether they did not know the difference between right and wrong, or had no conscience. I have generally been inclined to have charity, and impute their conduct to ignorance. But certainly if they had any true regard to the future welfare and happiness of their children, they would never initiate them into a course of dishonesty which, if followed out to its legitimate results, will prove their ruin.

A case has recently passed under my notice that makes "still the wonder grow" that any mother will be so indiscreet, to give it no harsher name.

A few evenings since I had an opportunity to hear a very celebrated lecturer. It was the ninth lecture in the course, and a very crowded house, probably 2500 persons were present. Tickets for the course $1; single tickets 25 cents.

After my return from the lecture, a mother and her two sons, both of whom are clerks in commercial houses, were conversing upon what their tickets cost. The mother says, "I had two tickets, a good one, and one you 'fixed.' I let ——— have the good one, and used the other myself." Each of the boys went in with those which were "fixed." They then explained to me what the "fixing" meant. They had, or obtained, tickets for the sixth lecture; which had not been used. For some reason, that lecture was not very generally attended. They were printed on pasteboard of two thicknesses of paper thus—"6th lecture," and they cut around the 6, took it out on one thickness of the pasteboard, reversed it, and it was "9th lecture."

This forgery was talked of by this mother and her two sons, just as if it were a shrewd commercial transaction! The next morning the daily paper come out with an article exposing the cheat, and stating that 173 of those bogus tickets were palmed off upon the doorkeeper.

How much money these young men made by the operation, I have no means of knowing. But when boys have such lessons and examples as these from their mothers, in commercial integrity, are we to wonder that there are dishonest post-office clerks, and dishonest treasurers of railroads, or that there is dishonesty anywhere and everywhere? If boys "make tickets" with the approbation of their mothers to defraud Lyceums, why may not men "make paper" to defraud banks and brokers? If great and good men are indebted to their mothers for their greatness and goodness, have not those young men a fair chance to be indebted to their mother for their ruin?—[Drew's Rural Intelligencer.

Home Management.—Though the art of managing a house may at first sight seem a very simple affair, yet there are very few people who do it well. Nearly every woman dislikes the worry of over-management almost as much as neglect. The great art is to hit the happy medium quietly, and to keep the servants to their duty without scolding them. It is a great point to live always in the same manner as regards style, to have the cloth laid as carefully when alone as when there is company. When this is the case, no wife feels afraid of her husband bringing in an unexpected guest; and it is gratifying to her husband to find a guest of this kind received quietly; whereas, nothing can be more disagreeable to a husband than to see his house thrown into confusion, his wife cross, and his servants scrambling to change the things laid on the table; and in short, everything going wrong simply because he had asked a friend to dine, without giving a day or two's notice of his intention to do so. It would be in better taste to allow the stranger to sit down to a meal served as roughly as a laborer's in a hovel, than to attempt to receive him with extempore finery; for the awkwardness and blunders of the servants will soon show him the real state of the case.

The Prettiest Lady in New York.—The Evening Post says that a letter was lately advertised directed "to the prettiest lady in New York." It adds that "no less than seven hundred and sixteen ladies are said to have applied in one day for the golden letter, and the gallant dispenser of *billets-doux* at the ladies' window was removed to the New York Hospital in a state of mind bordering on derangement produced by the combination of loveliness to which he was exposed."

Why are kisses like the creation? Because they are made out of nothing, and are very good. [The perpetrator of the above was sentenced to kiss fifteen young ladies as punishment for his offense. He took the matter very coolly, saying that he considered kissing *capital punishment*.]

BOOKS, &c.

Very Valuable and Important!
VAUX'S ARCHITECTURE.

VILLAS AND RESIDENCES: A Series of Designs Prepared for Execution in the United States. By Calvert Vaux, Architect (late Downing & Vaux), Newburgh on the Hudson. Illustrated by 300 engravings 8vo, muslin. Price $2.
This copiously illustrated work has been prepared with the intention of giving a hearty practical response to the ever-increasing popular desire for improvement in American rural architecture, and it deals with the whole subject in a simple, comprehensive style free from all professional technicalities. As it is very fully illustrated, it affords a storehouse of practical suggestions to all who are interested in the building of country houses in America; and as the architectural designs of which it is composed have been for the most part prepared in detail for actual execution, this work has the all-important advantage of being the result of *bona fide* experience both on the part of employers and architect. It also contains a much-needed chapter, in which the special features of interest that occur in building country houses are touched on and drawn in detail, and a valuable amount of information on these points is thus introduced in a condensed, intelligible manner.
To avoid any confusion of ideas in examining the book, the various illustrations are so arranged that the whole scope of each design may be comprehended at a glance; and the vignettes that are appended to the designs have afforded opportunities for treating in an attractive manner many interesting accessories that have hitherto scarcely attracted the attention they deserve.
To a great number of persons this volume will have an additional interest, as it contains several designs that were prepared while the author was in partnership with the late A. J. Downing, whose well-known works have had such a beneficial influence on rural taste in the United States.

Downing's Rural Essays.
Edited with a Memoir of the Author, by George William Curtis, and a Letter to his Friends, by Frederica Bremer. In One Volume Octavo.

Of Mr. Downing's reputation as a writer, it is almost superfluous to speak. He is, by universal consent, the best and most interesting among those who have chosen the same line. This volume contains all the editorial papers in the Horticulturist. The memoir will be read with great interest, on account of the amiable and excellent character of Mr Downing, as well as his well-earned literary fame. Miss Bremer's testimonial to his merit is an eulogium equally worthy of him and of herself. The volume closes with a series of interesting letters from England.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the best Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."
THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.
THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors; and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.
SPECIMEN NUMBERS
Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

PROSPECTUS OF VOLUME VII. OF THE CALIFORNIA FARMER.

The California Farmer was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer Farmer expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the California Farmer.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the true friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it to comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the Farmer are, for the year (always in advance), $5.

Seventy-Five Dollars per Season. - - - - - Terms Cash in Advance.

THIS CELEBRATED PACING STALLION WAS BRED IN CANADA, BY D. PREVEE, ESQ., IS FULL Brother to the celebrated Trotting Stallion FRANK PIERCE, now owned at White Hall, New York. He is seven years old, Chestnut Sorrel, Fourteen-and a-half Hands High, and possessed of great muscular strength.

He is sound in every respect and of disposition as gentle as could be desired in a horse, a fact which should not be overlooked by those who desire to raise fine Horses. He has a fine head and neck, tremendous shoulder arm, silk and gaskin,—short back, well ribbed up, and is a very Smooth Pacer.

When in Canada he was known as Canada Peacock, and CHALLENGED Upper and Lower Canada. He was imported to Albany, N. Y., by O. C Gunn, Challenged the State of New York, and in two matches won them both. From Albany he was brought to California, where he has had two matches, winning each. He has never yet been beaten, and now

Challenges any Pacing or Trotting Stallion in the United States,

Best 2 in 3 or 3 in 5, One Mile Heats, in Harness; or any Trotting Stallion, now in this State, 2 mile heats, best 2 in 3, over the Pioneer Course, San Francisco, for from $1000 to $5000, any time out of his Standing Season.

He is a Sure Foal Getter---Never Failed in any Instance.

☞ Gentlemen having Mares at a distance, may rest assured that every attention will be shown them, and charges moderate.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that o'er ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

MEDICINES, &c.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and Individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

To Photograph Operators.

Ambrotype, Photograph and Daguerreotype

STOCK AND CHEMICALS,

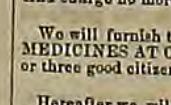
FROM THE BEST MANUFACTURERS,

FOR SALE AT THE LOWEST PRICES, BY

R. H. VANCE,

Corner Montgomery and Sacramento streets,

SAN FRANCISCO.



BEING OURSELVES PRACTICAL CHEMISTS, and manufacturing many of our Chemicals, we can guarantee them far superior to any put up for sale.

To operators out of the city we will send our own prepared Collodion, which we use, and which surpasses any ever sold in the country for tone and finish.

v7-12

EDWARD PELOUZE. JOHN K. RODGERS. DAVID WATSON, JR.

BOSTON TYPE FOUNDRY.

BOSTON TYPE FOUNDRY

THIS Establishment (the oldest in New England, having been commenced in 1817) is now carried on by the subscribers under the style of

JOHN K. RODGERS & CO.,

and the attention of Printers is respectfully asked to their facilities for promptly and satisfactorily meeting the wants of the trade.

Besides their present large variety of

Book, Newspaper and Fancy Types,

Of which they have recently issued a specimen book, they have in hand many NEW AND BEAUTIFUL STYLES of plain and fancy letter, which will shortly be shown in a Supplementary Specimen Book.

Newspapers fitted out promptly, and carefully and particular pains taken with ORDERS FROM CALIFORNIA. v6-12

Favors Received.

Words will not, cannot convey all we would express of gratitude to those kind friends who remember us so kindly in fruits and flowers and other favors of the seasons. Having been absent a greater portion of the last six weeks, on our summer tour, we many not have spoken as promptly as we should of favors received, yet we "dinna forget."

That large box of superb Roses, from the beautiful gardens of Mons. Provost, at San Jose, made many hearts happy. To say they were beautiful, very beautiful, would be true; to say they were fragrant would be true also; and to say that we believe a richer collection of more splendid Roses could not be found in all California, we know would be true also. Mons. Provost excells in growing large magnificent Roses, and it is worth a visit from the bay city to view his grounds and see his Roses. That gorgeous Rose "La Reine," the size of a large coffee cup, and fragrant as the lips of the goddess Flora herself—but time nor space will not permit us to name all the varieties of splendid Roses so kindly sent us—we do know we saw sweet and dear children filling vases and making wreaths to welcome the "Queen of May," (for the box came opportunely the evening before,) and we know too the wreaths of many of these fragrant gems still hang around the windows of our sleeping appartment, in remembrance of the kind giver, of the hands that wove them, and of the month of May. But we have not told all. Beneath the roses in the box, fair hands discovered, unknown to us, that basket of luscious strawberries—Pomona and Flora thus wedded together, we are placed under double obligations. It was a rich and generous gift, and we hope a bountiful harvest will reward the generous giver, who has our grateful wishes and prayers for it.

Enough for a Feast.—On our hasty run up to Sacramento last week, to the grand sheep shearing, where we enjoyed so much, we were generously treated to the good things at Smith's gardens. We suppose, however, we may have omitted some duty, so as to offend our generous friend, for we found on our desk at the office there, just as we were leaving, a note, a fine box of strawberries and a rich lot of flowers. This we take to be a challenge, and that he means to choke us to death with strawberries and cream, and strew the flowers over our place of rest. Well friends, go on, have your own way; however large the pills are we can swallow them all, or get some one or more friends to help us.

California Wine.—Too much of a good thing is—is—very acceptable. Our very kind friends Messrs. Kohler & Co., have placed us under many obligations, by sending us a very generous collection of their wines, as a sample of the different kinds they are now offering to their customers. We received two boxes, containing Port, Angelica, Red Wine and White Wine, each of very superior quality, for which we return our sincere thanks; and we hope a generous public will duly appreciate the wines of California, and give them the preference over the wines of foreign make. Surely they will when they know that they are cheaper and better.

Sherbet.—The proprietor of the new Sherbet, Mr. Hogg, at the Davis street drug store, very kindly sent us samples of his beverage for trial. We approve of the drink, and would call the attention of our readers to his advertisement in another column.

REMOVAL.—The large Family Grocery Establishment of Messrs. Reynolds & Law have removed from the corner of Jackson & Kearny to No. 134 Washington street, opposite Washing Market, and have opened a stock of Groceries that cannot be excelled. We are not only happy in having good neighbors, but happy in cheerfully commending them to the public as one of the places, where families that want "good things" should go.

AXLE GREASE.—It is a duty we owe to our readers to name a valuable invention which appears in our advertising columns. We allude to Messrs. Hucks & Lambert's Axle Grease; this is an invaluable article, and should be used by every person that owns a wheeled vehicle, if it is only a—wheelbarrow.

SONOMA MUNICIPAL ELECTION.—The annual election of officers for the city of Sonoma, took place last Monday, with the following result: A. G. Oakes, Mayor; P. J. Vasquez, Fred. Roher, S. Rupe, A. C. McDonald and C. Bruner, Aldermen; William Ellis, Marshal; J. B. Boggs, City Attorney; H. D. McNabb, Treasurer; F. Cowan, Assessor.

COMMITTED.—Last Wednesday, Deputy Sheriff Greene passed through Petaluma, on his way to San Quentin, accompanied by the late treasurer of that county, W. A. Boster, who is about entering upon new duties in that institution for the next eight years.

THE want of rain is much complained of in the North. The crops about Tehama, it is said, will amount to but little this season. The grass is now ready for mowing.

HOLLOWAY'S PILLS, prepared from selections from the vegetable kingdom, possess the most miraculous virtue in correcting derangements of the liver and stomach; they also strengthen the digestive organs, and increase the appetite.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists at 25c., 62½c., and $1 per box.

OUR native forests furnish us with Nature's own remedy for all long complaints. Dr. Wistar, in his Balsam, combines the essential qualities of the Cherry Bark with Tar Water. It has cured many cases of seated consumption. None genuine unless signed I. Butts on the wrapper.

RAIN.—Marysville and its vicinity was visited with rain on Wednesday night last, which fell continuously for nearly six hours.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
15 John street, New York City.

v6-24 tf

SEEDS.
HOVEY & CO.,
DEALERS IN SEEDS,
No. 7 Merchant's Row, Boston, Mass.

ARE now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable Seeds are requested to forward their orders early.

Seeds packed securely for California or any other part of the country.

Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.

Catalogues sent gratis on application.

☞ Remittances must accompany orders. v6-19

New Flower Seeds.

A superior lot of very choice Flower Seeds—many rare kinds—just received from a Boston house. Persons wishing any of them can procure them by calling at our Office, 130 Washington street, San Francisco; or address by letter marked "Seed Order," and it will be promptly attended to. [7-11] WARREN & CO.,

Sugar Beet Seed.

WE have received a lot of very superior French Sugar Beet Seed. It is of extra quality, new and fresh, and imported expressly for trials of beet raising for sugar making.

Persons who desire a superior article can order by express, and the seed will be carefully forwarded. Such orders should be addressed to our office at San Francisco, superscribed "Seed Order." [v7-11] WARREN & CO.

Garden, Ornamental and Forest Tree Seed.

A VERY choice assortment, selected by Messrs Thorburn & Co., of New York, with great care, expressly for BRYANT & CO.,
v7-6 2m 68 Battery street

Hemp Seed.

SUPERIOR Hemp Seed, just received. No country in the world can surpass California in the production of this article.

For sale at our Office 130 Washington street, San Francisco.
v7-11 WARREN & CO.

Seed of the Great Tree.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the CALIFORNIA FARMER. v5-13

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Rose.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent to San Francisco for Smith's Pomological Gardens.
v6-19 3m A. P. S.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.

For sale at the lowest rates by
TREADWELL & CO.,
Corner California and Battery streets,
San Francisco.

N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 tf

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

PARKER, WHITE & GANNETT.
SEEDS, PLOWS AND TOOLS.

For sale as low as can be purchased elsewhere in the city v7-10 3m

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measures operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.

R. BEECHING, Manufacturer,

BOOKS, &c.

The Fruit Garden.
By P. BARRY,
Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, THE VILLA, THE MANSION AND COTTAGE. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

Copies of either of these books sent by mail (post-paid), for $2, remitted to

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

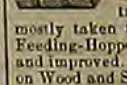
Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

PHILLIPS, SAMPSON & CO., Boston, Mass.
H. H. BANCROFT & CO.,
v7-6 3m San Francisco, Cal.

American Poulterer's Companion.



A PRACTICAL TREATISE ON THE Breeding, Rearing and General Management of various Species of Domestic Poultry. Illustrated with Portraits of Fowls, mostly taken from Life; Poultry-House, Coops, Nests, Feeding-Hoppers, &c., &c., &c. A new edition, enlarged and improved. By C. N. Bement. With 120 Illustrations on Wood and Stone. Square 8vo., Muslin, $1 25.

This is just the thing. Here is the whole feathered tribe—geese and ducks, hens and turkeys, without number. Besides the manifest utility of such a book to farmers generally, it will be the special delight of hundreds of juvenile readers, whose first attempt in the care of stock on a farm is the oversight of a poultry-yard. Even now we see their eager eyes glistening over these pages. But the book has great merit and value not only for young folks, but for all who live in the country, and who have occasion to attend to this most useful branch of domestic economy.—[N. Y. Evangelist.

We have not yet become acquainted with a more complete treatise on the subject. No labor nor expense has been spared to render it the best work of the kind ever published, and such we consider it.—[News.

If our country friends get this book, we have no doubt that their poultry-yards would be improved.—[Richmond Presby.

No farmer should be without it.—[Spectator.

Eminently practical. All who are in any way interested in the rearing of poultry will be delighted with the great amount of useful information presented in this book.—[Com. Adver.

The lithographs of splendid specimens of stock are really superb, and render the volume ornamental as a gift book.—[N. Y. Sun.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

LUCAS BROTHERS, No. 170 Market street, Baltimore, Md., call the attention of the public to their new splendidly illustrated edition of Mrs. Wirt's Flora's Dictionary. It is a medium quarto, containing two hundred and thirty pages, embellished with a border, and interspersed with upwards of

Five Hundred Wood Engravings!

It is issued in the following styles of binding and illustrations:

Muslin, super extra, gilt edges and full gilt sides, with Eight Groups of Flowers colored from nature.

Morocco, extra, gilt edges and full gilt sides, with Fourteen Groups of Flowers colored from nature.

Turkey Morocco, super extra, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

Turkey Morocco, ANTIQUE, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

☞ The above truly superb work is for sale by

MEDICINES, &c.

SANDS' SARSAPARILLA,
FOR PURIFYING THE BLOOD,
AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1856.

Messrs. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 24 of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were relieved, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,
CALEB DAVIS.

ROMAN EYE BALSAM,
FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

Messrs. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,
G. B. WILLIAMS, 262 BROADWAY.

Agricultural Reviews and Essays—No. 11.

Agricultural Institutions.

CHAMBER's Edinburgh Journal. "Biographical Notice of Fellenberg."

ENCYCLOPEDIA Americana. *Article*—"Hofwyl."

IT WAS a wise provision of the framers of the Constitution of our State, that "the Legislature should encourage by all suitable means the promotion of intellectual, scientific, moral, and agricultural improvement;" for except the State take such branches of education under its special protection in a remote country like ours, made up of inhabitants from all parts of the world, many of whom came here without the intention of staying long, and most with the expectation of speedily making a fortune, it is not unlikely that those great requisites, on which the true prosperity of States and Countries depends, in the scramble after riches might be overlooked. Nor is Agriculture, though last on the list, less deserving of legislative attention. To acquire wealth by its means much patience is needed. The common miner finds himself every night remunerated for his daily toil; but each separate season has to furnish its aid for producing the farmer's crops; he is only repaid in yearly installments.

The State has not been negligent of its duty. When application was made to it to extend its aid to an Agricultural Society, by which, from the success of similar institutions in other countries, it might have been presumed the trouble of promoting the increasing Agriculture of California would have been taken off its hands, and cared for in the most prudent manner, it liberally and at once granted all that was asked.

When we look back to the time that the Legislature thus liberally extended its aid, we find the advocates of the Society asking "power to hold in its name any quantity of land not exceeding four Sections—the said real estate to be held by the Society for the sole purpose of establishing a model experimental farm or farms, erecting inclosures, buildings, and other improvements, &c." Whether the Society has acted prudently in not following up the object then suggested, I do not mean at present to inquire. Let us give them credit for sincerity, and suppose that in all their proceedings they have acted according to the best of their knowledge. But while for the sake of harmony we are disposed after some hesitation to concede the point, for the sake of economy, and as good citizens, it is our duty not to make further extensions of our liberality towards them, without coming to a special understanding on so important a point—as to how the grand object of best promoting agricultural improvement, as originally contemplated by the framers of our State Constitution, is to be accomplished.

The Legislature has this session very properly passed an Act, by means of which a valuable tract of land in the vicinity of Tulare Lake may be drained, and rendered about the best farming land in the State of California—the Company, who undertake the whole expense, giving to the State one half of the land so drained, for the other half. This was an excellent arrangement for the State, and cannot fail to be a very profitable one for the Company. Now, as the State Agricultural Society does not seem likely to have much spare funds to purchase land for some time, I would submit to the public the propriety of obtaining from the State a grant of *half a Section* of this land when reclaimed, for the purpose of establishing a model and experimental farm, connected with an institution where young men might be taught the ordinary branches of modern education, as well as Agriculture on the most approved principles. If they would do so, and erect suitable buildings, &c., thereon, and at the same time set apart a yearly sum of $5,000 for its support, together with the profits of the Farm, we might have an Agricultural Academy in this State equal in merit to the Military Academy of West Point, and thus succeed in raising the dignity of Agriculture to a standing, which no industry without a good scientific and practical education can arrogate for it.

The erection of suitable buildings, and the agricultural capital necessary for its first establishment would not amount to very much, and when once established, the undertaking, if it were not that it would be of the greatest importance to make it embrace an experimental farm, might support itself.

Let us suppose that such an institution were established, with a well-educated and practical farmer to preside over it, and some half-dozen teachers as assistants, to instruct at the same time the young men who aspired to acquire a thorough knowledge of practical and scientific Agriculture, in Latin, Mathematics, Chemistry, Geology, Botany, Physiology, and Natural Philosophy generly; and also in History, Geography, and Drawing—who would wish a better seminary to which to send their sons? We might expect it to be well attended; for under the patronage of the State the fees for education might be made the least possible. Besides, there would be no danger of the students acquiring indolent habits, or suffering from the want of healthy exercise, for study and labor might be so combined as to render the one a recreation from the other. But its chief recommendation would be, that it would tend to exalt Agriculture on correct principles. Young men would thus be instructed scientifically, so that in their after career as farmers they would not be insnared into trying stupid experiments, and practically, so that they would be competent judges themselves of how every portion of the work on their farms ought to be performed. They would also be made well educated and intelligent men, and be qualified to discharge with credit to themselves and their country the duties of any office which they might be called upon to fill.

If such an Academy for the education of Farmers had never been attempted, the scheme might be considered by some as altogether Utopian; but from its perfect success at Hofwyl, the establishment of Mons. Fellenberg, we need entertain no fears of its proving one of the best institutions which could possibly be proposed, not only for the advancement of Agriculture, in which every man feels an interest, but for education generally. Besides, the State Agricultural Society might derive the greatest advantages by connecting itself with such an institution. Did it want experiments made in regard to certain plants, or manures, or modes of cropping, here would be the place where experiments could immediately be made, and the qualities and suitableness of plants, manures, and systems of farming, at once ascertained. Did it want to test the comparative merits of different species of the same plant, under the same or different modes of culture, here would be the place to do it. In fact it would be a source from which the old as well as the young might receive information of the most valuable kind, and a school from which experienced farmers might derive instruction.

Such are the general advantages derivable from an institution of this kind anywhere, but there are reasons which call more loudly for an Agricultural Seminary among us than in most places. Not only are the climate and seasons in California very different from those of the Atlantic and Western States, and of Europe—thus rendering it very difficult for us to cultivate many of their usual crops—but the influence of our climate and seasons on the soil are also so different from theirs, as renders a very different mode of cultivation necessary, if we expect our soils to retain their original fertility. The commonest farmer knows this, but he is at a loss where to go for advice. It is true we have any number of quacks, if I may apply the term to those who are really scientific men, but who know nothing about practical Agriculture. For myself, I never see an honest farmer acting on the advice of one of those pretenders, but it puts me in mind of the two religious ladies who set out a mule-driving, as mentioned by Sterne in his Tristram Shandy. The mules went on pretty well for some time, but after a while made up their minds to stand stock-still. The ladies scolded, they prayed, they coaxed, they whipt; but the mules were resolved not to go, and go they would not. At last says one of the ladies, "I know a word which would make them go, but it is a very improper word for ladies to use, but when I say the first half of it, do you say 'gars,' and we will try them again." The other willingly consented. So seizing firm hold of the reins, and applying the whip, the first lady boldly addressed the mules with "Get up you," adding a little monosyllable which, although I quote from the works of a clergyman, I prefer to omit, when the other promptly added "gars." But somehow it produced no good effect. Still, though the ladies out of a due sense of religion and propriety were unwilling singly to use the obnoxious word, they continued for a long time with laudable perseverance to split it in two, one using the one half, and the other, the other half, but still the obstinate brutes refused to go; when luckily a country man came up, to whom they revealed their woful plight. Hodge took the whip from the hands of the baffled ladies, and gave each mule a lusty stroke, using at the same time with appropriate emphasis the very word which the good ladies had been religiously dividing between them to no purpose, when strange to say, as if by magic, the incorrigible mules started immediately! As it happened with the ladies, so it ever happens when the merely practical farmer is scientifically assisted by his medical adviser. The Doctor, let us admit, is a learned man, and knows intimately the properties of salts and minerals; but somehow, when they attempt between them to join the science of the one to the practice of the other, the patch does not fill the hole, the pieces do not join properly, something is omitted, and Nature spurns their united efforts, and with mulish obstinacy treats their joint appliances with contempt.

In all countries common practice tends gradually towards science. When the soil was first broken in any country by immigrants from another, under a great disparity of climate and other circumstances, it may have taken farmers, unacquainted with science, a long time to find out a suitable system of Agriculture. But year after year they were getting wiser, and at length became tolerably perfect. The same thing would doubtless happen here, after a time, without the aid of science, and a system of farming would prevail, as the result of experience (whether those who practiced it were able to account for it on scientific grounds or not), which on scientific grounds would be perfectly unobjectionable. But we do not choose to wait. We would not contentedly learn from a series of blunders. We want to go ahead. We want to avail ourselves of every facility in our power to promote, as much as possible, an art which is of such paramount importance to us. Can we do better than establish an Agricultural Academy, where practice and science may be taught in conjunction, under the management of some one who has mind enough to grasp the whole subject, and where the sciences which minister most to the advancement of Agriculture, as well as to the improvement of the mind, may be fully imparted?

AGRICOLA.

ENTRANCE GATE.

Entrances to Country Seats and Villa Residences.

THIS style of gate having been approved and adopted in various parts of our country, we hope to see it introduced in California and improved upon. In relation to it, the Horticulturist says:

"Every traveler through England must have been struck by the effect produced upon its rural scenery, not only by the entrances to the more extensive parks of the nobility, but also by the numerous gateways and lodges, which are found to almost every country home, and to the small pleasure grounds even of the suburban villas. Few, if any, appendages to a residence which has only a limited extent of ground surrounding it, add so much elegance to its general appearance, or importance to its character, as does an entrance suitable to its position and extent.

With a view to foster so desirable and well directed a taste, we have presented our readers with an engraving in the present number, taken from an entrance gateway, which has long been in high esteem with the landscape gardeners of England.

The arch is one which is adapted to grounds of considerable extent, and the mansion to which it belongs bears an architectural character in accordance with its general features. Whether it be a single gate, an arch or lodge, the position of it should rarely, if ever, be parallel to the road of approach. It should always be placed a few feet, and often some yards from the side of the road, and, if possible, in the immediate vicinity of a few trees, whose age and grateful shade may add both dignity and beauty to the new erection."

The Peach Blight.

EDITORS FARMER: Your last issue contains a well-timed allusion to the *blight* in the Peach, and expresses a wish for communications on the same subject. Although not a practical Fruit-grower, yet feeling no unusual interest in everything pertaining to the welfare and prosperity of California, I propose to state briefly but modestly the conclusion to which I have come as to the cause of this ruinous disease. If my theory is not based on the facts of the case, I trust this short article will call forth more experienced writers, upon the same subject.

As to the facts: so far as my observation goes, those orchards have suffered most, which at one time were well irrigated, but for some reason or other are not subjected, this season, to the same treatment. This was the case at Judge Hester's, in the neighborhood of San José, and at some other places recently visited by the writer.

As to the cause of the disease: all are aware of the fact that trees growing upon the banks of streams, or which have been well irrigated, do not strike their roots deep into the soil, when they can find moisture and sustenance nearer the surface. Hence the blighting effects produced, when the usual quantity of water is withheld, particularly in a season of drought like this.

There are, on the other hand, many flourishing young orchards, which have never been irrigated. Where such have partially suffered from this disease, the fact may be accounted for in the following manner: They may have been planted at an insufficient depth, in a wet soil, or during a rainy winter; or they may not have been well cultivated. All or any of these causes, in a dry season, would be followed by effects similar to those heretofore mentioned.

If the theory advanced is true, you will plant deep, with a considerable quantity of straw and manure about the roots to retain the moisture; water well at the time of planting (not afterwards unless it becomes very dry); cultivate well and frequently, and you will have flourishing trees. So thinks an OBSERVER.

A Voice from Alameda County.

WE present the following letter from Frank F. Fargo, Esq., the Secretary of the County Meeting, lately held at San Leandro, and at which we had the pleasure of being present, while on a tour through that county.

We were highly gratified at the interest manifested on that occasion. It was quite a spirited meeting, although the notices were only posted that morning; and we predict that an efficient Society will spring into existence speedily, and accomplish great good.

In answer to the fears of our friend and correspondent, relative to the State organization, we are happy in being able to remove them all. By referring to our editorial columns he will find we have been upon the ground, and he may rest assured that the business is in good hands. Good and true men have hold of the work, and although they have commenced later than usual, they have a strong team, and whatever they undertake they will most surely accomplish. We hope our friends in Alameda will arouse and do all they can to make this State Fair one of the best ever held. We also hope that our friend will see that we are advised of the further doings of the County Society.

—

ALAMEDA COUNTY, May 9th, 1857.

EDITORS FARMER: A move has finally been made which will probably result in the formation of an Agricultural Society in this county.

In accordance with your proposition, in replying to my suggestion respecting such an organization, a meeting was held last evening at the Estudillo House in San Leandro, which was attended by a large number of farmers and those interested in the cultivation of lands in this vicinity, and the initiatory steps were taken to organize a County Society to promote the interests of Agriculture and Horticulture in Alameda county.

From the official minutes of the meeting you will see that the matter was taken hold of in earnest, and there is every probability now of a prosperous and flourishing association of the character alluded to.

By the way, what is the State Society doing? Has it still an existence? Are we to have an Annual Exhibition this fall? It seems that but little has been said or done by those having control of this body this Spring, and the impression here is that those who should now be active are lukewarm. Stir them up Colonel, through the FARMER, and we may yet save the Society from dissolution. What have those in authority to say about this matter? Much depends upon them now; whether we shall keep up the State organization, or allow it to be numbered among the things that were. A firm and zealous support of the County Societies will naturally give succor to the State organization, and the prosperity of the one depends upon the support given the the other.

Please give your readers the present condition of the State Society, and call upon the officers to be up and doing for the Fall Exhibition.

Yours truly,
FRANK F. FARGO.

County Agricultural Society in Alameda.

A meeting of farmers and others was held at the Estudillo House, San Leandro, on Friday evening, May 8th, 1857, for the purpose of taking measures for the organization of a County Agricultural Society.

Henry Smith, Esq., of Alvarado, was elected Chairman; and Frank F. Fargo, of Brooklyn, chosen Secretary.

Col. Warren, of the CALIFORNIA FARMER, being present, entertained the assembly by some well-timed suggestions, and gave some interesting and profitable statistics of matters relating to the products of the soil of California.

After a free interchange of views and opinions as to the best course to pursue the obtain to objects of the meeting, on motion the Chairman was authorized to appoint a committee of two persons from each township in the county to prepare and report a Constitution for the government of the Society.

The following persons were named such Committee: Washington Township, J. J. Vallejo, A. Baker; Eden Township, I. Taylor, J. F. Damon; Brooklyn Township, Frank F. Fargo, Albert Lockwood; Alameda Township, Wilson Flint, A. H. Myers; Oakland Township, Col. Gray, Mo. Kelsey; Murray Township, F. W. Dougherty, I. W. Cathinger.

On motion the meeting adjourned to meet on Friday evening, the 18th inst., when the Committee will be expected to report, and an election of officers will be held.

HENRY SMITH, Chairman.
FRANK F. FARGO, Sec'y.

A Pleasant Trip Around Stockton.

WHILE at Stockton we enjoyed a pleasant ramble among the various improved spots of this inland city. Among the most beautiful places we visited, we called by a courteous invitation on the first Vice-President of the State Society, Dr. Holden, whose fine mansion and garden has arisen from prairie land in the brief space of two years, to be one of the finest seats around Stockton; by judicious cultivation, and with a fine collection of roses, trees and vines, with fine arbors and trailing plants, the grounds are made truly beautiful.

Dr. Holden irrigates by means of hose, conducting water from one of those wells we have named (bored with a two-inch auger), to which is attached one of Mills & Doll's windmills; thus supplying garden, house, barn, and furnishing a never-failing supply of water. The cost of boring the well is only about $5; the windmill is a fine ornament, and not of much cost, but invaluable.

Dr. Holden has a large and fine collection of stuffed birds, and other animals, all of California species, killed, prepared and stuffed by himself. This home collection will add much to the State Fair.

Dr. H. very kindly took us in his carriage to visit the vicinity, some half a dozen miles up, which gave us a view of the heavy fields of wheat and barley now growing upon the Calaveras bottoms, a soil as rich as can be found in the State. It will be recollected that Dr. Holden and his lady were recently thrown from their carriage—a pair of fine blood horses becoming frightened. They escaped most wonderfully from destruction, although his lady had her collar-bone broken and the Doctor was severely torn and bruised, yet we are happy to say he is now well and his lady rapidly recovering. We considered it a miraculous escape, when we saw the place, and knew the spirited Virginia bloods that were attached to the carriage.

For social entertainment, kind courtesies and generous aid in behalf of our journal, we are indebted to the liberality of Dr. Holden.

FRUIT IN THE COUNTRY.—The Red Bluff Beacon says, "Everybody is boasting of the prospect of fine fruit crops. Maj. Bradley informs us that his trees and vines promise abundantly, although many of them are but two or three years old. In a few years the valley will produce fruit sufficient for our own consumption."

On Parturient Fever in Ewes.

GIDDINESS ACCOMPANYING PARTURITION.

Prize Essay—by Isaac Shuman—to the Royal Agricultural Society of England.

PARTURIENT fever in ewes ("giddiness accompanying parturition") forms a very interesting and important subject for investigation, with the true nature of which the shepherd and flock-master cannot be too well acquainted.

The term "giddiness," signifies stupor, sleepiness, delirium; and is universally applied by flock-masters to sheep suffering from hyatids, or water in the brain. Now that we may distinguish this so-called giddiness accompanying parturition in ewes from other diseases bearing the same name, I propose to call it parturient fever; "for in calling different ailments by the same name," as observed by an eminent writer on influenza in horses, "our description of diseases becomes involved in obscurity; we never agree as to the treatment, and investigation into their character becomes more difficult than nature intended." I call it parturient fever, because fever it really is, as the appearances before and after death will show; and it does not affect the ewe at any other time than shortly before and after lambing (parturition).

Parturient fever is an affection of common occurrence, and was attended with much fatality amongst the flocks in the counties of Cambridgeshire and Essex during the lambing season of 1852–53. It is remarkable for the suddenness of its attack, the rapidity with which it runs through its different stages, and its general mortality to those affected by it. It is so violent in its attack, and rapid in its progress, that it may prove fatal in twenty-four hours, if not arrested by the most decisive means. It affects most commonly ewes of a delicate constitution, such as the Sussex Downs; the more hardy Lincoln and Norfolk ewes are comparatively exempt from the disease. It manifests a more severe form in aged ewes and ewes bearing twin lambs.

Causes.—Any circumstance or agency which depresses the power of the system, insufficient or improper food, close folding, exposure to fatigue, to cold, and moisture, may be considered causes of the affection. I have repeatedly noticed where ewes before lambing have been removed from a sufficiency of wholesome food to other possessing less nutritive qualities, they have suffered greatly from parturient fever. The practice of fattening sheep and ewes, being fed on the same piece of turnips (the best parts of which are consumed by the former, whilst the roots and inferior parts are consumed by the latter), ought to be abandoned; a small fold, too—a circumstance so essential to the development of fat in the one, whilst highly injurious to the pregnant ewe, to whom exercise is of the greatest importance for the maintenance of health. Moist and warm seasons, vegetables growing luxuriantly, and the non-supply of dry farinaceous food, are alike productive of the affection. Fat condition is thought to be a grand cause of the disease. I certainly have noticed the Sussex Downs (a breed most disposed to collect fat) suffer most, and, as before stated, a delicate sheep; but losses have been sustained, from the fact that the breeder, thinking them too fat, a short time before the full period of gestation lessens the supply of food which is plentiful and nutritious, and substitutes that of a poorer nature. I well recollect the circumstances of an extensive breeder unknowingly feeding a number of pregnant ewes for the butcher, who did not discover his ignorance until after sixteen weeks' gestation: the ewes at this time were fat enough for slaughtering. Alarmed with the fear of losing them in lambing, he disposed of them to an experienced sheep-dealer, the dealer did not think there was any particular danger in lambing such ewes, and continued to feed them upon the most nutritious diet, such as linseed-cake, oats, hay, and turnips. He had not a case of parturient fever, and his losses otherwise were not more than two per cent.

Symptoms.—The most early symptom that marks the commencement of this disease: first the ewe suddenly leaves her food, twitches both hind legs and ears, and returns again to her food; during the next two or three days she eats but little, appears dull and stupid; after this time there is a degree of general weakness, loss of appetite, and giddiness, and a discharge of dark color from the vagina; whilst the flock is driven from fold to fold, the affected sheep loiters behind and staggers in her gait, the head is carried downward, and the eyelids partly closed. If parturition takes place during this stage of the disease, and the animal is kept warm and carefully nursed, recovery will frequently take place in two or three days; if, on the contrary, no relief is afforded, symptoms of a typhoid character present themselves, the animal is found in one corner of the fold, the head down and extremely uneasy, the body is frequently struck with the hind feet, a dark-colored fetid discharge continues to flow from the vagina, and there is great prostration of strength. A pair of lambs are often expelled in a high state of putrefaction, and the ewe down, and unable to rise; the head is crouching upon the ground, and there is extreme sensibility; the skin may be punctured, and the finger placed under the eyelids without giving any evidence of pain. The animal now rapidly sinks, and dies often in three or four days from the commencement of the attack. Ewes that recover suffer afterwards for some time great weakness, and many parts of the body become denuded of wool.

Treatment.—The ewe immediately noticed ill should be removed from the flock to a warm fold apart from all other sheep, and be fed with oatmeal gruel, bruised oats, and cut hay, with a little linseed cake. If in two or three days the patient continues ill, is dull and weak, a dark-colored fetid discharge from the vagina, and apparently uneasy, an attempt to move the lambs should be made. The lambs in a great majority of cases at this period are dead, and their decomposition (that is, giving off putrid matter) is a frequent cause of giddiness and stupor in the ewe. If the os uteri (the entrance into the uterus) is not sufficiently dilated to admit of the hand of the operator, the vaginal cavity and os uteri should be smeared every three hours with the extract of belladona, and medicine, as follows, given:

Calomel	8 grains.
Extract hyoscyamus	1 drachm.
Oatmeal gruel	8 ounces.

Mix, and give two table-spoonfuls twice a day.

Epsom salts	8 ounces.
Nitre	½ ounce.
Carbonate of soda	2 ounces.
Water	1 pint.

Mix and give two wine-glasses full at the same time the former mixture is given. Let both mixtures be kept in separate bottles, and well shaken before given. The bowels being operated upon, omit both former prescriptions, and give the following:

Nitre	½ ounce.
Carbonate of soda	1 ounce.
Camphor	1 drachm.
Water	8 ounces.

A wine-glass full to be given twice a day.

Feed the ewe principally upon gruel and milk or linseed porridge. Parturition having taken place, the uterus should be injected with a solution of chloride of lime, in the proportion of a drachm to a pint of warm water, and repeated twice a day whilst any fetid discharge from the vagina remains.

Egyptian, or Mummy Corn.

PERHAPS the most wonderful and interesting specimen of the earth, in a late horticultural exhibition, remarks the New York Evening Post, was some Egyptian Corn, raised in the garden of Gen. Wm. H. Summer, of Jamaica Plains, and kindly sent by him for exhibition, thus giving thousands an opportunity of seeing one of the greatest curiosities within our knowledge. The seed from which this corn was raised, was taken from the *folds of cloth wrapped around a mummy three or four thousand years ago*, and wonderful as it may seem, after being entombed for so many centuries, like a resurrection from the dead, it springs up in new life and vigor. It is undoubtedly the kind of grain for which Joseph's brethren went into the land of Egypt—the same "corn" of which the bible speaks. It is luxuriant in its growth, and the heads resemble wheat, but are very much larger, forming in inverted conical clusters as large as the closed hand; the kernels are large and very sweet to the taste, and the stock and leaves are similar to our Indian Corn. There seems to be no reason why it may not become a valuable addition to our cereal productions, and thanks are due to the gentlemen who are multiplying it, and bringing it into notice.

Death of Black Warrior, the War Horse.

THIS remarkable war horse died lately in New York, says the Herald, at the advanced age of twenty-eight years. He was raised in Tennessee, and branded U. S. D. (United States Dragoons) on the opening of the war in Florida, where he served in the swamps and everglades to the close of that inglorious campaign; after which, for several years, he was used in the chase of wild Indians, horse thieves, border ruffians, and at odd spells, of foxes, deer and buffalo, at the various military posts on the prairies west of Arkansas. Having marched all over the country, and swam all the principal rivers between St. Augustine, Fa., and Mexico, he was in the whole of the Mexican war, and took an active part in nine general battles, having been wounded by a musket ball at Molinos del Rey, and again by a piece of shell at Chepultepec. Peace being restored, Major Morrill was unwilling to part with his faithful companion in arms, who had borne him successfully through two wars, from the grade of Second Lieutenant to Brevet Major, or to break him down with more service; and so he brought him north, and placed him on a "retired list" for life, in this city, with full rations, where he has been cared for at the stables of Disbrow, the equestrian professor. He was ridden by Kossuth, and also by President Pierce, on occasion of their triumphal entries into the city of New York, a few years since, and usually ridden by General Sanford, on the Fourth of July, and often by Col. Duryea, at the head of his famous Seventh Regiment. He was never in harness, but was unequaled for discipline and grace of movement under the saddle; very fond of music, knowing his place, and the word of command, and the bugle call, quite like an old soldier; was never sick or lame for a day, or known to fall or stumble; and was remarkable for his great powers of endurance, keeping fat on prairie grass on long marches; a fine blooded animal, of medium hight and weight, perfectly symmetrical and beautiful in form, clean limbed, small head well formed, bright, quick, handsome eyes, large thin nostrils, red as fire when distended; very spirited, yet kind and gentle, and very knowing, and possessing a greater number of good points than any other of his cotempories in the long line of his service, all of whom, perhaps, he outlived. Black Warrior may well be classed along with Bucephalus, Copenhagen, Old Whitey, and other celebrated chargers that have "said among the trumpets, Ha, ha, and smelt the battle afar off, the thunder of the captains, and the shouting."

Value of Race Horses.

THE price fetched by the 200 blood yearlings which are usually brought to the hammer in England, averaged during the racing seasons of 1854–55, about $635. The average price at the royal sale of 1854, was $2,205 for fourteen, many of which were of the Orlando blood, which fetches a higher price than any other in England. No doubt, in all studs, great loss is sustained by a certain proportion of the young stock, which promise to be small and not worth training; but here breeders are often deceived. For example, the late Lord Grosvenor sent Meteorn, the best mare in England, of her day, to Chester Fair, when two years old, to be sold, untried, for $25, but purchased her again. The great prices, however, occasionally paid to breeders for some horses —$20,000, for example, to the Earl of Jersey, for Mameluke, and $17,500 for Bay Middleton—make up for the loss inseparable from such as by mishaps, diminutive size and casualties, are culled out and sold for what they will bring, which seldom amounts to much. Twenty-five thousand dollars was refused for Plenipo; and the greatest price ever given for a race horse was $32,300 for the two year old Hobbie Noble, in 1851. One may, however, cease to wonder at such prices, when we find that the Flying Dutchman won his owner nearly $100,000 in stakes alone; and that the winnings of himself and his half brother, Van Tromp, who belonged to the same owner, amounted to $170,000. Cotherstone won, at three years old, $63,825; West Australian, $54,875; and Surplice, $51,875.—[Southern Planter.

THE Boston Medical Journal mentions the following simple and economical apparatus for overcoming bad odors, and purifying any apartment where the air is loaded with noxious materials. Take one of any of the various kinds of glass lamps—for burning camphene, for example—and fill it with chloric ether, and light the wick. In a few minutes the object will be accomplished. In dissecting rooms, in the damp, deep vaults where drains allow the escape of offensive gases, in outbuildings, and in short in any spot where it is desirable to purify the atmosphere, burn one of these lamps. One tube charged with a wick is sufficient.

The rancheros in the Sacramento valley, when out searching for their cattle, carry with them their telescopes, which enable them to "sweep the plains" for miles around, and save the time and trouble required to ride up to each separate herd.

The People's Line of Steamships.

MOST cheerfully do we give space for the publication of the Constitution of the new Steamship Company, with the Address of the new Board of Directors and their Prospectus.

We hold that all who love the best interests of our State will give this great work their earnest support, and join to establish a People's Line that shall indeed work for the People's good. The opening of such a Line of Steamships would secure within three years, in all probability, *an immigration of one million people to our shores*:

INTRODUCTION.

In submitting the following Prospectus to the Public, for a new Steamship Line between San Francisco and New York, and New Orleans, it is not improper to state, that among the many causes which have retarded the growth and prosperity of our State, none have been more potent than the monopolies of ocean steamship companies, which (having no proper interest in the successful growth of our country) have, in the transportation of passengers to and from our shores, not scrupled to extort from them an exhorbitant return upon the capital invested, even while it is palpable to all that the best interests of our State are suffering in consequence.

Enormous and ruinous rates of passage have been exacted, lessened at times by temporary and spasmodic contention between the established lines, to be followed only by still more extravagant extortions.

Our people are at last awakened to the necessity of action in this matter, and are resolved to shake off the incubus which has so long oppressed them. A steadily increasing immigration is our only guaranty of future greatness as a State.

But how is this to be obtained? Speeches in Congress are in vain! Immigration societies, with the present rates of passage, are useless; the Pacific Railroad is too much the work of time—all plans and schemes yet devised, have been of no avail.

What we want above all other things, is a safe and speedy means of transportation to our shores, and at rates which, while being fixed and uniform, shall yet be within the means of all.

To accomplish this, a line of Steamships must be established by our own people, seconded by our own capital, and combining with a fair return for money invested, the nobler object of contributing to the growth, wealth and lasting prosperity of our State.

At present, the man of family in the Eastern States can go west, purchase and settle upon a farm, for the mere passage money necessary to land himself and family upon our shores; while thousands of farmers and mechanics in Europe, who would gladly fix their homes among us, find it impossible from their scanty gains, to amass the sum necessary to convey them hither.

Let us once have a line of Steamships established which shall place the rates of passage within the reach of all industrious and energetic men, and an immediate and permanent tide of immigration will set in to our shores not only from our own old homes in the East, but from every part of the globe where industry, energy and talent seek a more enlarged scope for the exercise of their abilities, or a more certain reward for their exertions. Then will our valleys and hillsides be dotted with the cheerful homes of happy husbandmen; then will our mines yield forth to sturdy arms their stores of untold wealth; then will fair cities spring up on every side, and on the once far-off Pacific Slope will rise up a nation unequaled in the annals of the world for wealth, power, or splendor. In order to accomplish this it is proposed to establish a People's Line, and to construct steamships larger, stronger, and better in every respect, than any ocean steamers now afloat, and of a sufficient speed to make the passage between San Francisco and New York in fifteen days.

The plan of these steamers, as may be seen by the following prospectus, is to embrace all modern improvements in ocean steamers, together with the new improvements in double motive power and four wheels, which has been practically demonstrated as being a plan whereby a much greater speed, security against detention, and economy in fuel are obtained, over the present system of one pair of wheels, and is now indorsed by eminent ship-builders and scientific men in the United States.

Finally, it is believed that this enterprise will prove highly profitable to the Stockholders, as well as beneficial to the State; for, as will be seen by reference to the prospectus, in addition to the ordinary dividends of the Company it is proposed that each stockholder shall have the privilege of using or selling one Ticket for passage each year for every share of stock; thus, while creating each shareholder, to some extent, an agent of the Company, it secures to all a dividend of at least twenty per cent per annum upon the investment, in addition to the regular dividends of the Company.

E. S. HOLDEN, Stockton.

JAMES LUDLOW, Secretary.

SAN FRANCISCO, April 30, 1857.

PROSPECTUS.

It is proposed to organize a Joint Stock Company, and incorporate the same under the Constitution and Laws of the State of California, by the name and style of the *California and New York Steamship Company*, with a capital stock of One Million Dollars, to be divided into Four Thousand Shares of Two Hundred and Fifty Dollars each.

The object contemplated by the organization is, to establish a People's Line of first-class Steamships on the Atlantic and Pacific Oceans, for the transportation of passengers, freight, express and mail matter, between San Francisco and New York, and New Orleans, via Panama, unless future developments should render a change to Tehauntepec or Honduras, or some other route, desirable.

It is proposed to commence the enterprise by building two Steamships, one for the Atlantic and one for the Pacific Oceans, each of the following dimensions, viz: 425 feet keel and 54 feet beam, after the most perfect models, and embracing all recent improvements which add strength, security and beauty to ocean steamships; to construct them with ample accommodations for 3000 passengers, and 1000 tons of freight; the motive power to consist of two beam engines, with two sets of wheels (see engraving annexed), constructed in such a style, and located in such a manner, as to obtain a vast increase in speed, insomuch that, it is confidently believed, the passage between San Francisco and New York can be accomplished in fifteen days' time.

Late improvements in engines and boilers will also be adopted, by which the consumption of fuel will be very materially lessened—thus effecting an important saving in this chief item of expense on the Pacific Coast.

The Ships will combine the new improvement of iron diagonal braces, and iron bulkheads, dividing each into four water-tight compartments, so that in the event of injury from grounding or collision, the hull cannot sink. They are also to be built precisely alike, thus insuring to the traveler the prominent advantage of uniformity of accommodation on each vessel.

The passenger accommodations are to consist of but two departments, Main Cabin or Saloon, and Second Cabin; the Main Cabin to have 350 feet of uninterrupted length, and to contain 126 state-rooms, sixty-two of which are to be double-bedded and of extra size; a skylight with movable windows to run the entire length of the saloon, thus affording the most perfect method of regulating ventilation. The Second Cabin will be arranged with family rooms and distinct apartments for ladies and children, and the entire plan will be upon a system of the most thorough neatness, proper ventilation and ample room.

The plans of these Steamships have been drawn and are at the Office of the Company, 124 Montgomery street, San Francisco, at which place they may be seen.

They have been arranged with special reference to the carrying of large amounts of merchandise; the great size of the Ships allowing the freight to occupy the space usually devoted to steerage passengers—within which, at least one thousand tuns can be safely stowed, which it is proposed to carry at greatly reduced rates.

The plans fully exhibit the advantage arising from the independent working of the engines, etc., by which greater security is guaranteed against detention by derangement of machinery, fire, or a lee-shore.

At the same office may be seen proposals from eminent ship and engine builders of New York, from which it is ascertained that the Ships can be built at a price within the specified capital stock, including disbursements necessary to deliver one Ship at Panama, and leave a sufficient surplus with which to purchase coal and provisions. The Steamers can be built and placed on the route, one at New York and one at Panama, within nine months from the time of their commencement, and assessments will only be made as the construction of the ships progresses.

It is proposed to establish but two prices of passage, and at the following rates, viz: First Cabin $150, Second Cabin $50; thus by the establishment of a fixed scale of prices, the traveler will avoid the disappointment and annoyance so often experienced by the fluctuating rates of passage, and at a cost comparatively small will be enabled to prosecute his journey upon a ship of unexampled size, perfectly ventilated, having all the comforts of a first-class hotel.

It is ascertained that the Company can well afford to carry passengers at the above rates, and make all the money that can reasonably be asked for; although the Steamers will have accommodations for three thousand passengers, yet if they only average five hundred, they will net the shareholders a fair return on their investment; but it is a well established fact, the lower the rate of fare, the greater the increase of travel—therefore, the Company may reasonaply expect to average a much larger number of passengers. It is but natural to shrink from crossing the seas in small, slow and crowded ships, and doubtless all have, to a greater or less degree, experienced difficulties in procuring comfortable accommodations upon the ships now in use, especially while in the tropics. It is believed that a voyage from California to New York, performed on the Ships of this Line, if not actually a pleasure trip, will be, at least, far more comfortable than could be obtained upon any other line, while the facilities for the rapid transmission of treasure, freight, express and mail matter, are so far superior to all others as not to require further mention.

The advantages these Steamers will possess over the present lines, are as follows: First—A much larger capacity for the same expense of sailing. Second—A great increase in speed with the same given quantity of fuel. Third—Greater safety and security against detention. Fourth—Superior accommodations to any Ocean Steamers ever built.

In order to identify this enterprise more fully with the vital interests of our State, it is proposed to obtain as many shareholders as possible, and to give the people of California the privilege of taking the entire stock—and as an inducement to the taking of stock, the following right is extended to each, viz: every certificate of stock of $250, upon being presented at either of the Company's offices, shall be entitled to receive, annually, one Second Class ticket, and every three shares of stock shall, in like manner, entitle the holder to one First Class ticket for a passage to or from New York or San Francisco, on any ships of the Company. The holder of such ticket may use or sell the same at his option, thus enabling him to realize an immediate return of twenty per cent, upon the amount invested.

It is a fundamental feature of the plan proposed to embrace the ownership of the entire route within one common interest, and under the direction of a Board chosen by the stockholders. The increased energy, economy and security, will at once be obvious to all in its practical workings and pecuniary results.

The advantages arising from the carrying out of the proposed plans and organization, may be stated as follows:

1st. That the people of California will themselves own and control the line, and the dividends will serve to enrich our own citizens, rather than those of other States.

2d. The stock being distributed among all classes, and in all sections of the State, the line cannot be otherwise than popular, and the investment must prove highly remunerative.

3d. The price of passage being fixed, persons residing at a distance will know as well when at their homes, or in the mines, what it will cost, as when they arrive at the office of the Company.

4th. The rate being low, all will have an opportunity to emigrate with, or send for their families, without using up the savings of years in passage-money. This will induce an increased emigration, and enable thousands, who are now here, to send for those they have left behind.

5th. That the Steamers will possess unparalleled accommodations, will be of great strength, of high speed, entirely safe, and as far as human foresight can devise, secure against delay—for should one engine fail the vessel has another, with other wheels, ready to prosecute the voyage.

CONSTITUTION OF THE
California and New York Steamship Company.

Article 1. The corporate name and style of this Company shall be "The California and New York Steamship Company."

Art. 2. The objects of the Company shall be the navigation of the Atlantic and Pacific Oceans, and such bays, gulfs and rivers, adjacent thereto, as may be necessary to carry out the designs of the Company, for the purpose of transporting passengers, freight and mails between the ports of San Francisco, New York, New Orleans and such other ports as may be deemed advisable.

Art. 3. The capital stock of the Company shall be One Million of Dollars, divided into Four Thousand Shares of Two hundred and Fifty Dollars each.

Art. 5. The stock, property and concerns of the Company shall be managed by fifteen Directors, who shall respectively be stockholders in the Company, and a majority of whom shall be residents of this State, and who shall, except the first year, be annually elected by the stockholders.

Art. 6. No person shall be a Director, unless he hold, and in his own right, at least three shares of the stock of the Company.

Art. 7. The principal office of the Company shall be in the City of San Francisco, which is the port where the principal business of the Company is to be transacted.

Art. 8. The Directors of the Company shall not pledge the credit of the Company to an amount exceeding fifty per cent. of the capital stock thereof.

Art. 9. No contracts for the construction of steamers shall be entered into by the Directors until an amount, equal to one-half of the capital stock of the Company, shall have been subscribed and twenty per cent. of the same paid in.

Office of the Company, 154 Montgomery street, corner of Sacramento.

Steam Navigation Company's Steamers.

MUCH has been said about monopolies and oppositions and combinations and people's rights, &c. &c., but there are such things as *just rights*; and of these we have a word to say.

For nearly three years there has been quite a hue and cry about the Steam Navigation Company's Line, as a terrible monopoly, compelling the people to pay exorbitant prices, &c.—and we believe for as many years as this Company has existed we have always endeavored to speak of the Combination fearlessly, and urge such measures as would tend to public good, although constantly the recipient of courtesies as an editor.

This Combination have now been in operation some years, and what have they done to secure a complete control as a combination company? They have managed to purchase all and every steamer, good, bad and indifferent—many of them dangerous to life and property—and remove them from every route; thus securing the trade and travel to their own line. This was done at the very highest cost—sometimes two, three, or four times the value of the boats that set up the opposition. The amounts which have been paid would seem incredulous, could it be known, and nothing but a wise and most skillful management could have saved a company, under such expenditures, from bankruptcy.

This Company is now successfully established, and it is but just, while speaking of them as a monopoly, to ask what such a monopoly has done. We answer—by thus establishing one line, all old and worthless, all slow or dangerous boats have been broken up or removed, and now lay as receiving ships, up river. By this measure, a greater security of life and property has been gained; a more rapid speed of travel has been secured, and with safety; and a class of steamers that cannot be surpassed for speed and elegance on any river in the United States, and to speak of the skill of the officers and men, it is no flattery to say they are never excelled. To the able management of the President and Board of Directors, through several years of immense expenditures and peculiar trials which have been nobly surmounted, the present prosperous state of the Company is attributed, and if there are those who believe the present rate of travel is too high we ask them to consider the difference between the present rates and the splendid steamers now on the route, to poor and dangerous boats, as only a fair and just insurance to life and property. When we look back and see how many thousands are daily carried safely upon this elegant line, we ask which is best for the entire country—cheap fares and miserably dangerous boats, or the present rates and such steamers as the Antelope, New World, and the Surprise, or even any of the boats that run on the line?

It has been our pleasure to pass up and down the river many hundred times, and receive many courtesies, and meet many thousand travelers, and from all the facts we can gather we are satisfied that the public are largely the gainers in the security of life and property, and in general comfort and economy also, and whatever may be the profits now gained, or whatever may be the power and influence of the Combination, we believe they are so well posted about their own *interests* that they will *voluntarily*, of their own free will and accord, reduce the fare and freight, as soon as they can do so consistently with their own security, in running as they now do only first-class steamers. We believe that the Company mean to do this as soon as it can be made a permanent thing. We hope all who view the subject will do so in the proper light, free from prejudice or self-interest, and in the light of a great public enterprise, the success of which depends upon a wise and judicious foresight. For it must appear self-evident, that nothing but such a management could have kept up and sustained such an enterprise so long; and as the public interest is promoted by such enterprises, justice requires that even great *private* enterprises that affect the public convenience should be rightfully considered and duly appreciated.

The Red Bluff Beacon thinks that Tehama county, for the growth of the cereals, has no superior in the State. For raising stock, for proximity to a market in the northern mines, and in many other respects, it is said to be a desirable locality, and besides, the physicians of the place say it is "deplorably healthy."

MY HORSE.

With a glancing eye and curving mane,
His muzzle and champs on the bridle-rein,
One spring, and his saddled back I press,
And now is a common happiness!
'Tis the rapture of motion—a hurrying cloud
When the loosened winds are breathing loud;—
A shaft from the painted Indian's bow,—
A bird in the pride of speed we go.

Dark thoughts that haunt me, where are ye now,
While the cleft air gratefully cools my brow,
And the dizzy earth seems reeling by,
And naught is at rest but the arching sky,
And the tramp of my steed, so swift and strong,
Is dearer than fame and sweeter than song!

There is life in the breeze as we hasten on;
With each bound some care of earth has gone,
And the languid pulse begins to play,
And the night of my soul is turned to day.
A richer verdure the earth o'erspreads,
Sparkles the streamlet more bright in the meads;
And its voice, to the flowers that bend above,
Is soft as the whisper of early love.
With fragrance spring flowers have burdened the air,
And the blue-bird and robin are twittering there.

Lovely tokens of gladness, I marked ye not
When last I roamed o'er this self same spot.
Ah! then the deep shadows of Sorrow's mien
Fell like a blight on the happy scene,
And Nature, with all her love and grace,
In the depths of the spirit could find no place,

So the vexed breast of the mountain lake,
When wind and rain mad revelry make,
Turbid and gloomy and wildly tossed,
Retains no trace of the beauty lost;
But when through the moist air, bright and warm,
The sun looks down with his golden charm,
And clouds have fled, and the wind is lull,
Oh! then the changed lake, how beautiful!

The glistening trees in their shady ranks,
And the ewe, with her lamb, along its banks,
And the king-fisher perched on the withered bough,
And the pure blue heaven all pictured below!
Bound proudly, my steed; nor bound proudly in vain,
Since thy master is now himself again,
And thine be the praise, when medical power
Is vile, to conquer the darkened hour—
By the might of thy sounding hoof, to win
Beauty without and a joy within;
Beauty, else to my eyes unseen,
And joy, that then had a stranger been.

[Ohio Valley Farmer.

History of Cutlery.

Our readers who are familiar with the festivals and banquets of the ancients, as described by historians and poets, will perhaps be surprised to be informed that three hundred years ago, no fork was yet invented; as the Greek word *Kreagon*—by some supposed to indicate fork—signifies a large hook, used to draw up a pail of water from a well, and also to take out boiled meat from the pot; and the Latin word *Furcillis* signifies a species of weapon, not by any means intended for domestic use. There was then not so much need of forks as in our days, the manner of cooking and eating being widely different from the present style.

Food was prepared so as to have it served up in a more fluid or pappy state—more like *sauces galees*, and *hashe*. Besides, the ancients did not *sit* at table, using both hands, as we do; but were, during their meals, reclining on their couches, and used only *one* hand in taking their meals; the use of forks, in case of need, being superseded by the more handy ones—the five fingers. Neither were knives in use, except in the hands of the steward of the house, who was called "Carptor," and for whom rules were laid down, concerning the management of the board.

Bread was always broken—never cut. The crackers of our day resemble the bread of the ancients.

Spoons were in more general use. They are mentioned in the Bible as one of the movables of the Tabernacle. But that the five fingers were in "large demand" for eating, is plainly understood, as well by a passage of Homer in his *Odyssy* XIV, as by Ovid's poem, "The Art of Love," in which the latter describes how to use the fingers at meals, not to have the hands and mouth unclean. Therefore, washing the hands and mouth, during meals, was a general habit with the Greeks and Romans. Certain it is, that forks were not discovered and introduced earlier than the fifteenth century, and Italy was the foremost in its usage.

The Italian historian Marcus, in his biography of King Mathias Corvinus, of Hungary, mentions the fact, that in the year 1470, there were no forks used in that country, as in Italy, and that King Corvinus nevertheless actually knew how to manage to keep his hands clean.

In France forks were considered a luxury until the last century, and even then, in most of the hotels, there were only spoons on the table, and the guests actually had to use their own pocket knives. For that reason it was customary with travelers to carry a set of knives, forks and spoons.

In England, forks were so little known that, in the year 1608, Thomas Coryate, returning from Italy, and endeavoring to introduce these useful implements, was sneered at by his countrymen, and obtained from them the soubriquet of *furcifier* (fork liker, or fork maniac).

Thus it is not to be wondered at that the celebrated German tourist, Fischer, did not find forks in Spain and Portugal, in the year 1797, and that in Sweden they were at this time a great rarity. We know that the Chinamen do not use forks even in our day, and the little sticks of ivory (chop sticks) serve to supply all purposes. A similar apparatus may perhaps have been also known to the Romans, which was only a flattened spoon.

We at this time confine our remarks to table cutlery, which renders eating, in our age, a clean business. We pass over other instruments of this branch of industry, which are of vast importance to mankind—as surgical instruments, and others for domestic and business use, whose merits are by no means less appreciated. Who, for instance, would deny the great utility of razors, if reminded of the wonderful influence of shaving on civilization (barbarism being everywhere faced by legions of barbers), and on calling to mind the profit made by the like operations, in commercial circles? Although the rising generation indulge in the fashion of "patriarchal beards," their potentiality in the cure of consumption, and to impart respectability, has yet to be proved to be generally adopted by persons who are afflicted with palms of itching palms, and by those who have to make good by appearance the fickleness of character.

Who is not impressed with the vital importance of scissors, in the dress line trade—(the editorial business not to be mentioned)? It is needless to remind the reader that a pair of scissors enables a tailor to transform a boor into a perfect gentleman—in appearance; and that in the hands of a skillful artisan, this simple instrument serves, oftentimes, to "improve nature" with the fair sex, and to bring forth bodily charms which were never dreamed of by the most learned anatomist and philosopher.—[L. R. B., in the Inventor.

"Jerry"—A Dog Biography.

To look at Jerry's countenance, gentle reader, you might suppose, perhaps, at first sight, that there is nothing very handsome, or remarkably intelligent about *that* dog; but lest you might unintentionally do "Jerry" an injustice—at least in thought—we ask you just to satisfy your conscience as well as your curiosity, to take another look at him.

That's right. Now we can proceed with our biography with a good grace; for, although he is rather "homely" looking, we know him to be considerable of a dog, notwithstanding, and we shall hope to make the reader a ready convert to our opinion of him before we get through.

"Jerry," then, is a native of the city of Nevada, and is, consequently, a native Californian; owned by Mr. Henry Dawley, of Nevada (more generally known as Hank Dawley), by whom he was raised. His maternal parent was about half spaniel and half Scotch terrier; and his paternal parent was a full blooded bull terrier. He is now about four years old.

"Jerry" is a general favorite in and around his native city, and although he signifies his appreciation of pats or words of kindness, by a gentle wagging of his tail, he neither follows nor obeys any one but his master.

The first time we saw him, Mr. Dawley requested him to go and shut the door—which was wide open, and against the wall—when he immediately put his nose behind it and closed it; but as it did not "catch" he raised upon his hind legs and threw the whole weight of his body against it, and thus effectually shut it.

"Go, sit down there, Jerry," said his master; and he immediately went to the spot indicated and sat down. "Sit up, Jerry," and up he sat. "Stand up Jerry, and come to me," and what appeared to us as very singular, he arose from his sitting posture and stood erect upon his hind feet, and then walked in an erect position to his master.

"Lie down and die, Jerry." He immediately lay down at his master's feet, and closed his eyes, and appeared like one dead; when Mr. D. slipped his right hand under one side and his left under the other, about his middle, as he lay upon the floor, to lift him up; and the dog did not move a muscle or limb, but his body hung down as helplessly as though he were really dead.

"Up Jerry," and he soon let us know that he was worth a dozen dead dogs. "Take a chair, Jerry," and he was soon seated in the only vacant chair in the room. "Now, wink one eye, Jerry," and one eye was accordingly "winked" without ceremony. Jerry, however, did not enlighten us upon the subject of having practised this ungentlemanly habit, when passing some of his canine lady friends in the public streets! but perhaps thinking that this might be used to criminate himself, he only wagged his tail by way of answer, which simply meant either yes or no—just as we pleased—to our interrogations.

He used to be very fond of these amusements, until he saw a little quarrelsome dog against whom he had taken a dislike, practicing the same tricks, when he evidently became disgusted, and very reluctantly obeyed his master, for some time afterwards.

Mr. Dawley is the owner of some mining claims on Wet Hill, and resides near them; and as they are worked both day and night, whenever the time arrives to 'change the watch,' he will say to the dog, "Jerry, go and call Ben," (or any one else, as the case may be, for he knows every one of their names distinctly), when he immediately goes to the cabin door of the man wanted, which is left a little ajar, opens it, and commences pulling off the bed clothes, and if this does not awake the sleeper, he jumps upon the bed and barks, until he succeeds in his undertaking.

If a candle goes out, in the tunnel, it is placed in his mouth, as shown in the engraving, and he goes to the man named, to get it re-lighted.

About a year ago, when they were running their tunnel, he would lie down at the entrance and allow no stranger to enter, without the consent of his master; but when told by him that it was all right, he not only appeared pleased, but barked at a candle that was sticking in the side of the tunnel, when his master lighted it, placed it in his mouth, and said to him, "show this gentleman the diggings, Jerry" and he directly started, with his lighted candle, and led the way into every drift.

There is a shaft to the diggings, something over two hundred feet in depth, and should he want to go down at any time, which he often does, he goes to the top, and, on finding the dirt bucket up, will without hesitation jump in, entirely of his own accord, and descend to the bottom.

Mr. Chambers, an inmate of the cabin in which Jerry was raised, and who knew him from a pup, entered for the purpose of getting a coat, but when he took hold of it, the dog began to growl, and would not permit him to take it out, in the absence of his master, and he had, after considerable coaxing, to leave without it. He allows the washerman to enter the cabin on a Saturday, with the clean clothes, but as the man takes one chair he immediately takes another chair opposite, and sits watching him until his master enters; nor will he by any means allow him to take away again, even the clothes he brought with him.

If men are sitting and conversing in the cabin, he will take a chair with the rest, and, what is somewhat remarkable, he always turns his head and keeps looking at the one who is speaking, as though paying the utmost attention. We might suggest an imitation of Jerry's good manners to older heads than his, with much less sense within them;—especially when present in a church or lecture room—but we forbear, except to ask, that whenever they become listless at such times, and in such places, they always think of Jerry!

Jerry, too, is "general carrier," for his master, and goes to town each morning for the daily papers. On one occasion he was carrying home some meat, when a much larger dog than he sallied out upon him, to try to steal it from him, but he took no notice of him, except to keep his tail near the enemy, and his head (with the meat) as far away as possible; but, when the large dog supposed Jerry to be somewhat off his guard, he made a sudden though unsuccessful spring at the meat, when Jerry, as if *struck* with a new idea, immediately started home as fast as possible; and after he had deposited it safely in the cabin, he returned to town, and gave his thieving disposed brother a good sound whipping; now, the enemy has a great preference for the opposite side of the street whenever he sees Jerry coming up.

Whenever his master goes to town, the dog stands watching him at the door, and never attempts to accompany him, without a look or a nod of acquiescence. If Mr. D. purchases a pair of pants, or gloves, or anything else, immediately after arriving in town, he will say to him "Jerry, you see these are mine," and place them on one side; and after remaining an hour or two in town, and going to different places—sometimes to the theatre—he says, "Jerry, I guess I'll go home now," when the dog starts off directly for the parcel left, and appears with it in his mouth, wagging his tail, as much as to say: "here we are, is this right?" He always remembers very correctly where it was left for him.

About noon, on Saturday last, his master said to him: "Jerry, I don't want you to go with me this afternoon, as Mrs. Houston wishes you to go to town with her;" when he lay quietly dow and never attempted to move, as he general does, to accompany his master to his work. He waited very patiently, until Mrs. H. was putting on her bonnet, when, taking up a small parcel which he had seen her place upon a chair, he waited with it in his mouth until she was ready to go, and then followed her down. When in town, Mrs. H. bought a bonnet box, about fifteen inches square, with a handle on top; and said to him: "Jerry, I want that carried home," when he took the handle in his mouth, to try to carry it, but as it extended up to his breast, and prevented his taking his usual step, he set it down again, when she said: "never mind Jerry, if that is too much for you, I will send for it;" he immediately took it up, and although he could not lift it more than two inches from the ground, he carried it all the way home for her.

He will lift at a sack of gold dust, until his hind feet are both several inches from the floor. If sent to a store across the street for a jug of liquor, and he cannot carry it, he will be sure to drag it over, if at all possible, and never mistake an empty one for a full one. When his master asks him to fetch his socks, or his boots, or his hat, or coat, or anything else, he never gets the wrong article, as he has a good memory to remember the names of everything told him.

To see what he would do, several men, with his master's consent, tied a string and pan to his tail, but instead of running off as most dogs would do, he turned and bit the string in two; then took hold of the string and dragged the pan along. He will go up and down a ladder by himself. If several men are in the cabin, and his master on going out should tell him not to leave it, all of them combined would not be able to coax him out.

He is very fond of music, and will walk about for hours, wagging his tail, whenever Mr. Curtis (a miner living in the same cabin) plays upon the banjo; and sometimes he would run around, catching at his tail, and barking, when the music ceased.

"Jerry" has more friends than any man in town, as everybody likes him for his good-natured eccentricities, intelligence, and amusing performances. He sleeps at night in an arm-chair, near his master's head, and seems to love and watch over him with the utmost fondness and solicitude. If, however, the blanket upon which he sleeps is thrown carelessly into the chair at night, or is not perfectly straight and smooth, he will not attempt to occupy it until it is made all right.

Many, very many other performances of interest could be related, such as picking up money and carrying it to his master; catching paper in his mouth, if placed upon his nose; taking off his own collar; unfastening ropes with his teeth; jumping over chairs; carrying away his master's gloves on Saturday night, and returning them on Monday morning; standing in any position told him; fetching anything asked for, etc. etc., almost *ad infinitum*. But we think that we have said sufficient to prove that Jerry is an intelligent dog; and yet, some persons, with more vanity than veneration, will persist in believing that God's works are not as perfect and as beautiful as they are, by asserting that "dogs have no souls," while they admit them to possess all the attributes of intelligence—except in the same degree—as those found in men; and we must say that we have witnessed more true nobility of *mind* in some dogs, than we have in *some* men. [Hutchings' Magazine for May.

Moore's Diggings.—Mooresville is situate in Butte county, between South Feather river and Lost Creek, and from developments that are being made, bid fair to equal, if not surpass the far-famed wealth of the neighboring mining section of Rabbit Creek.

Two ditches are in contemplation for supplying this locality with water—one from Lost Creek and the other from South Feather river, at an estimated cost of $12,000, and $40,000, respectively. The Lost Creek ditch is, at present, under contract and will probably be completed by next October. The Feather river ditch will not be completed till late in the following year, and will be, for the greater portion of the distance a flume.

There are both hill and ravine diggings in this vicinity. Many claims are at present paying largely with a scanty and irregular head of water, and the old fashion style of working.

Tinder and Alley's hill claim paid 25 ounces of fine gold, in six days working, last week. May, Moon and Thompson's hill claim paid $182, in two days working; the first work done since opening their claim. The Irish claim on Queen's Creek, is paying from six to twelve hundred dollars every two weeks. Harrold & Co., on same creek, above the Irish claim, is paying from $12 to $16 per day. Denton, Welch & Co., have run a tunnel into the hill 300 feet through solid rock, and have struck gravel that prospects from 5 to 20 cents per pan. The gravel is from forty to fifty feet in depth. The entire ridge between Lost Creek and South Feather river, prospects well from the surface to the bed rock, about fifty feet in depth, and with an abundant supply of water, will pay enormously.—[Butte Record.

Health of Americans.—De Bow's mortality statistics, compiled from the last census, show that the people of the United States are the healthiest on the globe. The deaths are three hundred and twenty thousand per year, or one and a half per cent. of the population. In England the ratio is near two per cent., and in France nearly three per cent. Virginia and North Carolina are the healthiest of the States, and have six hundred and thirty-eight inhabitants over one hundred years of age. These figures, however, may all be reversed by the next census, for the medical schools were never more flourishing, twenty-six colleges have graduated last year, about thirteen hundred doctors.

If Queen Victoria gave Prince Albert a kiss, and he returned it, what public building would it be like? Ans. Royal Exchange.

Why is a horse constantly ridden, and never fed, not likely to be starved? Ans. He has a bit always in his mouth.

In what respects were the governments of Algiers and Malta as different as light from darkness? Ans. One was governed by Deys, the other by Knights.

PROSPECTUS
OF VOLUME VII.
OF THE
CALIFORNIA FARMER.

THE CALIFORNIA FARMER was established in January, 1854; its success was a problem that the future only could solve. Like a ship upon a voyage of discovery in a new ocean, seeking for prosperous winds, so our journal unfurled its sails to catch the favoring breeze. Like the pioneer farmer who turns the virgin soil in a new country, expecting to meet with rocks and roots and impediments, that shall try the temper and strength of his breaking-up plow, so we with our Pioneer Farmer expected to meet with obstructions, trials and difficulties, that would try our strength and temper too. But like the commander of the ship, who, knowing his craft, has faith in her power to endure the storms he must meet, and confident he himself can endure them; and like the pioneer farmer, who, loving his labor, is willing "to do and to suffer," confident he shall eventually reap a glorious harvest where good seed has been planted—so our humble selves in the enterprise of the journal we then presented, we had faith—we were willing and ready to labor and toil—to do and to suffer—confident that ere long the goodness of the cause we had espoused, its happy and beneficial influences, with dignity, nobility, and prosperity would eventually crown the true farmer's life in California; this served as the beacon star that led us on through stormy seas, tempestuous gales, past rock-bound coasts, to the smoother ocean and gentler breezes that now surround us.

To those that know our journal, those that have marked our course and known the labors we have bestowed and the influences that we have endeavored to exert for good—to them we and our cause are known—our desert at their hands is manifest.

To those who are strangers to us and the journal we publish, we again present the California Farmer.

Our journal is devoted to Agriculture and all the useful sciences—it will ever be our aim to have the Farmer the true exponent of the Agricultural, Manufacturing, and Mechanical Interests of California, the TRUE friend of the Home Industry of our State.

The California Farmer will always take a deep interest in the cause of Education, and every influence that tends to establish, build up and make prosperous the Homes of our glorious State. Free from every political, sectarian, or local bias, the Farmer will ever be an independent paper. No mercenary interest or influence can ever tempt us to forget the cause we advocate; nor can any personal wrong or prejudice against us cause us to forget the duty we profess to plead.

To our Friends and Patrons we can now say, that our means of usefulness have been largely increased, that we have now communications opened with all the principal Agricultural Societies and Journals of Europe and our own country; that we have the aid of the best contributors in every department of our journal, and this aid is rapidly increasing; that our Farmer is circulated largely in the Eastern States and Europe, and no section of California or the Territories where it cannot be found.

Known as we are, abroad and at home, in our exchanges and periodicals, with every valuable publication, we have access to facilities for information rarely obtained.

In the department of Education, of Home Influences, we are honored with the aid of the best female talent of the day, and this department we are assured will be largely increased during the year.

Cultivators of the Soil, Manufacturers, Mechanics, Artisans, and all who feel an interest in these great fundamental sources of prosperity and happiness, are cordially invited to correspond with us; their aid we shall esteem most valuable.

As a Family Journal, as a journal for all classes, we believe we can offer one as worthy their acceptance as any journal now issued. As an Advertising Medium it is fully equal to the best; and cheerfully we offer it in comparison, and abide the issue.

With grateful acknowledgments for a generous sustaining in years of trial, and with the assurance to our patrons of many improvements in the opening year, we ask their continued favor and generous influence for this journal.

The terms of the Farmer are, for the year (always in advance), $5.

Offices of Publication—130 Washington street, San Francisco, and State Society's Rooms, Fourth street, Sacramento.

WARREN & CO., Editors and Publishers.
January, 1857. 4t

The California Farmer.

SAN FRANCISCO, FRIDAY, MAY 15, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hall on Fourth street, between J and K, City of Sacramento, where all are invited, free.

Letters and Exchanges.

Our correspondents are kindly requested to direct all letters to us at our principal office, San Francisco.

Those journals and periodicals with whom we exchange will much oblige us if they will be particular to note this, so that we may be in receipt of their favors at the earliest date.

Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco.

Our Carrier's List for San Francisco.

Having made arrangements with an energetic Carrier for the city and county of San Francisco, we invite our subscribers to please notify us if they prefer to have the Farmer left at their houses or places of business, instead of mailing. The price of the Farmer, left by the Carrier, will be placed so low as to be within the means of all our friends and patrons, and all the friends of California industry. The Farmer will be delivered to subscribers at the low price of Fifty Cents per month; and we hope every family in the county will give us their kind support and encouragement. The Farmer is now a double sheet of large size, printed on California-made paper of the best quality, and every number will contain a valuable cut, representing some important interest of our State. Mr. Welsh, the Carrier selected, will call upon the citizens of the county; and we ask the examination of our journal by them, believing they will find it a useful family paper.

State Fair at Stockton.

(A PLEASANT SURPRISE.)

By reason of the complaints of the last year, of matters at San José, and in consequence of the fixing the State Fair at Stockton, instead of Marysville as had been agreed upon the year previous, and the distance from a common centre, we had felt many doubts in relation to the success of the present year's Fair.

We have spent several days at Stockton and vicinity for the express purpose of knowing from actual survey, of persons and places, the true indices of the future, and we most cheerfully announce that we were most wonderfully surprised to find a wide-spread feeling, a universal and united feeling, of determination among the citizens of Stockton, to make the coming Fair one of the most interesting and most entertaining, as well the most social, ever yet held in the State.

We have personally met with Farmers, Mechanics, Machinists, Manufacturers of every kind, and there is but one feeling, that is a readiness to co-operate with the Executive Committee, and to do and aid all in their power to bring everything to a successful issue.

We had the pleasure of meeting a majority of the Executive Board, and were exceedingly gratified to find the earnestness, energy and promptness with which they act—without bias or prejudice, without local or party feeling, they have engaged in the work in earnest, and we know they are determined that the present State Fair shall be free from the objections that were made the past year.

Great pains will be taken to have large numbers of gentlemen in various parts of the State, who are *disinterested, yet fully qualified to act as Judges*, secured to act on the several Committees, and they will be publicly announced previous to the Fair.

The city of Stockton has appropriated one thousand dollars, the county has given another thousand, and the citizens have manifested a generous feeling and will manfully sustain the Board of Directors. The City Hall is tendered as the Exhibtion Hall, and the square around is to be graded and fenced in, on which pavilions can be erected for different departments of Industry.

The Public Hotels and other public places of resort, have pledged themselves to do all in their power to please and give satisfaction to strangers by their charges.

A Public meeting of the county will be held in about three weeks, to awaken due interest and lay and mature new plans for the furtherance of the objects.

The ladies will call a meeting to take charge of the duty of receiving guests of the Society and strangers from abroad, and to awaken a due interest in all that appertains to Domestic Industry, and to exert their accustomed influence for a higher and better social feeling towards an exhibition having for its object the building up and beautifying homes.

The lively interest felt for the Fair at Stockton will be beneficial to the Great Mechanics' Fair which is to be holden at San Francisco, on the 8th of September, and which was announced in our last issue; for we saw with pleasure several Mechanics that will prepare to compete at *both* Fairs, and we trust there will be a generous rivalry so as to make both Exibibitions useful and prosperous.

We have received the List of Premiums which are to be awarded, and shall lay them before our readers next week, and shall issue a large edition for a wide circulation. We would earnestly call upon all the friends of California Industry, upon all who wish our State to prosper, to take hold of the work and make it a personal matter.

Great credit is due to the present Executive Board, for the manner in which they have begun their work, and from what we have seen and the feeling we know exists, we promise a most successful result to the citizens of Stockton and the State.

A letter received by us from a subscriber at Stanislaus, under date of May 9, says: "Crops hereabouts are short, in consequence of the dry spring, and last night we had a frost that was very destructive to our gardens. . . . Most of the experiments I told you I was making in horticulture have been unprofitable. One, however, is doing well, namely, grafting the grape-vine on the native stock. I will tell you more about it some other time." Please do so.

Stockton Mechanics.

Stockton can truly boast of the genius and ability of her mechanics, for she will prove their power at the Mechanics' Exhibition at San Francisco, and also at the State Fair in Stockton, both of which Exhibitions are to be held in September next.

Having spent three days in Stockton, in arranging for the publication of the State Society's Premiums, and in examining the plans of the Fair, and the prospects for it, we had opportunity to visit some of the mechanics' workshops of which we hear so much, and of which all the citizens may well feel proud; for Stockton can boast of having the best wagon makers, the best plow makers, the best saddle and harness makers, the best makers of windmills and grain harvesters, the largest gang-plows, the heaviest freight wagons, the largest and finest mule teams, and the best teamsters in all creation; and the stock raisers *do* say they have the *nicest* colts and *finest* cows and the *fastest* horses that have yet been on the ground—but of this they mean to prove at the time of the Fair.

We visited the following workshops, and were much pleased with the evidences of genius, skill and industry we witnessed:

WINDMILLS.

The fancy windmills that are now in use so generally in Stockton are made by Messrs. Mills & Doll. They are light and airy, yet strong, and work well. They are used principally upon the new style of wells that are now bored so quickly and at so little cost. The whole work consists in using a two-inch auger, and boring twenty, thirty, or forty feet, from whence issues a copious supply of pure water; into these a two inch lead pipe is inserted, the windmill attached, and water is furnished in any quantity. We visited several gardens where they successfully supply abundance of water, and never fail. Messrs. Mills and Doll will make Pattern Mills for exhibition at both the Fairs.

Messrs. Hart & Derrick have also invented a new and improved pattern by which means the machinery can be stopped and protected in high winds and storms—so constructed as to guard and protect itself. We shall give the particulars of its construction at a future day. We saw one in operation at the residence of Andrew Wolfe, Esq., upon a handsome pavilion, in which was a wash-room, with a boiler for heating the water for domestic purposes, and also a fine bathing-room and dressing-room. These are improvements and comforts for the homestead worthy of note. Messrs. H. & D. will also be competitors at the Fairs.

NEW IMPROVED REAPER.

D. C. Mattison, the inventor of the gang-plow which took the premium at the State Fair at San José, has made a fine improvement in a reaper, which we saw put in operation, and which is a decided improvement and of a valuable character. The main wheel has been increased to a large size, near to a large cart wheel; the plate or frame on which the knives rest is lowered; the rod connected with the knives is moved by a single pinion instead of two, as generally used, and the rods are stronger, and bear more distinctly upon the knives; they cut easier and cleaner, and with less friction. The small or outside wheel is also to be made larger, and brought to bear close to the working-board; the whole machine being larger than Manny's. Yet it works very easily with two horses, and does a great day's work. The castings are done at the Union Foundery, Stockton; the iron-wrought work at Mr. Mattison's shop, and the wood work at his shop also, and thus this machine, so excellent, is purely a Stockton machine.

We were pleased to know that by means of the exhibition of the gang-plow of Mr. Mattison at San José, he received many orders for them, and has made and sold *eighteen*, the present season, and received from $130 to $150 each. Who will say Agricultural and Mechanical Exhibitions do no good?

HEAVY WAGONS.

Very few persons outside of Stockton, or those with whom a trade is conducted, can form any conception of the size or strength of the enormous wagons that carry freight from Stockton to the mines. For ourselves we were surprised, and do not believe that in any part of the world such large and heavy teams are used, or any kind of wagons so strongly and so perfectly made, or so excellent work put upon them. No pains are spared to make them well, and no cost is denied to have them so. We spent some time at the great wagon shop called "Miller's," who is now building a very superior one, and who will build one of still higher value and greater strength for the Fair. We saw a pair of wheels of enormous size, and handsomely finished. These alone—a pair of hind wheels—cost $175. An eight-mule wagon, nearly finished by contract, for $900; a ten-mule team in proportion for $1000; a pole-cap of the best of Norway iron, and polished, finished for a customer, cost $22. We have never seen such superior finish put upon wagon work before—the strapping of the pole, the cap, the geering or moving plate of the fore-wheels are all made of the best of Norway iron, and polished like the work of a fire-engine.

We were surprised at the magnitude and strength of these wagons; but when we saw the mules attached, eight and ten mules of the largest size—splendid animals, worth five, six, and seven hundred dollars a pair—we wondered no more, for we looked at the records of the loads they drew and found as follows: one load goods, from Stockton to Mariposa, 15,800 pounds; one load grain into the city (barley), 19,600 pounds; one load goods to the mines, 18,160 pounds. This we call teaming to some purpose, and when we see one of those teamsters with his splendid mules and his load ready for the mines, we should think he might feel about as proud as any nabob with his own coach and six, for eight or ten mules and one of these wagons is quite a little fortune. What would our down-easters say about hauling ten tons at a load—with a team worth three or four thousand dollars? But this is the way we do things in California. These are facts however, and these are the kinds of wagons Miller makes: and he has got the workmen to do it, too, and he is not slow himself. We shall see his work at the Fair.

Appreciation.

Every freeborn spirit, every true and noble heart, every cultivated mind and sensitive spirit, knows the value of appreciation, and the man devoid of self esteem to a due degree, is always wanting in self respect, and will fail of attaining in any high degree that position in society which noble resolves, high purposes and true ambition merit.

Our ambition as a journalist has been to receive from our brethren of the quill, justice according to our deserts. Separated entirely from all partisan feeling by controversy or by practice, having no wish to touch upon any subject of party, sect, or creed, or any sectional strife, but only to labor to develop the rich resources of this highly favored clime, and to awaken to a just notice those other resources which Genius and Art could make known—we could only labor on, believing the time would come when by a steady, undeviating course, our purposes could not fail of being understood and appreciated by the wise and good of all parties in all sections of our State and country. We do not desire to speak too often of ourselves, or thrust ourselves upon the notice of the public ostentatiously; but we do wish to keep the cause we plead "before the people," for we plead for the People, the *working people* of California. It is the *Industrial Interest* of California that alone can build up our State and make it great and glorious; and to the Farmer, the Mechanic, and the Manufacturer, all eyes now turn with anxiety and hope, as the means of redeeming by their industry the past loss and ruin which have been entailed upon our State. For these interests we *have* labored for more than five years of our life in California, to the best of our ability, regardless of personal fatigue, labor or cost, cheerfully sacrificing much of comfort, so that the object dearest to us be attained.

We have now the conscientious satisfaction of knowing that *we have not labored in vain*, for go where we will, over our widely cultivated State, and we see *homes*, beautiful homes, springing up on every hand, and peace, happiness, pleasure, comfort, and even wealth—the result of well-directed industry. Seeing what we see, knowing what we do, we derive a pleasure and a reward for what humble efforts we may have made for this end, far beyond what language can express or gold repay. And when we see our public journals recognizing what we have done, with a generous spirit of just appreciation, and giving us words of cheer, we are doubly repaid, for it tells us of "better times coming."

For the most generous notice of our labors and efforts in times past, which we copy from the True Californian of May 9th, we can only say it will be an incentive to still greater exertions; and to our brethren of that truly independent and manly journal, we trust they will always find comfort in this truth: "They that water, shall be watered themselves."

(From the True Californian of May 9.)

The California Farmer.—This useful and practical journal continues to make its regular weekly call at our sanctum, dressed in its best holiday suit, being printed on home-made paper. The editor is the most indefatigable friend and patron of the agriculturist it has ever been our privilege to know. We have watched the course of the paper from the start, and can truly say that we consider it a real friend to our State, inasmuch as it has done more to promote the best interests of the farmer than all other papers combined. It has opened up anew the soil, and continues to subsoil all the furrows. It is constantly enriching all within its reach, far and wide. The editor boasts having paid out the "first money for California printing paper on the Pacific coast," and we hope it will long be in his power to boast of our home productions.

It is not our province to build up other papers than our own, but we have in our possession more than one letter from the East, speaking in terms of high commendation of the California Farmer, which is, in deed and in truth, a home production, which has the genuine ring—free from all and every kind of metal of the baser sort.

The California Natural History Society of Stockton.

While on our trip to Stockton we were much pleased with a visit to the Natural History Society, now occupying rooms at the City Hall. The collection of the Society is already extensive and valuable, and remarkable when we consider that it is so young a Society. It has a fine collection of stuffed birds, preserved reptiles, minerals, shells and precious stones—and what was particularly gratifying to us to note, the following valuable products, found within their own county:

Specimens—Red Ochre, Yellow Ochre, Plaster of Paris, and Kaolin; this latter article, we believe, will be found to be equal to the best ever produced in China—Kaolin being the material for the finest porcelain ware. These four products are of great value to the county and to the State. Handsome samples were kindly sent us for experiment.

The members of this Society are all gentlemen who feel a deep and abiding interest in promoting science, and the government of the Society are those who are fully qualified as scientific men to preside over such an Institution.

Valuable Mules.—There is probably no part of California where so fine mules can be found as in Stockton, and the reason is simply that purchasers are always ready to pay *good prices* for *good mules*, and this brings the very best mules in the State to Stockton market.

The Sheep-shearing Festival.

Agreeably to the announcement in our journal, the Sheep-shearing of the flock of fine Merino Sheep of the Messrs. Whitney, took place at Sacramento, on Friday, the first day of May, at Elk Grove, some twelve miles out of the city. Quite a pleasant party of ladies and gentlemen and happy children, went up from San Francisco, on Thursday, to attend the fete on the following day—and surely there never was a fairer day than shone on that occasion, and we doubt if ever there were more happy hearts than were gathered in various groups, not only in and around Sacramento, but in all our cities and valleys over the State.

But to this particular fete. At 9 A. M. we joined the group of the proprietors, numbering four carriages and twenty guests, and had a delightful ride with Parents and Children to Elk Grove. There we found the "victims" that were to be fleeced, and the shearers ready to begin their work; and as the "lambs before the shearers were dumb," so these fine Merinos, one by one, were "laid upon the table," and fleeced. The shearers were "experts," and performed their work well. A good shearer can take off the fleece of twenty or thirty sheep per day, and do his work well—this was about the rate of the work done here. A very large and fine Buck, having a heavy fleece and heavy dewlap, required one hour and a half to accomplish the work; the fleece of this Buck was very superior, and weighed 10¼ pounds washed, equal to about 14 pounds—this was an eleven months' fleece. Many of the Ewes yielded 4, 5, and 6 pounds, all washed wool. The entire flock was free from tick, scab, or disease of any kind, and the sheep in very fine order, having improved much in their new progeny since their arrival, eleven months since. Among this flock of Messrs. Whitney were several young lambs of the Vermont stock, full blood, and very fine animals. Quite a numerous party came to witness the shearing, which was most interesting, as being the first upon the Pacific Coast.

The owners were pleased with the fine and profitable fleeces; visitors were pleased with the singularity of a Sheep-shearing in California at this early day; ladies and children were pleased and happy in the enjoyment of the scene, amid the grove and bright flowers; and we were also happy at the certain prospect of success and prosperity that was dawning upon the enterprises of our State.

At noon, a fine collation was prepared by direction of the proprietors, which was enjoyed with a good zest, after which a sweet little lassie, the daughter of G. O. Whitney, Esq., was being selected as Queen of May, and was crowned by acclamation. We had the pleasing honor to prepare the crowning wreath from the bright flowers gathered upon the prairies near by. Miss Alice Green Wood Whitney was the "Queen of the May," and, we venture to say, no fairer creature was that day crowned than was the Queen of the May party at the Sheep-shearing Festival at Elk Grove, Sacramento. As the day waned, the whole group with which we started wended its way, by invitation of Messrs. Whitney, to Smith's Gardens, where with fragrant flowers and luscious strawberries and cream, that day's work was finished while the sun shone, and it was a happy, sweet and glorious sunset and close; but from thence to the residence of Mr. Whitney the older, the party returned and enjoyed an elegant dinner, and we believe all who joined the Festival will never regret even a long journey for the pleasure and interest it secured to them. With many thanks to the Messrs. Whitney for their kind courtesy and attention to their guests, a hearty wish was expressed by all, that their enterprises may be crowned with complete success.

We learn that since this Festival one of the Messrs. Whitney has sailed for Australia to select and bring from thence the very finest flock of sheep that can be procured.

Artesian Well at Stockton.—This well for which so much interest is felt, and which some time since was checked by the choking, has been commenced anew; it has now a depth 740 feet; the water is soft, and seems affected by the strata of sand through which it passes. The water flows freely over the tube, but has no jet; the work is now progressing well, and will be continued with all earnestness and dispatch until the desired fountain is struck. As the well is situated near the City Hall, it will be a very desirable treasure to the city, if successful.

Gopher Trap.—W. Aldrich, of Oakland, called at our office a few days since with a new Gopher Trap, invented by him, which is completely successful in insnaring this enemy of our cultivators. The trap being inserted in the hole, which is easily done, the gopher cannot leave it without passing directly through the trap, which is certain to secure him. It is a simple, ingenuous and effective contrivance, and has been tried with complete success. We expect samples of the trap at our office for sale shortly, which will be announced. In this connection we desire to say that the plan we proposed in former numbers of the Farmer has been successful in many cases. In damp ground the moisture neutralizes the effect of the gas, and it does not work as well.

Brick Making.—Preparations have been made by the different brickmakers in our suburb, says the North Californian, at Oroville, to make about three hundred thousand bricks per month, or about two millions during the season, which is estimated to be about the amount that will be required in the town this year. This number will be sufficient for the construction of some twenty or twenty-five good buildings, several of which are already contracted. The number of brick used used last year in Oroville, was thirteen hundred thousand.

The State Fair.

We publish from the San Joaquin Republican the following, to show that an interest is being awakened for the coming State Fair. We are giving several days to the city of Stockton, and its vicinity, and are much pleased with the interest felt, and believe it will have great results. We shall give full reports next week, and hope to lay before our readers full plans of the Fair, with list of Premiums:

The State Fair and the Mining Interests.—It will be observed, by reference to the premium list adopted by the Executive Board, that premiums will be awarded at the next Annual Fair to several articles connected with the Mining interests of the country. This great branch of industry has been omitted hitherto, not from a want of appreciation of its claims, but from a lack of facilities for classifying the implements used in the several departments. The vast improvements effected in scientific mining during the last year, however, have enabled the Society to bring that interest within the scope of their operations, and to give it its due prominence among the industrial pursuits.

The mining implements, the improving and perfecting of which the Society propose to aid by awarding premiums, are the Mining Pump, the Riffle Box, the Quartz Amalgamator, and the Tunneling Machine—four principal agents in the production of gold. We desire to draw the special attention of practical and theoretical miners to these articles; not merely with the view of competing for the premiums to be awarded, but that the best talent of the country may be elicited in a common effort to produce the best possible machinery and implements for the common good. We know that the highest order of talent has been employed in the mechanical department of mining, the beneficial results of which are now confined to individuals, and which may be disseminated, through the instrumentality of the Society, throughout the whole country. We have no doubt that, before the annual meeting in 1858, the mining interest will be made a separate and co-ordinate branch of the great Industrial Organization, if the people in the mining districts will give the attention to the subject that its importance demands. What organization and concentrated effort has done for agriculture and manufactures, it will do for mining.

The Home of Science.

We love to meet those who study the laws of Nature, and whose hearts beat responsive to the melody that is breathed from her many voices—"Books in the running brooks, sermons in stones, and good in everything." About a year and a half since, we were in Stockton, and paid a visit to the Insane Asylum, then under the charge of Dr. Reid, as the Physician of the Institution. At that time we were much delighted with the fine Cabinet of the Doctor—a Cabinet rarely excelled—the larger portion of the animals being so exquisitely prepared by Dr. Reid himself. We also strolled over the grounds, and into a fine lot of ground a little distant from the Asylum, the private property of the Doctor, who then had only a few trees planted.

At our present visit we were surprised on visiting him, to find his lot converted into a beautiful garden, with a mansion almost embowered in roses. We found the Doctor and his lady pruning the vines and gathering the roses, and our visit revived pleasant hours: these renewed in the now enlarged Cabinet, and in cheerful converse with a social dinner, gave to our labors and duties while in Stockton those pleasant thoughts that we wish would never leave us. We were indebted to our friend for a pleasant ride on our round, also; and have been under many obligations to Dr. Reid, for valuable Meteorological tables forwarded us—we know our readers have also esteemed and appreciated them.

Married, Mated, Blessed—We are growing a little proud about our journal, in relation to one particular department, we mean the "Ladies department." There must be some fatality about it, for, we believe, every young lady that has honored us with her continued correspondence for a year, has found a husband; and it has been just so with the widows. The last of a happy trio band that was with us *one year ago*, has left the state of single blessedness, and been doubly blessed; and what is most gratifying is, that they are all so happily married. "Katie King" and "Jennie" entered into bonds to keep the peace, and now "Bessie" goes too, for we find upon our table a neat white card which reads thus: "Mr. and Mrs. Welty;" and we learn that on May-day, at high meridian, a happy pair were seen in Grace Church, Sacramento, a few words were said by the Pastor, a prayer made, a blessing given, a song, and two hearts were consecrated one, for D. W. Welty, Esq., a distinguished counsellor of that city, had sought and won the fair and highly gifted Mrs. E. A. Wright, long known as a devoted teacher, and the counsellor had made her his bride. The steamer of that day bore them on their wedding tour, and a thousand warm prayers followed, wishing them years of unalloyed happiness.

Agricultural Societies at the East.—By the late mails we have received from almost every State Society the Reports preparatory for the coming Fairs of 1857, with their lists of premiums. Many of the Societies issued their lists of premiums in March, some earlier, and all are on an extended scale from previous years. There seems to be a very large increase of interest in every department of Agriculture, and the State authorities and legislatures of several States are showing a laudable interest in these plans. This is as it should be. We hope California may yet imitate other States.

Rodeas—The annual Rodeas of Messrs. Thomes, Toombs, Chard and Ide are now going on. This yearly marking and branding is a sort of festival among the Mexicans, and the customs of making it such is still retained by our old California citizens. It affords a great amount of sport not wholly unattended with danger.—[Red Bluff Beacon.

THE CROPS.—There seems to be some diversity of opinion as to the coming crop. The Marysville Express says, that a gentleman who is a large dealer, indeed one of the largest in this portion of the State, assures us that all such fears are groundless. He says that there is half enough of the old crop now on hand to feed the people of the State, and besides, the quantity of ground sown is very much greater this year than it was last. He also assures us that the chief falling off in the crop is in Sutter, Colusi and Yolo, although we are aware that very considerable fields in this county, on the Feather river, will be short at least one-half. —[Oroville Californian.

RAIN AT RED BLUFFS.—Within the last week, says the Beacon of Wednesday, we have been favored with fine rains. It is a little late coming for the good of early crops, but will prove a great salvation to the late ones. While the rain was coming down, many of our neighboring farmers, being in town on Court business, expressed their joy by getting gentlemanly elevated. A fair average crop is now anticipated. There was some grass mown, which of course was injured, but farmers find no fault in view of the vast benefits received.

The Yreka Union of the 7th says: Our farmers are, no doubt, highly delighted with the showers of rain which have fallen occasionally during the last two or three days. A good rain would be a blessing to our farmers, and likewise a welcome friend to the miners. Great fears have been entertained, that the prevailing dry weather would seriously damage the crops and grass, but this timely rain, which still showers upon us as we go to press, will we trust, secure an abundance of both.

The vicinity of Santa Cruz was visited on Wednesday evening and Friday morning with slight showers of rain, and on Saturday the appearances indicated that more would fall.

The new road from Santa Cruz to Watsonville has been completed.

The rate of taxation in Santa Cruz county has been fixed at $1 on each $100 and $4 a head for road purposes.

AN EARLY MELON.—The editor of the Union Democrat (Sonora) has been shown a ripe cantaloupe melon, grown in that vicinity, and descants eloquently on the refreshing influence of such a sight so early in the season.

The high stage of water during the past winter has washed down a sand bar at the junction of the Yuba and Feather rivers, which already offers some slight impediment to their navigation.

The first Wire Suspension Bridge constructed in Siskiyou county has been completed at Virginia Bar, across Scott river, a short distance above its mouth.

RADISHES.—If any of your readers, who cannot raise good radishes, on account of worms, or suitable soil, will strew common wheat bran, one inch thick, on any good soil, and hoe it in, and then plant their seed, they may eat as good radishes as any body can grow.

DELAYED COPY.—Our correspondents and readers must be patient—we have much to say in continuation of our up river trip: Bidwell's, the Caves, Waterfalls, our trip to Suisun, Sonoma and various other places, and valuable statistics. We have manuscript from Alice, Addu, Agricola, Mordaunt, De Quincey, Ben Bolt, and our old and valued correspondent B.; these, with other interesting matter, will appear next week.

PHILHARMONIC SOCIETY OF OAKLAND.—By a courteous invitation from the Philharmonic Society of Oakland, the Editor of this paper will deliver an address before that association on Tuesday Evening next. Subject—"Beautify Home."

THE WHAT-CHEER HOUSE.—The advertisement of this most excellent house deserves a special notice always, for the good character it has secured by the care and attention bestowed upon its patrons, in order that they may truly feel at home. The best proof that Woodward's "What-cheer" is popular can be seen from the fact that although hundreds left that house on the sailing of the last steamer, it was as full as ever the same evening. Interested runners for other houses often tell strangers that "Woodward's is full," and they "can't come in," and thus try to drive away patrons of this popular house. We say to all, never heed such information; pay no regard to runners or bribed hack drivers, but go to Woodward's if you wish, he never turns his friends away.

The What-cheer House, though always filled,
Has still sufficient room,
For Woodward has a heart so willed
You will always find a home.

Woodward acts on the principle that "Uncle Sam is rich enough to give us all a farm," and so he has a hotel that is large enough to give us all a home.

PERSIAN SHERBET.—We have tried the sample sent us of this excellent and refreshing beverage, and have no hesitation in pronouncing it a superior article, indeed. Mr. Hegg introduced it into New York, and from thence he came to this country, as he was confident a climate like California would require a beverage of this kind. From the testimony received we are confident this Beverage is worthy a careful notice by all who love a cool and pleasing drink in warm weather. The ingredients being purely vegetable, it carries with it a recommendation that is reliable for purity and excellence.

HOLLOWAY'S OINTMENT.—Don't have Sore Heads or Sore Breasts; don't have Salt Rheum, or any skin disease. Use this valuable Ointment, and no limb need be amputated, unless the bone be destroyed.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

CITY TRADE REPORT—FRIDAY, MAY 15—12½ P. M.
[From the Evening Bulletin.]

Flour—Haxall, in bbls, $17; Domestic, in qr. sacks, $13 50; Oregon, in qr. sacks, $12 50; Napa City Mills, qr. sacks, $14; and Fowler's self-rising, at $16.

Wheat—A large parcel has been sold for Stockton, but we could not ascertain the price.

Barley—Sale of 700 bags private, and 100 do, at $2 20.

Potatoes—Sale of 293 bags, at 1⅞ a 2c.

NO. 3 ENGINE, STOCKTON.—We stepped into the new Engine House of Company No. 3, which company is composed of a fine band of Germans. Their engine, which is named the San Joaquin, is of beautiful model. There is a fine hose carriage attached, and their house and apparatus is kept in such order as to indicate an active and prompt company, and altogether is a credit to Stockton.

The old Georgia claim at Volcano, last week yielded a pound of gold a day.

SPECIAL NOTICES.

☞ SIX REASONS WHY EVERYBODY USES LYON'S KATHAIRON:

1st. It is the *cheapest* preparation for the hair ever made.
2d. It is pronounced by all to be the *most beneficial*.
3d. It is the most *agreeable* to use.
4th. It is the *cleanest* and most *carefully prepared*.
5th. It is the most *highly perfumed*.
7th. It is the only article that never fails to give *entire satisfaction*.

The immense sale of the Kathairon—nearly 1,000,000 bottles per year—attest its excellence and universal popularity. Sold by all dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers, San Francisco. 16-1m

☞ BEAUTIFUL GIFT.—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

☞ JOSEPH GILLOTT'S STEEL PENS.—These popular Pens are to be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Thirty years' experience in the manufacture will, it is hoped, be a sufficient guarantee that every effort will be made to maintain the reputation of these articles. Those of *Standard Quality*, only, are allowed to issue from the Manufactory.

Each box contains a warrant, bearing a *fac simile* of Joseph Gillott's signature.

Manufacturer's Warehouse,
91 John street, New York.
HENRY OWEN, Agent. v7-15 3m

☞ WISTAR'S BALSAM OF WILD CHERRY,
The great remedy for CONSUMPTION and all other diseases of the Pulmonary Organs.

The greater the value of any discovery the higher it is held in the esteem of the public, and so much in proportion is that public liable to be imposed upon by the spurious imitations of ignorant, designing and dishonest men.

Now that this preparation is well known to be a more certain cure for incipient CONSUMPTION, ASTHMA, LIVER COMPLAINT, COUGHS, BRONCHITIS, and all similar affections, than any other remedy known, there are found those so villainously wicked as to concoct a spurious, and perhaps a poisonous mixture, and try to palm it off as the genuine Balsam.

This is to caution dealers and the public generally, against purchasing any other than that bearing the written signature of I. BUTTS *on the outside wrapper.*

Prepared only by Seth W. Fowle & Co., Boston, Mass., to whom all orders should be addressed, and for sale by their agents.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 15-1m

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

☞ READ—Copies of the Farmer for Mailing. That all may have an opportunity of sending the FARMER to their friends in the East, so as to make known the resources of California, we have

Reduced the price to Twelve and a-half Cents per Copy.

It will hereafter be found at the following places:

J. W. SULLIVAN, ULLMAN & Co., HUTCHINGS & ROSENFIELD, Montgomery street. } Post Office Arcade.

At these places can also be found copies of the State Society's Reports. Price 50 cents.

The FARMER will also be had ready for mailing at all times at the office, at $1 50 per dozen; also single copies.

WARREN & CO., Editors and Proprietors.

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

☞ TO STOCK RAISERS.—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

ASSURANCE.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!

The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance* is *practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.

The principle on which *all* Insurance is based, is that whatever has occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.

When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of Insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible the future interests of those with whom he has linked himself,—the highest *morale* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakspeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha'an ha' done for oursel's, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is *true* charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his habitual economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are in *health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered unassurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.

Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.

Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.

The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone association—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom *then* will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.

To bring the duty home, we may refer to the City Sexton's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,316 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. This speaks a warning voice—do thou, our reader, heed it!

We close this appeal, leaving it upon the consciences of all to whom it may come.

NORTHERN ASSURANCE COMPANY,
For Fire and Life Assurance at Home and Abroad.
Established in 1836—Incorporated by Act of Parliament.

Are furnished, including the transit of the Isthmus.

Passengers are notified that the tickets for the steamers of the U. S. Mail Steamship Company must be presented to their Agent at Aspinwall for registry and exchange, as they will not otherwise be available.

☞ Treasure for shipment will be received on board the steamer until 12 o'clock midnight, Tuesday, May 19th.

No Merchandise freight will be received on board after 3 P.M., May 19th, and a written order must be procured at the Company's Office for its shipment.

For freight or passage, apply to
FORBES & BABCOCK, Agents,
Corner of Sacramento and Leidesdorff streets.

☞ A Choice of Berths on the Atlantic Steamers is secured by the early purchase of Tickets in San Francisco. v7-1

Ho! There, Everybody! Face the Music and Read!

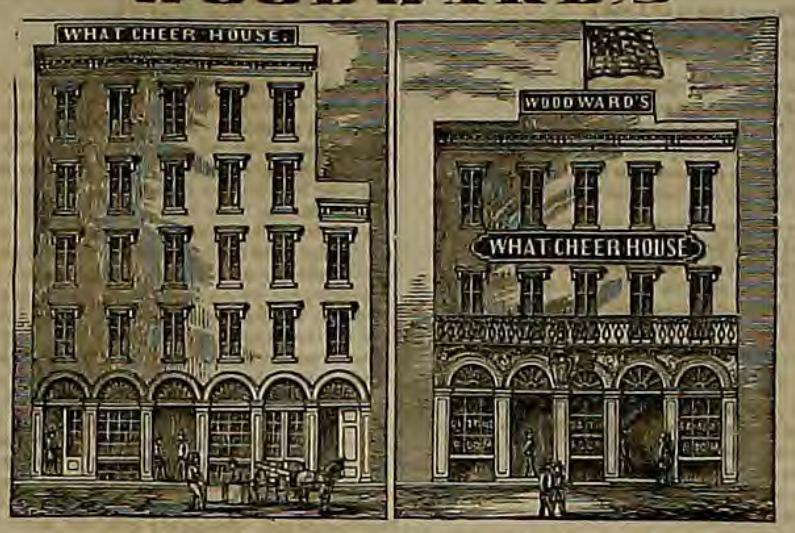
If you have business of any kind to transact, is it not important that you should endeavor to get as near as possible to where business of all kinds is known to center?

Do you wish to patronize a house conducted on strictly temperance principles?

Do you want to stop at an establishment favorably known throughout California, Oregon, and all other places, for its moderate charges, good tables and best of beds, together with order, comfort, convenience, and superior accommodations?

If you desire all these, we advise you to go to

WOODWARD'S



87, 89 and 91 Leidesdorff street---119 and 121 Sacramento street.

This establishment is centrally located in the principal business part of the city, and in the immediate vicinity of the Steamship Company's Office, the Express Companies Offices, and the United States Branch Mint.

BOARD, per Week, $6. BOARD, per Day, $1. MEALS, 50 cts. LODGINGS, 50 to 75 cts. per Night.

☞ Single Rooms, furnished complete, 75 cents per Night.

☞ Rooms or Lodgings can be had by the Night or Week, with or without board, to suit the convenience of all.

The Beds are fitted up in the very best style, with patent French springs, and the best of curled hair mattresses, clean bedding, &c.

☞ BATHS FREE! ☜

By unremitting attention and untiring efforts to furnish the greatest amount of comfort and convenience at extremely low prices, the proprietor hopes to merit a continuance of the increasing patronage that the What Cheer House at present enjoys.

For the accommodation of miners and others having money or valuables, there are two large safes in the office. There is an extensive Library and Reading Room, well supplied with papers, periodicals, &c.

THE HOUSE IS OPEN ALL NIGHT.

☞ Travelers will please to remember that there are no "Runners" connected with this establishment. The What Cheer House is conducted on strictly temperance principles.

DRUGS, MEDICINES,
Paints, Oils, Perfumery, Brushes, &c.,
No. 260 J Street
(OPPOSITE THE PUBLIC SQUARE),
v7-4 3m SACRAMENTO.

Hayward's Hotel,
Five Miles from San Leandro, near the Castro Ranch.

THE Proprietor of the above Hotel takes pleasure in calling the attention of his patrons to his house at the present time. Having taken some pains to newly finish and furnish his house and prepare it for the traveling public, he feels confident he can offer a pleasant and comfortable "home" for the traveler, or for any one that wishes to spend the summer season in one of the finest valleys of the State.

The location is one of the most healthy and delightful spots in Alameda county. Situated upon a commanding eminence, it presents a magnificent view of one of the most beautiful and highly cultivated valleys of California, and opens the prospect to the bay and harbor of San Francisco, and the country around for many leagues.

The Proprietor has spared no pains or expense to fit and furnish his rooms in a style having reference to neatness and cleanliness and comfort. These he feels confident will be approved; and every effort will be made to have the table and and every other department subserve the pleasure of his patrons.

A good Stable is attached to the house. Horses in saddle or harness can be furnished for the pleasantest road scenes in the country—the Springs, the Mission Gardens, the Fishing Grounds, and other places, furnishing abundant sources of amusement for the benefit of invalids or persons desiring recreation and pleasure.

☞ The patronage of the public is solicited. v7-16 3m

Miscellany.

THE CROP OF ACORNS.

THERE came a man, in days of old,
To hire a piece of land for gold,
And urged his suit in accents, meek:—
"One crop alone is all I seek;
That harvest o'er, my claim I yield,
And to its lord resign the field."

The owner some misgivings felt,
And coldly with the stranger dealt;
But found his last objection fail,
And honeyed eloquence prevail;
So took the proffered price in hand,
And for one crop leased out the land.

The wily tenant sneered with pride,
And sowed the spot with acorns wide.
At first like tiny shoots they grew,
And broad and wide their branches threw;
But long before these oaks sublime,
Had fallen by the scythe of time,
The cheated landlord mouldering lay,
Forgotten with its kindred clay.

O! ye whose years unfolding fair,
Are fresh with youth and free from care,
Should vice or indolence desire
The garden of your soul to hire,
No parley hold—reject the suit,
Nor let one seed the soil pollute.

My child! their first approach beware;
With firmness break the insidious snare.
Lest, as the acorns grow and strove
Into a sun-excluding grove,
Thy sins, a dark o'ershadowing tree,
Shut out the light of heaven from thee.

God is Love.

THE following beautiful sketch we find in the New York Dispatch, and there is so much beauty and truth in it that we take pleasure in printing it:

If there is a root, can you stay branch, foliage, bloom, even fruit, except by violence; leave it to Nature, as God left it, and there will be the growth—wholesome, right.

It seeks its place—life bursts forth—it seeks air, sun; that it may bloom and bear.

You have a soul; God planted it—an offshoot, a root, from himself. "God is Love"—if it is wholesome, right, it shall burst forth, expand, bloom; (twine in some instances); climb, grow. Who will hinder?—who will not aid?—who sneer?—who condemn? Let him answer it to God, who chooses to behold its expanding life; the more vigor, the broader foliage, the richer fruit, the more honor to God! Cast out love from the soul, and every day's observation and experience shows your life is cast out. All movings are spasmodic mimicry of life—filagree foliage on a manufactured stem, fluttering in little breath breezes—artificial all, and metal exchanges—pendulum-tickings and wheel-movings.

Let this root be neglected, and it will die; cared for and cultivated, a cedar of Lebanon has not more sure hold and growth. Let it be trodden by a witless foot, while you yourself will not be traitor, and it shall sprout from another point—its Maker be praised, it shall not die, unless your own hand destroy. Over this you shall have power; you may hold it in being: Heaven will help you if you will help yourself.

Who would be isolated, cold, unloving? Who would not wish for love, pray for it? Do you thirst? you say give me drink or I die! So with the higher, a loving soul wants love. Are you without such a want?—you are against Nature and God. "God is love"—God commands, enjoins love—will you be like him? Not that He needs it—He is Infinite; we want and need it. If we want and appreciate it, then love grows—spreads into a forest, of freshest, sweetest verdure; or, as a Banian tree, up and down, root and branch, earth and sky—holding fast at every point of life.

How can one call it selfishness to want love or its expression? In one of the new books of the season I read: "Did one eager, selfish eye long to behold a tear?" (the reflection of one who is viewing the departure of a steamer, with friends on board, and friends on shore). If an eager eye did not long to behold a tear, or an equivalent (?) expression; then it was an eye miserably cold, and worse than selfish—it was willing to look upon beings too selfish to love—lest mayhap it may bring them a tear. Ah, such an eager eye cannot be selfish—it is not selfishness—it is but another spreading branch of the Banian, bringing refreshing shade, and songs of birds.

Selfish love is a baser thing than this. "God is Love." He makes no selfishness. One who really craves love (none others can love) is the most unselfish of all being. What sacrifice is too great, for one who honestly loves. God only knows how often and truly, the entire self is sacrificed, in its behalf—it will continue to be—for love shall live, it is of the Infinite—one may carp and sneer, it shall live.

Your lungs no more need air, than your soul if true needs love; if a "loving soul," in which the "breath of life" was breathed, it would give and take—it may be forced to weep in darkness (love absent, it is dark) alone, all alone, but unless you deliberately cast it out, it will live on.

Will this please God, who is love, when one says, "Oh root, tree; oh oak, laurel; thou art selfish and vain, thrusting out branches to the sun and air?"

Is there in the universe a root, and no place for nourishing, growth? It cannot be—there is a place.

Does a nature's want make one a legal beggar! or, is it not beggary? Is it not more honor, the more the God-implanted what is realized? Is it I—is it selfishness—made in God's image, who is love? Shall I please him if not loving? Shall I do violence to my natural image, and hate? (one might feel it better to hate, than be a block, or a tinseled image).

A woman whose eyes are opened, instructed by a genuine love of great, glorious Nature, cannot love what is mean and low, in humanity—morally low.

Coming upon the high, the noble, such an one must love—it is an emanation from the heavenly principle within—it proves that life, not death, is there.

"The beautiful" may not be precisely the same to all; but the beautiful will always be "the good," and both will be "the true," and truth be good and beautiful; and so they perfectly link, and mingle, and circle, and a healthy pure soul, has all. Is not love good? Is not love beautiful? Is not love true?

Here is proof. Such a soul seeing good, loves; seeing the beautiful, loves; beholding truth, loves. Then love is over all—absolute—"God is love." Whoso will not agree to love this trinity is at variance—discord with God himself. Will you love? Will you be hungry? Can you stay your spiritual from love, any more than your physical from hunger, if both are healthful?

Then cherish it—love God—love Nature—love the good, the beautiful, the true; every where then you will live it, you will have it—your's, you are love—God is love.

Lessons for the Little Folks.

IN the southern part of Europe, there is a beautiful country named Italy. There the poor are called peasants. Bees and garden fruits and silk-worms make all their wealth. The first thing I remember is, that I was lying one spring morning in a window that looked out pleasantly on the seaside. The little closet in which I was, was shelved all around—a number of beautiful butterflies were floating about in the sunlight and on the shelves were crowds of disagreeable looking little gray worms that were all eating greedily. A pretty maiden came in presently who brushed out all the litter and laid fresh leaves on the shelves for the little worms to eat. She laid a fresh branch beside me on which there was a large dew-drop. In it I saw myself as in a looking-glass, and was dreadfully shocked to find I was a little dirty gray worm, like those around me with which I was so disgusted. While I lay moaning in my heart over this discovery, a good mother moth came sailing down and settled herself beside me. Seeing my grief she said: What ails you, poor little worm? I told her I did not wish to be a little gray worm; I wish to be a pretty maid, I said, or a gay butterfly. She answered: Wings are never given until work is done; the little maid is but a mortal worm; if she works rightly, she will have wings given when her work is done. These gay butterflies were all worms, and got their wings when their work was done. You shall have wings when your work is done. The mother moth finished her work and sunk to rest. The little maid came and pushed her out of the window as useless litter. But the words and works of the good do not perish with them. She had wrought a robe that a king was proud to wear, and her words have moved me to work diligently, that my robe may rival hers, and I know that I shall have my wings when my work is done. Little children, learn from the silk-worm's story, that wings are never given until work is done. Knowledge and wealth are wings which will carry us to the places and things we want in this world. They are not given until work is done. Faith and the favor of God are the wings which bear us to Heaven, but they are never given until the works of repentance and obedience are done.—[Valley Farmer.

RULING PASSION OF THE ARABS.—I was riding home from the ruins one evening with Mr. Longworth. The Arabs returning from their day's work were following a flock of sheep belonging to the people of the village, shouting their war-cry, flourishing their swords, and indulging in the most extravagant gesticulations. My friend, less acquainted with the excitable temperament of the children of the desert than myself, was somewhat amazed at these violent proceedings, and desired to learn their cause. I asked one of the most active of the party. "O Bey!" they exclaimed, almost all together, "God be praised, we have eaten butter and wheaten bread under your shadow, and are content; but an Arab is an Arab. It is not for a man to carry about dirt in baskets, and to use a spade all his life; he should be with his sword and his mare in the desert. We are sad as we think of the days when we plundered the Aneyza, and we must have excitement, or our hearts would break. Let us, then, believe that these are the sheep we have taken from the enemy, and that we are driving them to our tents." And off they ran, raising their wild cry, and flourishing their swords, to the no small alarm of the shepherd, who, seeing his sheep scamping in all directions, did not seem inclined to enter into the joke.—[Layard's Nineveh.

LEFT-HANDED COMPLIMENTS.—Curran used to relate with great glee a mishap which befell a Roman Catholic bishop who went up to Dublin Castle to adulate the Lord-lieutenant. It seems one of Lord Cornwallis' eyes was smaller than the other, and had acquired a quick, perpetual, oscillating motion. The addressers, who had never seen him, had elaborated their compliments on the country. His excellency was on the throne in high state, when Bishop Lanigan, of Kilkenny, at the head of his clergy, auspiciously commenced—"Your excellency has always kept a steady eye upon the interests of England"—the room was in a roar. "Never," said Curran, "did I hear its match, except in the mayor of Coventry's compliments to Queen Elizabeth—'when the Spanish Armada attacked your majesty, they caught the wrong sow by the ear.'"

UNEXPECTED TESTIMONY.—It is a well-known fact in the experience of all legal advocates that there is generally a point in the examination of a witness beyond which it is dangerous to proceed. The truth of the remark was lately proved in the Huddersfield Guildhall. A solicitor had undertaken the unusual charge of defending a "drunken and disorderly" case, when pressing the policeman somewhat hard, the official stated that he remembered the time of the alleged charge, "because he was taking a very respectable gentleman home in a state of intoxication." The policeman's memory still being further goaded, he added—"Why, the very respectable man I was taking home was you yourself!"—[Leeds (Eng.) Mercury.

ELEPHANT HUNING IN CEYLON.—Although the number of elephants is still so immense in Ceylon, they must, nevertheless, have been much reduced within the last twenty years. In those days the country was overrun with them, and some idea of their numbers may be gathered from the fact, that three first-rate shots, in three days, *bagged* one hundred and four elephants. This was told to me by one of the parties concerned, and it throws our modern shooting into the shade. In those days, however, the elephants were comparatively undisturbed, and they were accordingly more easy to approach.—[Baker's Eight Years in Ceylon.

AN INDIGNANT MOTHER.—Recently at a church in Southwark, England, there was a "christening." After the ceremony, and while the minister was making out the certificate, he happened to say—"Let me see: this is the 30th?" "Thirtieth!" exclaimed the indignant mother; "indeed it is only the *eleventh!*" Of course the minister was alluding to the day of the month.

CULTIVATE not only the corn fields of your mind, but the pleasure-grounds also.

THREE things of short continuation—a lady's love, a chip fire, and a brook's flood.

BOOKS, &c.

Very Valuable and Important!

VAUX'S ARCHITECTURE.

VILLAS AND RESIDENCES: A Series of Designs Prepared for Execution in the United States. By Calvert Vaux, Architect (late Downing & Vaux), Newburgh on the Hudson. Illustrated by 300 engravings 8vo, muslin. Price $2.

This copiously illustrated work has been prepared with the intention of giving a hearty practical response to the ever-increasing popular desire for improvement in American rural architecture, and it deals with the whole subject in a simple, comprehensive style free from all professional technicalities. As it is very fully illustrated, it affords a storehouse of practical suggestions to all who are interested in the building of country houses in America; and as the architectural designs of which it is composed have been for the most part prepared in detail for actual execution, this work has the all-important advantage of being the result of *bona fide* experience both on the part of employers and architect. It also contains a much-needed chapter, in which the special features of interest that occur in building country houses are touched on and drawn in detail, and a valuable amount of information on these points is thus introduced in a condensed, intelligible manner.

To avoid any confusion of ideas in examining the book, the various illustrations are so arranged that the whole scope of each design may be comprehended at a glance; and the vignettes that are appended to the designs have afforded opportunities for treating in an artistic manner many interesting accessories that have hitherto scarcely attracted the attention they deserve.

To a great number of persons this volume will have an additional interest, as it contains several designs that were prepared while the author was in partnership with the late A. J. Downing, whose well-known works have had such a beneficial influence on rural taste in the United States.

Downing's Rural Essays.

Edited with a Memoir of the Author, by George William Curtis, and a Letter to his Friends, by Frederica Bremer. In One Volume Octavo.

Of Mr. Downing's reputation as a writer, it is almost superfluous to speak. He is, by universal consent, the best and most interesting among those who have chosen the same line. This volume contains all the editorial papers in the HORTICULTURIST. The memoir will be read with great interest, on account of the amiable and excellent character of Mr Downing, as well as his well-earned literary fame. Miss Bremer's testimonial to his merit is an eulogium equally worthy of him and of herself. The volume closes with a series of interesting letters from England.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the BEST Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentleman are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to

Estudillo House,
SAN LEANDRO, Alameda County.

THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.

To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.

San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.

The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 98 ARCH STREET, Philadelphia, Pa.

For sale by all Druggists in California and elsewhere.

v7-6 3m PETER DONAHUE.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

April 1, 1857. B. F. FISH, Agent.

v7-13

News by the Steamer.

THE mail steamer John L. Stephens arrived at the wharf, this afternoon, at 5 o'clock. The following is her memoranda:

The P. M. S. S. Co.'s steamer J. L. Stephens, R. H. Pearson, Esq., Commander, sailed from Panama, May 2d, at 6.25, A. M., with the U. S. Mails, 920 passengers, and 613 packages merchandise. The railroad being in excellent order our passengers crossed the Isthmus in three hours, and were safely landed on board this steamer by the Company's steamer Taboga.

The Stephens brings but little news of importance, save the news of the overthrow of Gen. Walker's Army. This, if true, seals the fate of the Nicaragua invasion, and will be an example for all future filibustering expeditions. Most calamitous has it been for some families, whose hearts have bled; but the Costa Ricans, and even the unchristianized, have suffered severely, and their families been destroyed. The whole expedition has been one of cruel suffering and disastrous in its results.

The news announces that the great Relief Expedition of Col. Lockridge, for Gen. Walker, failed in its purpose, and retreated from the battle field. The steamer J. N. Scott, having a portion of the army on board, burst her boiler on the San Juan river, whereby the following were killed and wounded:

Killed—Maj. W. Morris, Captains Slate and Conklin, Lt. N. N. Beidleman, J. Buffington, C. York, J. L. Fewell, Joe Murray, W. Edmondson, C. S. Thomas, J. Wilson, R. Higgins.

Wounded—Col. F. Anderson, Lt.-Col. Doubleday, Caiptains M. French and Barrington, Lts. J. A. Sistere and Mulholland, C. Kennedy, N. Crawford, A. Bailey, E. Baker, J. Rooney, and eighteen others slightly injured.

Arrangements were making to send back to the United States the troops, and we may soon expect to hear of the final close of this long and lamentable waste of human energy and human life.

Very little other news, except the usual gales, storms, fires, embezzlements, frauds and robberies—fully equal to any on the Pacific Coast.

CALIFORNIA APPOINTMENTS.—Hon. J. Denver has been appointed Commissioner of Indian Affairs. Vincent E. Geiger has received the appointment of Indian Agent. C. H. Hempstead was appointed Superintendent of the Mint. Major Roman has received the position of Appraiser—and Mr. Jesse Elder the Postmastership of the city of Sacramento.

H. Noble of Minnesota, John Kirk of California, and Wm. Magraw of Missouri, have been appointed Commissioners to superintend the construction of the Wagonroads to California.

THE TEHUANTEPEC ROAD.—A special dispatch from New Orleans, dated the 16th, says official advices have been received here to the effect that the Mexican government has admitted that the contractors to open the Tehuantepec Road have complied with the terms of the original contract, and that the official authorities have received the road.

The Massacre of Crabb's Party.

THE news of the overthrow of this party has spread a gloom over portions of our State that it will take long years to remove, and while we deplore the loss of human life and the fall of many noble and generous men we cannot but still further deplore the error that led men to assume a power and authority which caused them to be viewed as invaders and outlaws, and has thus brought them to a terrible end. We quote from the Sacramento Union the following correct commentary on this sad affair:

"While lamenting their untimely end, we cannot close our eyes to the fact that they fell in a cause which was not sanctioned by lawful war. They marched into a country with which the United States are at peace, with arms in their hands; their advance was resisted, a fight followed, in which the Americans were overpowered, captured and shot. The authorities treated them like a band of robbers, as, according to the law of nations, they had a strict legal right to do. But in so acting they trampled under foot every law and principle of civilization and humanity."

This massacre, is stated to have occurred at Cavorca, distant about thirty-five miles from the Gulf of California, at the mouth of the San Ignacio, one hundred and forty from Hermosillo, and two hundred and ten from Guaymas.

The following is the list of Captain McKinney's Company:

H. A. Crabb, San Joaquin;	S. Bunker, Tuolumne;

WAGON ROAD MOVEMENT IN MARYSVILLE.—On Wednesday evening, May 13th, at a meeting in Marysville, John C. Fall, Thomas J. Taylor and F. L. Aud, Esqs., were appointed a committee to collect funds to defray the expenses of survey of the proposed road from Honey Lake Valley to the American Valley, and to disburse the same.

VERDICT AGAINST PALMER, COOK & CO. The Sacramento Union says that a verdict of $72957 50 was found against Palmer, Cook & Co., in the District Court, on Thursday, on account of non-payment of last July's interest on State indebtedness.

USE THE OXYGENATED BITTERS, and you will have no cause to complain of lassitude, debility, or any of those complaints inseparable from our Spring weather. They are regularly prescribed by some of our most eminent physicians, in cases of Indigestion and General Debility.

BOOKS, &c.

The Fruit Garden.

By P. BARRY,

Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo, cloth. Tenth Thousand

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, THE VILLA, THE MANSION AND COTTAGE. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

☞ Samples of the above Books can always be seen at the Office of CALIFORNIA FARMER, where Catalogues will also be found. v7-6

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

PHILLIPS, SAMPSON & CO., Boston, Mass.
H. H. BANCROFT & CO.,
v7-6 3m San Francisco, Cal.

American Poulterer's Companion.

A PRACTICAL TREATISE ON THE Breeding, Rearing and General Management of various Species of Domestic Poultry. Illustrated with Portraits of Fowls, mostly taken from Life; Poultry-House, Coops, Nests, Feeding-Hoppers, &c., &c., &c. A new edition, enlarged and improved. By C. N. Bement. With 120 Illustrations on Wood and Stone. Square 8vo., Muslin, $1 25.

This is just the thing. Here is the whole feathered tribe—geese and ducks, hens and turkeys, without number. Besides the manifest utility of such a book to farmers generally, it will be the special delight of hundreds of juvenile readers, whose first attempt in the care of stock on a farm is the overnight of a poultry-yard. Even now we see their eager eyes glistening over these pages. But the book has great merit and value not only for young folks, but for all who live in the country, and who have occasion to attend to this most useful branch of domestic economy.—[N. Y. Evangelist.

We have not yet become acquainted with a more complete treatise on the subject. No labor nor expense has been spared to render it the best work of the kind ever published, and such we consider it.—[News.

If our country friends get this book, we have no doubt that their poultry-yards would be improved.—[Richmond Presby.

No farmer should be without it.—[Spectator.

Eminently practical. All who are in any way interested in the rearing of poultry will be delighted with the great amount of useful information presented in this book.—[Com. Adver.

The lithographs of splendid specimens of stock are really superb, and render the volume ornamental as a gift-book.—[N. Y. Sun.

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

New Cultivator.

THE undersigned would invite the attention of Farmers and Cultivators to his New Gang Cultivator. The object of this invention is, that while it breaks up the earth deep as any "deep tiller plow," it pulverizes the earth finely, and in some measure operates as a subsoiler. This new cultivator will answer in the place of a plow for preparing land for grain. It is most admirable for breaking grain land, where only voluntary crops are expected; and for nurserymen and orchardists who wish finely cultivated soil it has no equal.

Persons who have used it have given testimonials of its value, and accounts of the experiments made with it can be given. It is very strongly made, and is capable of moving the earth twelve or fourteen inches deep.

All persons are invited to call at the workshop and examine it.

R. BEECHING, Manufacturer,
v7 5 3m 85 Pine street, San Francisco.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

Orders per Mail or Express promptly executed.

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.

3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.

4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the FARMER to any part of the State is only 6½ *cents per quarter, or 26 cents* per year. This is the lawful postage established by Congress and when more is exacted it is a violation of law

SEEDS, &c.

DIOSCOREA BATATAS, New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

SEEDS.

HOVEY & CO.,
DEALERS IN SEEDS,
No. 7 Merchant's Row, Boston, Mass,

ARE now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable Seeds are requested to forward their orders early.

Seeds packed securely for California or any other part of the country.

Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.

Catalogues sent gratis on application.

☞ Remittances must accompany orders. v6-19

New Flower Seeds.

A superior lot of very choice Flower Seeds—many rare kinds—just received from a Boston house. Persons wishing any of them can procure them by calling at our Office, 130 Washington street, San Francisco; or address by letter marked "Seed Order," and it will be promptly attended to. [7-11] WARREN & CO.,

Sugar Beet Seed.

WE have received a lot of very superior French Sugar Beet Seed. It is of extra quality, new and fresh, and imported expressly for trials of beet raising for sugar making.

Persons who desire a superior article can order by express, and the seed will be carefully forwarded. Such orders should be addressed to our office at San Francisco, superscribed "Seed Order." [v7-11] WARREN & CO.

Seed of the Great Tree.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the CALIFORNIA FARMER. v5-13

Smith's Pomological Gardens AND NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of *Trees, &c., have falsely represented themselves as our agents, offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

[PREMIUM MANUFACTORY.]

Hudson's Golden California Mustard.

THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

22 Front street, corner of Pine,
H. C. HUDSON.

MISCELLANEOUS.

PERSIAN SHERBET,

An Effervescing Temperance Beverage.

The most Wholesome, Refreshing and Invigorating Drink in the World!

THE powder from which this is prepared is made entirely from vegetable ingredients collected from all parts of the world, and combined together with great skill and care. Two tea-spoonsful put into a dry tumbler of large size, with a sufficient quantity of water added, produces immediately a cooling draught of charming excellence and flavor, and health-giving effect; it is adapted to all seasons and every one's use, and is especially suited for those who go to sea, as a preventive of sickness, costiveness, and the generally unpleasant state of the system arising from change of climate and living. It also lessens the dangers of incurring diseases under a tropical sun, and all who are about to take a trip to the Eastern States, if they regard health, ease and comfort on the way, should not fail to obtain a supply before starting, and more so, if ladies or children are with them; or invalids or the sick, as nothing is as grateful to the palate and stomach as this, and resists the enervating effects of hot countries so well; and, unlike ardent spirits, it does not enfeeble by inflaming, but strengthens and exhilarates both body and mind by its nutritious powers and the energy which it imparts to the digestive process: so, too, should seamen be provided with some before they leave the port—

"Those gallant men and glorious sons of toil,
Who brave the dangerous deep to guard their native soil,
And with daring hands the white wings of Commerce spread,
To bless the world and to earn their bread."

A glass taken at any time of the day removes all feelings of heat, thirst or even hunger; and its being made in a great measure of vegetable acids tends, to prevent Scurvy and purifies the blood at the same time. It is also an invaluable Restorative for those who labor hard for a living, such as Farmers, Miners, Mechanics and Laborers, and to Storekeepers, Professional men and others, whose occupations compel them to lead sedentary lives, a draught before breakfast gives new spirit for the business of the day; and last, though not least, it is a boon to Woman, who is—

"The sweetest or sourest source of all our joy and woe,
That this world can give or life must know,
To those who are mothers, sisters, daughters, wives,
And would have pleasant homes and happy lives,
Should Sherbet keep,—the best thing made yet—
For with no widow's tears or orphan's cries is ever wet."

At home, in the house, for husbands, fathers, sons, brothers, beaux to use, and their own dear selves and darling little ones as well—medical men who know its composition speak in the highest terms of its utility, and all the poet's praise. Byron calls it the blest Sherbet, Moore make frequent mention of it, and Hafiz the great Persian bard says:

"Boy, let you sparkling Sherbet flow,
And bid thy pensive heart be glad."

PREPARED BY
AUGUSTUS HOGG,
LONDON, NEW YORK AND SAN FRANCISCO.

Depot at the Davis Street Drug Store, near Jackson, San Francisco; and for sale by all respectable druggists and dealers, at 50 cents per Bottle—each one will make 12 glasses.

☞ Orders, accompanied by funds, can be forwarded by Wells, Fargo & Co.'s Express.

N. B.—Agents wanted and supplied on the most liberal and convenient terms. v7-17

SANDS' SARSAPARILLA,

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1858.

MESSRS. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 2d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,
CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; R. H. MCDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eyeball evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

MESSRS. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,
G. R. WILLIAMS, 262 BROADWAY.

Agricultural Reviews and Essays---No. 12.

The Book of Nature.

"POPULATION. With an Appendix on the Balance of the Food and Numbers of Animated Nature. By T. Sadler, Esq., M. P." (London.)

"GOLDSMITH'S Animated Nature." (Blackie & Son, New York.)

(ARTICLE 1ST.)

THE ultimate result of the theory of the Rev'd Mr. Malthus is not likely to occur for a long time to come. Our terrestrial planet is so abundant in agricultural resources, and "the creature we call man" so ingenious in improving upon Old Dame Nature, or rather in devising means whereby that venerable lady is made to improve herself with a little assistance, that "enough and to spare" is destined to be her provision for us, for any conceivable number of ages. But when we descend lower in the scale of animal creation, we would naturally be led to draw very different conclusions, if an ingenious plan had not been devised by the great Creator, whereby the machinery which he has constructed, and so systematically arranged, has also been furnished with a self-regulating process, by means of which the whole may go on like clock work *ad infinitum*.

Who says that death among the lower animals was the result of Man's transgression? Not the geologist, who fresh from his researches among the mountains brings to his museum the remains of animals imbedded in the rocks, long before "Adam carded or Eve did spin," or the wily serpent twisted its little form with treacherous intent among the branches of "the tree of knowledge of good and evil," tempting the first and finest specimen of female frailty to sin. Not the natural theologist of modern times, who, taking a liberal and extensive view of the provisions of a benevolent Deity, perceives in the great destroyer, not only the friend of decrepit age and enfeebled humanity, but the means by which each humble creature which "lives and moves and has its being," after enjoying for a time the pleasures of existence, may quit the stage, and allow more youthful and energetic performers to act their part in the great drama, which is being played in this glorious World. I envy not religionists their fancied orthodoxy, if it leads to any supposition so contradictory to science and common sense.

But what hast thou, O Philosophy! to give in exchange for what thou proposest to deprive us of? Would'st thou rob us of the conclusions of pious men, and christian commentators, and leave us to struggle on in this vale of tears, without one ray of heavenly light that may be reliably depended on, to guide us in our benighted condition, and "intimate eternity to man?" Would'st thou sap the foundations of revealed religion, and topple the ruins about our ears, and erect no temple in its place in which the humble and contrite may offer up prayer and praise to the Great Creator of us all? True Philosophy proposes to perpetuate no such iniquity. The Volume of Inspiration when properly interpreted is a reflex of the Book of Nature. Its first sentence tells us that "in the beginning God created the Heaven and the Earth." And dost thou suppose, O vain and conceited mortal! that he who created the great Universe, who "made man in his own image, and breathed into his nostrils the breath of life," has given to him no natural powers by which he can read the unmistakable characters which HE has impressed on the creatures of his hands, as clearly and distinctly at those with which, "on the secret top of Horeb," with his own unerring finger he traced out the principles of morality for his servant Moses? or learn his punishment as correctly, if the lessons which Nature imparts are disregarded, as when to the astounded gaze of the monarch of Babylon, in the midst of his wanton carousals, the fingers of no earthly hand traced his doom on the wall?

Aristotle tells us that as a book shows the ideas of its author, so does Creation reveal to us the ideas of the Divine Mind. It is a glorious comparison, and one to which no one can refuse to say Amen. Thus we have, besides the Book of Life, another Book equally divine—the great Book of Nature—from which we may learn more of the ideas of Deity, and the means by which he has been pleased to resort to accomplish his ends, than those silly mortals who are merely content to look at its binding, and the outside ornaments with which it is garnished, are apt to suppose. Many thanks to Dr. Paley, who for our sakes, following the knife of the dissector, has so strikingly exhibited the structure of our "earthly tabernacle," and explained with what ingenuity and skill it has been contrived. Now, he shows us how the framework of bones has been put together, how the ball and-socket joint has been used in one place, and in another, the mortice-and-tenon, and why—now, how the food is dissolved in the stomach, and how it is rendered suitable to mingle with the blood; how the blood, impelled by that force-pump the heart, is sent on its errand of supply for unavoidable expenditure along the arteries; and how the veins bring it back with unfailing duty, to be churned and purified in the lungs, before it is again sent out on the same errand as before. And if he did not explain, how by chemical means it is made to furnish the elements of heat and nutrition, it was because science had not in his day made those discoveries which Liebig has so clearly expounded. With what feelings of respect for each new and ingenious instance of minute mechanical skill, on the part of the great Contriver, do we rise from the perusal of Paley's wondrous production! and not only bless the wise Creator, by whom we have been so "fearfully and wonderfully made," for our perfect construction, but also for enabling a sinful mortal like ourselves to explain his benevolent intentions so clearly, and so completely to satisfy the soul that is hungering after heavenly manna, with food so fitting for enabling us to meet the puny assaults of ribald skepticism! Many thanks to the authors of the Bridgewater Treatises, who, taking up the theme where he had left it, have added whatever modern science has discovered to our former store of Natural Theology.

But there is another department of this most religiously interesting and important study, which Mr. Sadler has investigated and explained, so carefully, so completely, and so beautifully, that none will begrudge him his right to rank with Paley, and have his name engraved in the same niche of the Temple of Fame which contains his honored bust—if that half-heathen divinity is entitled to adorn her garish walls with names like theirs, which deserve to be inscribed in the most sacred "holy of holies" that ever was erected by human hands!

It is not my intention to follow our Author, as he successively develops the different portions of the great scheme, by which the balance of the food and numbers of Animated Nature is maintained. I shall content myself by glancing at the subject as a whole; adopting similar arguments; and stating those conclusions, which his arguments are so calculated to engender and confirm; in the belief that the reader may be induced to give his work that careful perusal which it deserves. Let us therefore discard for the present the theories of Malthus, regarding the human race. Man, as I have suggested, is an inventive being; and contrives by his ingenuity to find out many ways of subsisting, when pressed by circumstances, which are (among all animals) peculiar to him alone. Let us suppose that only one class of animals had been created—the innocent graminivorous sheep—and of them only a single pair. Let us next suppose those two sheep placed in the favored, fertile Island of Ireland, with no wolves, foxes, bears, dogs, or cayotes (or men), to make them afraid, or molest them—how long do you think, constituted as Nature now is, we could dispense with Death? I will not draw the lines too tightly. Let us suppose that they doubled their numbers every three years. The first year, we have two; the fourth year, four; the seventh, eight; the tenth, sixteen; the thirteenth, thirty-two; the sixteenth, sixty-four; and the nineteenth, one hundred and twenty-eight. But let us make allowances for casualties, and suppose that in round numbers it took the full term of twenty years, before they increased to one hundred—that is, that in twenty years, they would increase fifty-fold. Let us pursue the argument. In twenty years more, in the same ratio, our hundred sheep would amount to five thousand; in other twenty, that is at the end of sixty years, to two hundred and fifty thousand; at the end of eighty, to twelve and a half millions; and at the end of a century, to six hundred and twenty-five millions!—that is, in the course of a century, they would increase more than three million-fold, if the Island had pasturage enough to maintain them. But admitting that point, which I think we ought not to admit, what would become of them before the end of another century? Why, with sufficient pasturage, they would exceed any number which we have ever been called upon to reckon. The National Debt of Great Britain, reduced to copper cents, would not amount to half so much! But for the sake of the argument, let us suppose, not only that we could transport them across St. George's Channel, into the fertile fields of Great Britain (or rather that they could so transport themselves), but also across the English Channel, to the congenial soil and climate of Continental Europe—nay, that they had spread over in addition Asia and Africa, and had also been transported across the raging Atlantic, to depasture on the untrodden soil of North and South America; in less than a thousand years, they would have eaten up every green thing on the face of the habitable globe, even at the most luxuriant season of the year. We cannot dispense with Death. Let us not consider him any more as the King of Terrors. He is our greatest friend. Without him we would require an entirely different system. No more of the playful and innocent gambols of youth. No more of the ingenuity and skill of animals, especially of the feathered races, in providing for their young during their infant helplessness. We would not wish, constituted as we are, to live in such a world. Let the "dance of Death" continue. He is the principal, and most indispensable personage of the whole *dramatis personæ* engaged in the great Comedy of Life, which is so brilliantly being performed. To dispense with him would be as bad as acting the play of Hamlet, as a traveling manager it is said once proposed, with the character of Hamlet left out.

Once admit Death as a necessary evil, if we are still wicked enough to regard him in no better light, and we easily become reconciled to another order of things, very different from anything which our super-humane friends would suggest, but far wiser, and much better suited for our present condition. Where are those dogs, and wolves, and bears, and foxes, which we so unceremoniously dismissed, for the sole sake of our simple sheep? We have admitted Death into our list of friends. At all events he forces himself upon us. We cannot do without him. Whether we will or not, his services are indispensable. We could not otherwise provide for animals increasing in a geometrical ratio, while the length of time which they required to do so was in arithmetical proportion, no matter what that ratio and that proportion were, if the space from which they derive their subsistence is meted by bounds and limits. Bring back those bears, and dogs, and wolves, and foxes; we want them to be the ministers of Death. "What!" methinks I hear some one say, "so many enemies? Why, they would eat up the helpless sheep, if made simultaneously, a thousand times as fast as they grew!" But it is in their variety, their conflicting interest, and the angry passions, with which (to make them answer the purpose for which they were intended) it was necessary to inspire them, that the poor sheep has to place its sole reliance against utter extermination. At first, no doubt, they fix their eyes on their common prey, as the most likely objects with which to fill their greedy maws. But hunger makes them ravenous, and turning from the remnants of the sheep, they soon direct their attention to devouring each other. They are all carnivorous animals; flesh is their natural food; and in their natural condition, they would starve without it. They must have flesh, get it where they may. In the general scramble which takes place, the sheep stand as good a chance as any—in some respects better, for they live on grass and plants; and retiring to the mountains, soon learn to present, in the butting and beetling heads of the males, a not informidable hornwork of defence against ordinary assaults, pitching the yelping curs which are bold enough to attack them, precipitously over the cliffs.

We have admitted Death into the Animal World; we need not hesitate longer in fully recognizing his title, and consenting to any arrangement, whereby animal enjoyment, during its short and uncertain continuance, may be promoted and increased. The sheep have been driven from the fertile valleys, where they would have stood no chance against their formidable and numerous foes—why not fill those valleys with horses and cattle? They will help to draw off, from the harmless sheep, the attention of those bloody executioners which Nature anyhow is obliged to have.

He who has *read attentively* the great Work of Paley cannot fail to admire the mechanical expedients, resorted to under seeming difficulties by the great Designer, in constructing the human frame; but he who glances *but carelessly*, at the varieties in Animated and Vegetable Creation, must be further struck at the different fancies which presented themselves to the Author of all. It is not in man only that there is perfection. Every creature is perfect after its kind, and for the purpose for which it was intended; and yet how many different kinds of animals do we find? All Creation is full of life—as full to all appearance as it was possible to fill it—not only the earth, but the water—not only the water, but the air! Nay, every tree, and shrub, and plant of every kind, and every visible animal is a little world of itself, where myriads of living creatures, in some instances of almost infinite minuteness, revel, and enjoy existence, with scarcely an effort wanted on their part to procure all the pleasures which their situation and nature admit of, or they are capable of receiving, or in their hearts desire! But they are all necessarily subject to the doom of Nature; without which, as we have seen, any one species would soon be deprived of the means of subsistence, from the mere fact of its increase in numbers preventing it after a time from finding anything to eat. What better or more benevolent plan could have been devised than to make the one species the food of the other; not at hap-hazard, but so arranged, as it is, that those lower in the scale increase more rapidly, and those which prey upon them more slowly, and so evenly balanced that the machinery, till man makes his appearance, is capable of regulating itself, and moving on *in perpetuum*, without the interposition of its most ingenious Contriver?

AGRICOLA.

AGATE,

Roan, calved Dec. 6, 1850, bred by Robert Bell, Mosbro' Hall, Rainford, Lancashire, England; the property of Geo. Vail, of Troy, N.Y., and S. P. Chapman, Mount Pleasant Farm, Clockville, Madison county, N.Y.; got by Third Duke of York (10166), dam [Annie] by Second Cleveland Lad (3408), g. d. [Annabella] by Duke of Cleveland (1937), gr. g.d. [Acomb] by Belvedere (1706)—a cow bought of Mr. Bates.

HALTON (11552),

Red roan, calved August 22, 1847; bred by Geo. Vail, Esq., of Troy, N. Y.; the property of S.P. Chapman, Mount Pleasant Farm, Clockville, Madison county, N. Y.; got by Meteor 104 (11811), dam [Lady Barrington 3d] by Cleveland Lad (3407), g. d. [Lady Barrington 2d] by Belvedere (1706), gr. g. d. [Lady Barrington] by a son of Herdsman (304)—[Young Alicia] by Wonderful (700)—[Alicia] by Alfred (23)—by Young Favorite (6994).

FRANTIC,

Roan, calved September 3, 1850; bred by Robt. Bell, Mosbro' Hall, Rainford, England; the property of Geo. Vail, Troy, N. Y., and S. P. Chapman, Mount Pleasant Farm, Clockville, Madison Co., N. Y; got by Fourth Duke of York (10167), dam [Faith] by Fourth Duke of Northumberland (3649), g. d. [Fidget] by Second Earl of Darlington (1945), gr. g. d. [Fletcher] by a son of Young Wynyard (2859)—descended from J. Brown's Old Red Bull (97).

HALTON is a Bates bull—his dam, Lady Barrington 3d, having been bred by Mr. Bates. His sire, Meteor, was from a cow [Duchess], and bull [Duke of Wellington 55 (3654)], each bred by Mr. Bates, and imported by Mr. Vail. Halton has won two first prizes at the shows of the New York State Agricultural Society, and also the diploma at the show of the same society, held at Elmira in 1855. Meteor and Lady Barrington 3d, are also first prize animals.

Agate and Frantic were imported by Mr. Vail and Mr. Chapman in 1853, with two other heifers from Mr. Bell's herd, viz: Bonkie, roan, got by Fourth Duke of York (10167), dam [Cicely] by Duke of Northumberland (1940) &c. &c., and Bright Eyes 3d by Earl Derby (10177), dam [Bright Eyes 2d] by Lord George Bentinck (9317), &c. &c.

It will readily be seen, by a reference to their pedigrees, how deeply they are bred in the blood of Mr. Bates' very best Duchess bulls.

Suisun Country Society.

THE following letter from our correspondent and agent in this beautiful section of our State affords us great pleasure. Our pleasant tour there, as will be seen from the letter, has induced them to feel the importance of organizations at which we shall rejoice, and will cheerfully aid all in our power.

We refer our friend to preceding numbers of the FARMER for the plans of several constitutions which have been adopted by societies in our State. These are the principal features. The rules and regulations should be made to suit time and place, means and opportunities of the people composing the society. We will send our friend a number of our paper containing such information as will aid in the construction of the society; and we hope most sincerely that it will an efficient one:

LIVE OAK FARM, Suisun Valley, May 19th, 1857.

EDITOR FARMER: Since your visit to our valley I have mentioned the subject of an agricultural association, and quite a number of my neighbors and friends agree with me that it will be a source not only of profit to all, but of pleasure—and also that you be requested to give us, through the columns of the FARMER, some hints upon the formation and working principles of the Society. Your journal is daily increasing in circulation, as well as interest, in this valley.

The young people celebrated the first of May with feasting in the open fields; dancing on the green in the afternoon, and in the Masonic Hall in Suisun in the evening. Everything went off pleasantly, and all were well pleased. Some fifty persons sat down to the dinner.

Please send your paper to the names given you, for which you will find the amount inclosed.

Yours truly, M. RICHARDSON.

Plant Sugar Beet

THIS important vegetable can be planted successfully, until the first of July, while the soil is in good order, and an enormous crop can be raised. There cannot be a crop more profitable raised, than the one now named, both for feed and for the purpose of sirup and sugar, of which we have no doubt there will be a demand.

☞ Among the prosperous Flouring Mills of our State, none excels that of the noble Pioneer of Napa county, Geo. C. Yount, Esq., who has recently sent into the market 5000 sacks of his splendid Flour. This always commands a high price and finds a ready sale.

State Agricultural Fair!

CATTLE SHOW AND INDUSTRIAL EXHIBITION,

AT STOCKTON,

On SEPTEMBER 29, 30, and OCTOBER 1 and 2, 1857.

THE ANNUAL FAIR, for the Exhibition of the Products of the Soil, and of Industry, will be held as above, in the large Court House Building and Grounds adjacent, which will be inclosed and covered for that purpose.

THE CATTLE SHOW will be held at the CENTRAL RACE COURSE, one mile northeast of the city. The avenues leading from the Court House Building to the Cattle Show Ground, will be kept well sprinkled and free from dust.

PREMIUMS OFFERED FOR 1857.

AMOUNTING TO OVER $6,000.

Farms, Orchards, Vineyards and Field Crops.

Competitors for Premiums in this Department are to give immediate notice of their intention to the President or Corresponding Secretary, that the Committee may visit and examine at the most favorable time. No such notice will be expected to claim the attention of the Committee, unless received before the first day of August.

For the best Essay on the treatment of Alkaline soil, setting forth the relative adaptation of different fruit, grain, flowers, &c., to such soil 50
Or if accompanied with a certified analysis of the soil from a competent analyst 100
For the best Essay and Classification of the Native California Grasses 50
For the best Essay on Quartz Mining 50
For the best mode of destroying Squirrels and Gophers, accompanied by actual experiments 50

[All the above Essays must be accompanied by a list of Experiments to prove the Theory advanced.]

Discretionary Premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of Premiums.

Each Committee is authorized to recommend Special Premiums upon objects which properly belong to the class assigned to it.

The Judges appointed will in every instance "withhold Premiums on animals or articles, that, in their opinion, are not worthy, though there be no competition;" and no stock of inferior quality will be admitted within the ground.

The Managers of the Society will be present during the Fair, to give directions to all who may wish to enter animals or any articles for Premiums or exhibition, and forage will be furnished gratis for all animals entered for Premiums.

The various Premiums awarded will be promptly paid upon the reception of the State Premium Fund of $5,000, which is wholly devoted to this purpose.

SPECIAL PREMIUMS.

For Ladies in Saddle.

N. B.—No competitor will be allowed to enter this list without a card from a Committee, to secure ladies from improper association.

To the most accomplished Lady Rider ..... a Saddle $75
2d do do do do do .. Silver Plate 30

Special Purse Premiums.

☞ An opportunity will be given for the trial of the Strength of Teams, and the Speed of Horses, running against time; the Premiums being provided in each department by an extra Entrance Fee of Five Dollars, three-fourths of which shall be allotted to the best animal or team in its class, the other fourth to be awarded as a second Premium; the winner of the first prize in every case to be entitled to a Diploma of the Society, as an additional Premium.

Under this head entries may be made—

For Pacing Horses, For Trotting Horses,
For Running Horses, For Draft Teams of Horses,
For Draft Teams of Mules, For Draft Teams of Oxen.

☞ The Society offers a **Purse of $250**, free to all California-bred Horses—three years old last Spring—one mile heats—best two in three—ride as they please—to be run on Friday, October 2d, at 2 o'clock, P. M.

EXECUTIVE COMMITTEE:

WM. GARRARD, President.
E. S. HOLDEN, First Vice-President.
J. O. COBB, Corresponding Secretary.
GEO. H. SANDERSON, Recording Secretary.
P. EDWARD CONNER, Treasurer.

Wants of Agriculture.

THESE are too numerous to be mentioned in detail, and our effort will be simply to discuss a few of the more urgent and comprehensive; and the first is, the adoption into its practice, of those habits of system, method, and accuracy, which are found indispensable to success in all branches of business whatever—*business habits*; or in other words, that Agriculture be pursued *as a business*, in distinction from and preference to, pursuing it as a calling or employment, by means of which the tiller of the soil hopes to *earn* his bread, his taxes, and something more. This is not a distinction without a difference, nor is the difference a trivial one. By employment, is understood that in which labor and skill are disposed of for an equivalent. The mechanic who works for wages does this, and cannot properly be termed a business man. If a good workman at his calling, prudent and economical in the management of his affairs, he is a thriving man. He gradually acquires a competency, or it may be, wealth; but it is plainly upon his *earnings*, that he does this, and not upon his *profits*. In it, he is not transacting business, but simply disposes of his labor and skill at their market value. Business, on the other hand, is not employment in which a man earns wages simply, but that in which profit is to be realized or loss incurred, as it is successful or otherwise, aside from, and independent of, wages. As farming is conducted in this State, is it a business or an occupation? Is it looked upon by those engaged in it, as that which simply affords remuneration for services rendered, or as that which yields a net profit over and above wages, interest upon capital, and all expenses? It is believed few will pretend, that as at present managed, with a very few exceptions, it is an occupation of which profit or loss can be fairly predicated, but is rather a calling, by means of which the cultivator hopes to earn a livelihood. Few indeed are there who can even tell what their crops, or any other farm products cost, or whether when sold, they yield a profit or not; and what should we think of a business man who did not know the cost of the wares in which he deals?

Now I hold that *until Agriculture be pursued as a business, and until we have faith in it as a profitable one*, it can never attain the degree of improvement otherwise practicable, and there are some considerations going to show that farmers now generally *lack faith* in their pursuit as a business, some of which will be noticed; and first, it is very common to hear farmers say they cannot afford to hire help to carry on their farms. Why this, if they have confidence in it as yielding a profit after paying wages and other expenses? It is not so with the merchant and manufacturer, for they unhesitatingly employ all the help necessary to carry on their business, and because they have confidence in it, believing that those they employ will not only earn their wages, but will themselves reap a profit as the ultimate result of their labor. Another fact: suppose a farmer with prudence and economy, by rising early and working late, and eating the bread of carefulness, amasses some dollars, what does he do with them? Does he, as do the merchant and manufacturer, invest them in his business to increase his working capital, and improve or enlarge his operations? No; as a body, our thrifty farmers are content to loan their dollars at legal interest, and realize a profit upon their use. If the farmer had faith in his occupation as a business, he would save this profit to himself, as well as secure the interest. Again, men in business, if they have not ample capital, do not hesitate to borrow money to carry it on, and sometimes at rates of interest above the legal one; and they do this because they believe that by so doing, they can pay the interest, and make a profit beside, while with our farmers, who as a body are confessedly embarrassed for want of working capital, not one in a dozen dares to borrow money to invest in agricultural operations. They may, from necessity, incur debt for the purchase of lands, the erection of buildings, etc., which becomes fixed capital, but very few are they who dare to borrow to use as working capital. It is not so in other countries. In England agriculturists make, what to us, with our style of farming, seems the most lavish use of working capital in their operations, as well as landholders of fixed capital in permanent improvements. It is not uncommon there for the landlords to add to the value of their estates beyond the cost of the land, buildings and inclosures, from forty to a hundred dollars per acre in permanent improvements, as thorough draining, etc., and then for farmers to rent such at the usual rates of interest on fixed capital, and themselves using from thirty to sixty dollars per acre of working capital to carry it on; and they do a profitable business at it. The money-lending farmers of Maine would probably much prefer to see an operator bold enough to do likewise, put under guardianship, rather than trust him with any of their funds.

Lavergne, in his interesting and valuable work on the Rural Economy of England, Scotland, etc., comparing English and French Agriculture, says: "All make advances to the land with implicit confidence. In that country, where manufactures and commerce offer such inducements for the employment of capital, many people prefer to embark their money in Agriculture. While our farmers are sparing to the last degree, considering that what is saved is gain, in England they try who can put most money into the land. The small farmer, who has only a few hundred pounds of patrimony, does not hesitate to embark it any more than the great capitalist who has ten times, or a hundred times as much. Both launch out together, and generally upon the faith of an ordinary annual lease, expending sums which would seem enormous with us, and which proprietors alone would here undertake."

How can this wide difference between the farmers of Maine and the farmers of England, where Agriculture has confessedly attained the highest degree of improvement yet developed anywhere, or between our farmers and business men, properly so called, immediately around them, be accounted for otherwise than because the one lacks, and the other has faith in it as a business in which capital and skill may be profitably employed?

If it be inquired how this lack of confidence has so generally obtained, the answer may probably be found, in part, from the imperfect modes of cultivation generally pursued, and which result in far too scanty and precarious crops, but mainly from the fact that farming is not, except in a few isolated cases, carried on in such a systematic manner, that the operators themselves know with certainty, whether the pursuit yields a profit or not. Hence the question so often asked, whether farming be profitable or not, has received widely different answers, or rather opinions, and the reason is, that there are scarce any data from which to judge.

It is an undoubted fact, that agricultural pursuits are more surely remunerative, and more certainly yield a comfortable competence to such as engage in them with skill, energy and perseverance, than trade, commerce, manufactures, or any of the so called learned professions. It has been shown on good authority, that about two-thirds of those who engage in trade make disastrous failure of it; that about one-third only are even moderately successful, and only one in a hundred eminently so. With the tillers of the soil, it is otherwise. Few either fail or amass great wealth, while the great majority attain comparative competence and comfort.

But in order to command confidence as a pursuit, and to attract all needful aids to the highest degree of successful development, it is necessary to show that it actually does, or may be made to yield a fair profit on capital invested, over and above wages and all other charges. And how is this point to be settled? Plainly in the same manner as the merchant or manufacturer determines the same point in relation to their business—viz: by keeping exact accounts and making the proper entries to debt and credit. The trader charges the cost of his goods, transportation, rents, clerk-hire and the various expenses incident to his business, and credits sales. The manufacturer makes the proper entries regarding investments in buildings, machinery, raw materials, labor, repairs, etc., etc., and the merchant regarding the cost of his ships, outfits, labor, insurance, etc., and both credit the returns yielded, and the ledger will show, beyond a peradventure, whether the business be profitable or not. Now such a system of accounts is what is needed by the farmer, in order that he may be able to determine with a good degree of certainty, what his crops and other products cost, and whether they yield a profit or not, when sold.

It must by no means be forgotten, that so long as the farmer can obtain the cost of his products only, he has no reason to be discouraged, because he can live comfortably upon the wages which is a part of the cost; but if his products cost more than they will bring in market, it is time to cast about and ascertain the cause, and in doing this, it is highly probable, that much may be developed hitherto unsuspected. For instance, he may find that one acre of corn, yielding thirty bushels, costs a dollar per bushel, while another upon which more has been expended in manuring and deeper tillage, yields sixty bushels, at a cost of only seventy-five cents per bushel; or he may find that his crops or his mode of cultivation are not those best adapted to the kind of soil—or that being remote from market, he has hitherto lost a large proportion of the price obtained, in expenses of transportation, and so might do better to turn his hay, grain, or roots, into beef, pork, or mutton, and thus save much. He may find that his implements are not as good as those of others, who can afford to sell cheaper—or his manures too scanty in quantity, or deficient in quality. He may find a thousand leakages which need to be stopped, and not unlikely that a radical change of policy may be required, as from tillage to grazing, or vice versa, as a main and leading object. Not only has each section of country its natural advantages or disadvantages, as soil, climate, proximity or remoteness of market, but so likewise has each farm in a greater or less degree, and true policy dictates that the advantages should be so followed up as to secure the best possible returns for labor, skill, and capital invested.

As division of labor in other departments of industry greatly enhances profits, and is often the sole dependence for success, why may it not be so with agriculture? The man who has an intelligent insight into his affairs through accurate accounts, may see clearly, that if his means, skill, and energy, were concentrated on one main branch, he could more thoroughly understand, and more profitably conduct it.

What is urged in this connection, is not mere matter of theory. In other pursuits it has been abundantly demonstrated in practice, nor is it without illustration in some instances among us in agricultural operations. It has been said that retired merchants, sea captains and military men, make the best of farmers. Whether this be just so or not, observation will convince any one, that a great majority of the men, who, to-day, are not only elevating and ennobling the profession of agriculture, but actually are the most successful in a pecuniary point of view, are men who were either bred in the counting-room, or elsewhere have acquired habits of exactness, accuracy and method, and that their success is in a great degree owing to their possession and use.

It may be thought that undue stress has been laid on this as a prominent want of agriculture, and perhaps it is over estimated, but our conviction is strong that if it be supplied, not only will other wants present themselves in so doing, but ways and means will somehow or other be devised to supply them, and that rapid improvement will ensue.—[Report Maine Board of Agriculture.

Rebottoming a Pear Tree.

A few years ago, I grafted a large quince tree with the Duchess d'Angouleme pear. Not understanding then, as I now do, the importance of working the quince *below* the surface of the ground, I grafted it six or eight inches high. The growth of the cion, the first two or three years, was very rapid and vigorous. In examining it the third spring, the quince stock was found to be cracking, and showing signs of "giving out." As an experiment, I took a thrifty pear stock of the second year, set it out as near the tree as the roots of the quince would allow, and budded it into the pear cion, just above where it was grafted, confining with matting, and covering it well with grafting composition. Before autumn, the more vigorous growth of the side of the graft in which the pear stock was budded, plainly showed, to my great satisfaction, that my experiment had succeeded. Late in the autumn, the composition and matting were removed, exhibiting a most perfect and beautiful union of the pear stock and the graft.

I then set out on different sides two more pear stocks. As the bark of the graft would not peel, these stocks were fitted into grooves or mortices, and fastened as before with matting and composition. The next autumn showed that these had also united. Now the original quince, with its roots, is entirely dead; and my fine, tall, thrifty Duchesse d'Angouleme, having been *rebottomed*, stands on three legs, on pear stocks! The quince stock has not yet been removed, as it still renders some support, though no *nourishment*, to the tree. The tree has become flattened in the center, directly above the quince, where it gets no nourishment, being quite thin. It has fruited two or three years. As this tree is quite a curiosity to those who have seen it, and believing that a similar process would save many dwarf pears that would otherwise be lost, I have ventured to communicate my experiment for the benefit of any who may not know of this remedy.

I have two other trees that were grafted at the same time with the above, a Beurre Diel and a St. Ghislian, now growing and bearing finely, which derive their nourishment *both* from their original quince stocks, and from a fine large pear stock that has been budded into them as above. The quince stock of the Beurre Diel begins to exhibit signs of decay, and will, probably, die in a year or two, leaving the tree well supported on its new foundations.—[A. B. in N. E. Farmer.

American Marble.

IN West Rutland, Vermont, marble is obtained which has no superior in the world, and some of it has been exported to Rome, ordered by Italian sculptors; it has a fine grain, and works beautifully under the chisel. In Great Barrington, in that State, there is a flexible marble, which bends like a bow when wet. Black Marble equal to that of Ireland is found in New York, and verd antique is found in many districts, and in every State, in almost every variety. This latter article, on careful examination, has been found to have for its basis an indefinite mixture of serpentine and greenish white talc; with a silicate of alumina and protoxyde of iron and manganese, which serves to render it compact, and probably imparts much of the green color. Some specimens contain, also, actinolite, with talc firmly united, so as to present a close texture and considerable resistence to fracture. The portion of chrome iron ore in crystaline grains varies in different specimens, but it is never large enough to seriously interfere with the operations of sawing and polishing.

California can add to the list of marbles many very beautiful specimens of all shades. A number of specimens will be shown at the coming State Fair, which, for beauty of color or grain, will vie with any marble in the world.

THE RETURNING ANSWERS.—Hear the story of the child which went forth into the mountain ravine. Whilst the child wandered there he cried aloud, to break the loneliness, and heard a voice which called to him in the same tone. He called again, and, as he thought, the voice again mocked him. Flushed with anger, he rushed to find the boy who insulted him, but could find none. He then called out to him in anger, and with all abusive epithets—all of which were faithfully returned to him. Choking with rage, the child ran to his mother and complained that a boy in the woods had abused and insulted him with many vile words. But the mother took her child by the hand, and said, "My child, these names were but the echoes of thine own voice. Whatever thou didst call was returned to thee from the hillside. Hadst thou called out pleasant words, pleasant words had returned to thee. Let this be thy lesson through life. The world will be the echo of thine own spirit. Treat thy fellows with unkindness and they will answer with unkindness; with love, and thou shalt have love. Send forth sunshine from thy spirit, and thou shalt never have a clouded day; carry about a vindictive spirit, and even in the flowers shall lurk curses. Thou shalt receive ever what thou givest, and that alone." Always, said the speaker, is that child in the mountain passes—and every man and every woman is that child.

EFFECTUAL PREVENTIVE.—There exists in some parts of Germany a law to prevent drinking during Divine service. It runs thus: "Any person drinking in an ale house during Divine service on Sunday, or other holiday, may legally *depart without paying*."

Miscellany.

NOTHING TO WEAR.

AN EPISODE OF CITY LIFE.

[The following satire in Harper's Weekly upon the extravagance of dress was designed for the meridian of New York, but might, in some instances, apply elsewhere:]

Miss Flora M'Flimsey, of Madison Square,
Has made three separate journeys to Paris,
And her father assures me, each time she was there,
That she and her friend Mrs. Harris
(Not the lady whose name is so famous in history,
But plain Mrs. H., without romance or mystery),
Spent six consecutive weeks without stopping,
In one continuous round of shopping;
Shopping alone, and shopping together,
At all hours of the day, and in all sorts of weather;
For all manner of things that a woman can put
On the crown of her head or the sole of her foot,
Or wrap round her shoulders, or fit round her waist,
Or that can be sewed on, or pinned on, or laced,
Or tied on with a string, or stiched on with a bow,
In front or behind, above or below:
For bonnets, mantillas, capes, collars, and shawls;
Dresses for breakfasts, and dinners, and balls;
Dresses to sit in, and stand in, and walk in;
Dresses to dance in, and flirt in, and talk in;
Dresses in which to do nothing at all;
Dresses for winter, spring, summer and fall;
All of them different in color and pattern,
Silk, muslin, and lace, crape, velvet, and satin,
Brocade, and broadcloth, and other material
Quite as expensive and much more ethereal;
In short, for all things that could ever be thought of,
Or milliner, *modiste*, or tradesman be bought of,
From ten-thousand-francs robes to twenty-sous frills;
In all quarters of Paris, and to every store,
While M'Flimsey in vain stormed, scolded, and swore,
They footed the streets, and he footed the bills.

The last trip, their goods shipped by the steamer Arago
Formed, M'Flimsey declares, the bulk of her cargo,
Not to mention a quantity kept from the rest,
Sufficient to fill the largest sized chest,
Which did not appear on the ship's manifest,
But for which the ladies themselves manifested
Such particular interest, that they invested
Their own proper persons in layers and rows
Of muslins, embroideries, worked under-clothes,
Gloves, handkerchiefs, scarfs, and such trifles as those;
Then, wrapped in great shawls, like Circassian beauties,
Gave *good-by* to the ship, and *go-by* to the duties.
Her relations at home all marveled no doubt,
Miss Flora had grown so enormously stout
For an actual belle and a possible bride;
But the miracle ceased when she turned inside out,
And the truth came to light and the dry goods beside,
Which, in spite of Collector and Custom-house sentry,
Had entered the port without any entry.

And yet, though scarce three months have passed since the day
This merchandise went, on twelve carts, up Broadway,
This same Miss M'Flimsey of Madison Square,
The last time we met was in utter despair,
Because she had nothing whatever to wear!

Nothing to wear! Now, as this is a true ditty,
I do not assert—this, you know, is between us—
That she's in a state of absolute nudity,
Like Powers' Greek Slave, or the Medici Venus:
But I do mean to say, I have heard her declare,
When, at the same moment, she had on a dress
Which cost five hundred dollars, and not a cent less,
And jewelry worth ten times more, I should guess,
That she had not a thing in the wide world to wear!

I should mention just here, that out of Miss Flora's
Two hundred and fifty or sixty adorers,
I had just been selected as he who should throw all
The rest in the shade, by the gracious bestowal
On myself, after twenty or thirty rejections,
Of those fossil remains which she called "her affections,"
And that rather decayed, but well-known work of art,
Which Miss Flora persisted in styling "her heart."
So we were engaged. Our troth had been plighted,
Not by moonbeam or starbeam, by fountain or grove,
But in a front parlor, most brilliantly lighted,
Beneath the gas-fixtures we whispered our love.
Without any romance, or raptures, or sighs,
Without any tears in Miss Flora's blue eyes,
Or blushes, or transports, or such silly actions,
It was one of the quietest business transactions,
With a very small sprinkling of sentiment, if any,
And a very large diamond imported by Tiffany.
On her virginal lips while I printed a kiss,
She exclaimed in a sort of parenthesis,
And by way of putting me quite at my ease,
"You know I'm to polka as much as I please,
And flirt when I like—now *stop*, don't you speak—
And you must not come here more than twice in the week,
Or talk to me either at party or ball,
But always be ready to come when I call;
So don't prose to me about duty and stuff,
If we don't break this off, there will be time enough
For that sort of thing; but the bargain must be
That, as long as I choose, I am perfectly free,
For this is a sort of engagement, you see,
Which is binding on you but not binding on me."

Well, having thus wooed Miss M'Flimsey and gained her,
With the silks, crinolines, and hoops that contained her,
I had, as I thought, a contingent remainder
At least in the property, and the best right
To appear as its escort by day and by night;
And it being the week of the Stuckup's grand ball—
Their cards had been out a fortnight or so,
And set all the Avenue on the tip-toe—
I considered it only my duty to call,
And see if Miss Flora intended to go.
I found her—as ladies are apt to be found,
When the time intervening between the first sound
Of the bell and the visitor's entry is shorter
Than usual—I found; I won't say—I caught her—
Intent on the pier-glass, undoubtedly meaning
To see if perhaps it didn't need cleaning.
She turned as I entered—"Why, Harry, you sinner,
I thought that you went to the Flashers' to dinner!"
"So I did," I replied, "but the dinner is swallowed,
And digested, I trust, for 'tis now nine and more,
So being relieved from that duty, I followed
Inclination, which led me, you see, to your door.
And now will your ladyship so condescend
As just to inform me if you intend
Your beauty, and graces, and presence to lend
(All which, when I own, I hope no one will borrow),
To the Stuckup's, whose party, you know, is to-morrow?"
The fair Flora looked up with a pitiful air,
And answered quite promptly, "Why Harry, *mon cher*,
I should like above all things to go with you there;
But really and truly—I've nothing to wear."

"Nothing to wear! go just as you are;
Wear the dress you have on, and you'll be by far,
I engage, the most bright and particular star
On the Stuckup horizon"—I stopped, for her eye,
Notwithstanding this delicate onset of flattery,
Opened on me at once a most terrible battery
Of scorn and amazement. She made no reply,
But gave a slight turn to the end of her nose
(That pure Grecian feature), as much as to say,
"How absurd that any sane man should suppose
That a lady would go to a ball in the clothes,
No matter how fine, that she wears every day!"
So I ventured again—"Wear your crimson brocade,"
(Second turn up of nose)—"That's too dark by a shade."
"Your blue silk"—"That's too heavy;" "Your pink"—
"That's too light."
"Wear tulle over satin"—"I can't endure white."
"Your rose-colored, then, the best of the batch"—
"I haven't a thread of point lace to match."
"Your brown moire antique"—"Yes, and look like a Quaker;"
"The pearl-colored"—"I would, but that plaguey dress-maker
Has had it a week"—"Then that exquisite lilac,
In which you would melt the heart of a Shylock."
(Here the nose took again the same elevation)
"I wouldn't wear that for the whole of creation."
"Why not? It's my fancy, there's nothing could strike it
As more *comme il faut*—" "Yes, but, dear me, that lean
Sophronia Stuckup has got one just like it,
And I won't appear dressed like a chit of sixteen."
"Then that splendid purple, that sweet Mazarine;
That superb *point d'aiguille*, that imperial green,
That zephyr-like tarleton, that rich *grenadine*"—
"Not one of all which is fit to be seen,"
Said the lady, becoming excited and flushed.
"Then wear," I exclaimed, in a tone which quite crushed
Opposition, "that gorgeous *toilette* which you sported
In Paris last spring, at the grand presentation,
When you quite turned the head of the head of the nation;
And by all the grand court were so very much courted."
The end of the nose was portentously tipped up,
And both the bright eyes shot forth indignation,
As she burst upon me with the fierce exclamation,
"I have worn it three times at the least calculation,
And that and the most of my dresses are ripped up!"
Here *I ripped out* something, perhaps rather rash,
Quite innocent, though; but to use an expression
More striking than classic, it "settled my hash,"
And proved very soon the last act of our session.
"Fiddlesticks, is it, Sir? I wonder the ceiling
Doesn't fall down and crush you—oh, you men have no feeling,
You selfish, unnatural, illiberal creatures,
Who set yourselves up as patterns and preachers.
Your silly pretense—why what a mere guess it is!
Pray, what do you know of a woman's necessities?
I have told you and shown you I've nothing to wear,
And it's perfectly plain you not only don't care,
But you do not believe me" (here the nose went still higher).
"I suppose if you dared you would call me a liar.
Our engagement is ended, Sir—yes, on the spot;
You're a brute, and a monster, and—I don't know what."
I mildly suggested the words—Hottentot,
Pickpocket, and cannibal, Tartar and thief,
As gentle expletives which might give relief;
But this only proved as spark to the powder,
And the storm I had raised came faster and louder,
It blew and it rained, thundered, lightened and hailed
Interjections, verbs, pronouns, till language quite failed
To express the abusive, and then its arrears
Were brought up all at once by a torrent of tears,
And my last faint, despairing attempt at an observation was lost in a tempest of sobs.

Well, I felt for the lady, and felt for my hat, too,
Improvised on the crown of the latter a tattoo,
In lieu of expressing the feelings which lay
Quite too deep for words, as Wordsworth would say;
Then, without going through the form of a bow,
Found myself in the entry—I hardly knew how—
On door-step and sidewalk, past lamp-post and square,
At home and up stairs, in my own easy chair;
Poked my feet into slippers, my fire into blaze,
And said to myself, as I lit my cigar,
Supposing a man had the wealth of the Czar
Of the Russias to boot, for the rest of his days,
On the whole, do you think he would have much to spare
If he married a woman with nothing to wear?

Since that night, taking pains that it should not be bruited
Abroad in society, I've instituted
A course of inquiry, extensive and thorough,
On this vital subject, and find, to my horror,
That the fair Flora's case is by no means surprising,
But that there exists the greatest distress
In our female community, solely arising
From this unsupplied destitution of dress,
Whose unfortunate victims are filling the air
With the pitiful wail of "Nothing to wear."
Researches in some of the "Upper Ten" districts
Reveal the most painful and startling statistics,
Of which let me mention only a few:
In one single house, on the Fifth Avenue,
Three young ladies were found, all below twenty-two,
Who have been three whole weeks without anything new
In the way of flounced silks, and thus left in the lurch
Are unable to go to ball, concert or church.
In another large mansion near the same place
Was found a deplorable, heart-rending case
Of entire destitution of Brussels point lace.
In a neighboring block there was found, in three calls,
Total want, long-continued, of camels'-hair shawls;
And a suffering family, whose case exhibits
The most pressing need of real ermine tippets;
One deserving young lady, almost unable
To survive for the want of a new Russian sable;
Another confined to the house when it's windier
Than usual, because her shawl isn't India.
Still another, whose tortures have been most terrific
Ever since the sad loss of the steamer Pacific,
In which were ingulfed, not friend or relation
(For whose fate she perhaps might have found consolation,
Or borne it, at least, with serene resignation),
But the choicest assortment of French sleeves and collars
Ever sent out from Paris, worth thousands of dollars,
And all as to style most *recherche* and rare,
The want of which leaves her with nothing to wear,
And renders her life so drear and dyspeptic
That she's quite a recluse, and almost a skeptic,
For she touchingly says that this sort of grief
Can not find in Religion the slightest relief,
And Philosophy has not a maxim to spare
For the victims of such overwhelming despair.
But the saddest by far of all these sad features
Is the cruelty practiced upon the poor creatures
By husbands and fathers, real Bluebeards and Timons,
Who resist the most touching appeals made for diamonds
By their wives and their daughters, and leave them for days
Unsupplied with new jewelry, fans or bouquets,
Even laugh at their miseries whenever they have a chance,
And deride their demands as useless extravagance;
One case of a bride was brought to my view,
Too sad for belief, but alas! 't was too true,
Whose husband refused, as savage as Charon,
To permit her to take more than ten trunks to Sharon.
The consequence was, that when she got there,
At the end of three weeks she had nothing to wear,
And when she proposed to finish the season
At Newport, the monster refused out and out,
For his infamous conduct alleging no reason,
Except that the waters were good for his gout;
Such treatment as this was too shocking, of course,
And proceedings are now going on for divorce.

But why harrow the feelings by lifting the curtain
From these scenes of woe? Enough, it is certain,
Has here been disclosed to stir up the pity
Of every benevolent heart in the city,
And spur up humanity into a canter
To rush and relieve these sad cases instanter.
Won't somebody, moved by this touching description,
Come forward to-morrow and head a subscription?
Won't some kind philanthropist, seeing that aid is
So needed at once by these indigent ladies,
Take charge of the matter? or won't Peter Cooper
The corner-stone lay of some splendid super-
Structure, like that which to-day links his name
In the Union unending of honor and fame;
And found a new charity just for the care
Of these unhappy women with nothing to wear,
Which, in view of the cash which would daily be claimed,
The *laying-out* Hospital well might be named?
Won't Stewart, or some of our dry-goods importers,
Take a contract for clothing our wives and our daughters?
Or, to furnish the cash to supply these distresses,
And life's pathway strew with shawls, collars, and dresses,
Ere the want of them makes it much rougher and thornier
Won't some one discover a new Californ-i-a?

Oh ladies, dear ladies, the next sunny day
Please trundle your hoops just out of Broadway,
From its whirl and its bustle, its fashion and pride,
And the temples of Trade which tower on each side,
To the alleys and lanes, where Misfortune and Guilt
Their children have gathered, their city have built;
Where Hunger and Vice, like twin beasts of prey,
Have hunted their victims to gloom and despair;
Raise the rich, dainty dress, and the fine broidered skirt,
Pick your delicate way through the dampness and dirt,
Grope through the dark dens, climb the ricketty stair,
To the garret, where wretches, the young and the old,
Half-starved and half-naked, lie crouched from the cold.
See those skeleton limbs, those frost-bitten feet,
All bleeding and bruised by the stones of the street;
Hear the sharp cry of childhood, the deep groans that swell
From the poor dying creature who writhes on the floor,
Hear the curses that sound like the echoes of Hell,
As you sicken and shudder and fly from the door;
Then home to your wardrobes, and say, if you dare—
Spoiled children of Fashion—you've nothing to wear!

And oh, if perchance there should be a sphere,
Where all is made right which so puzzles us here,
Where the glare, and the glitter, and tinsel of Time
Fade and die in the light of that region sublime,
Where the soul, disenchanted of flesh and of sense,
Unscreened by its trappings, and shows, and pretense,
Must be clothed for the life and the service above,
With purity, truth, faith, meekness and love;
Oh, daughters of Earth! foolish virgins, beware!
Lest in that upper realm you have nothing to wear!

The Want of Sunshine.

"YOUR city horses don't get enough sunshine," said a shrewd farmer, "and no wonder, therefore, they are so often unhealthy. In the coldest days of winter, when it was clear, my old father used to take his horses out of the stable, and tie them to the fence in the middle of the day, so that they might get sunshine."

There was even more wisdom in the farmer's speech than he supposed. It is not horses only that suffer for want of sunshine. Thousands of persons living in cities injure their health because of the want of sunshine. The over-worked operative, who is confined all day in a dark, ill-ventilated room, owes not a little of his fondness for a dram to the absence of the light, joyous, exhilarating sunshine. The pale, sickly child, that by and by is laid in its coffin, amid the sobs of its heart-broken mother, might probably have grown up to a vigorous manhood if it had been bred on a breezy, clover-decked sunshiny hillside. Who can compute the adults who die annually of consumption solely because they have deprived themselves of sunshine year after year? In the physical life of Americans, especially those who dwell in cities, there is no deficiency so marked and fatal as that of the want of sunshine. The human animal requires sunshine quite as much as a plant.

But we need sunshine in a moral sense also. We are too grave and serious a people. We rack our nervous systems to pieces and prematurely destroy our digestion by the neglect of seasonable recreation, or by amusements that are such only in name. As old Froissart said of the English four hundred years ago, "we take our pleasures sadly as is our fashion." Man is a laughing animal—the only laughing animal there is. Nature intended that a due proportion of mirth and merriment should be his. "All work and no play," "makes Jack a dull boy." The English people were never more heroic than in that almost Arcadian time when their country went by the name of "merrie England," and when, after the transition period during which Froissart wrote, and in which civil war made the nation naturally sad even in their pleasures, they were prosperous, happy and festive. It is impossible to believe that what tradition says of the last fifty years of the sixteenth century in England is all poetic exaggeration. The love of music alone—a love which then existed among all classes, but which, alas, has long ago died out—is a proof to the contrary. It was an age when there was sunshine, metaphorically speaking, all over the realm of England; and the natural results followed, great deeds and generally diffused happiness.

It is said, however, that we have too solemn a mission before us, as a people, to be otherwise than grave. But it is a mistake to suppose a serious aspect indispensable to success; as fatal as to confound a long face and sour aspect with religion. The healthiest man, all things else being alike, is not only the cheerfulest but the best. By overworking our brains and denying ourselves amusement, we become irritable and peevish, and therefore unjust. Our homes are too often but gloomy dens, where we retire after the day's labor is done, to snarl at wives who are fretful, because so jaded, and to carp at children, who grow up in consequence with a gloomy shadow in their hearts that ought never to have been there. A little more relaxation, especially relaxation of the right sort, would make us all happier, and would fill thousands of households with sunshine, where now the domestic atmosphere is grey and choking as a wet November day.

Give us more sunshine! Or rather let us all seek sunshine. As men walk out into the fields to pluck spring-flowers, and drink in the blessed sunshine of this vernal season, so we should not wait for moral sunshine to come to us, for that will never be, but go forth in search of it where we know it may be found. It is only by observing the laws of our organization that we can hope to enjoy this moral sunshine. Neglect those laws, ignore the necessity of occasional relaxation, and farewell to this joy-loving sunshine!—[Baltimore Sun.

IRISH BULLS.—A Dublin student, being asked what was meant by "posthumous works," answered, "such works as a man writes after he is dead."

An Irish lieutenant, stationed abroad, being informed by letter that his widowed mother had married a second time, expressed his alarm about his rights of primogenitureship by hoping "that she wouldn't have a son older than himself."

But the best bull we ever heard of was shown in Paddy's description of the animal of that name. "This is the way you may know him: When you see a group of cows lying down in the field and one of 'em is a standin', that's a bull!

IN Winchester Centre, Conn., there has not been a death in one and a half years. The village is surrounded by 150 smoking coal pits, and besides, *there is no physician in the place.*

What wig cannot a barber make? Ans. Earwig.

v6-1 Proprietor.

Hayward's Hotel,
Five Miles from San Leandro, near the Castro Ranch.
THE Proprietor of the above Hotel takes pleasure in calling the attention of his patrons to his house at the present time. Having taken some pains to newly finish and furnish his house and prepare it for the traveling public, he feels confident he can offer a pleasant and comfortable "home" for the traveler, or for any one that wishes to spend the summer season in one of the finest valleys of the State.
The location is one of the most healthy and delightful spots in Alameda county. Situated upon a commanding eminence, it presents a magnificent view of one of the most beautiful and highly cultivated valleys of California, and opens the prospect to the bay and harbor of San Francisco, and the country around for many leagues.
The Proprietor has spared no pains or expense to fit and furnish his rooms in a style having reference to neatness and cleanliness and comfort. These he feels confident will be approved; and every effort will be made to have the table and and every other department subserve the pleasure of his patrons.
A good Stable is attached to the house. Horses in saddle or harness can be furnished for the pleasantest road scenes in the country—the Springs, the Mission Gardens, the Fishing Grounds, and other places, furnishing abundant sources of amusement for the benefit of invalids or persons desiring recreation and pleasure.
☞ The patronage of the public is solicited. v7-18 3m

Estudillo House,
SAN LEANDRO, Alameda County.
THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.
To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.
San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable piece of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.
The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

The California Farmer.

SAN FRANCISCO, FRIDAY, MAY 22, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Hallon Fourth street, between J and K, City of Sacramento, where all are invited, free.

Letters and Exchanges.

Our correspondents are kindly requested to direct all letters to us at our principal office, San Francisco.

Those journals and periodicals with whom we exchange will much oblige us if they will be particular to note this, so that we may be in receipt of their favors at the earliest date. Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco.

State Agricultural Society.

We would call the special attention of all the friends of Agriculture, of Manufactures, of Mechanic Arts, and of all departments of human industry, to the large and varied list of Premiums offered by the State Society the present year, amounting to the splendid sum of $6000. We believe this is the largest amount offered by any one State Society (except the U. S. Society) in the whole country. The list will be found to embrace almost every kind of industry yet pursued, and some branches quite new in this country.

We find in traveling over the State a laudable interest felt in the success of the present year's Fair. We can assure all who wish well to this plan of developing the vast resources of our State, that the whole Board of the Executive Committee are active and very intelligent gentlemen, and a Board that will see that every arrangement will be carried out with an eye single to the public good.

Having spent some time in Stockton in learning the sentiment of the citizens, we can happily repeat what we said in our last issue—that the entire population are in earnest in the work, and all the citizens are ready to do all in their power, personally and collectively, to make the Exhibition one of the most interesting ever yet held.

The City Hall which has been tendered by the city, for the place of Exhibition, is large and spacious; the grounds around will be put in handsome order, and the plan in the city will be carried out in good style. The Cattle Show, the Equestrian Races, the trial of speed of Horses and Carriages, and all the other out-door play, take place at the Race Track, a little distance from the city, in a pleasant, cool and appropriate spot. The Executive Committee will be well sustained by the city authorities, and the county authorities also.

The ladies of the city are active in their plans. Works of art and taste, the useful as well as the ornamental, will come within their especial province, and it is not too much to say that the ladies of Stockton will not be behind those of any other city in the evidences of their skill, ingenuity and taste. We believe, also, by the suggestions which we hear, that there will be seen, at the coming State Fair, satisfactory evidences that every branch of Domestic Industry, so far as the domestic department of home is concerned, will be fully represented and well maintained.

We learn also, with much pleasure, that the ladies of Stockton will take in charge the especial duty of arranging for the social entertainments during the Fair week. With these able and faithful auxiliaries to the great enterprises of the Fair, there can be no doubt of its complete success. We are very happy to know that the merchants and traders, hotel keepers, and business men of every class, feel the great importance of this enterprise, and are determined that it shall be nobly sustained; and they feel that the credit of the city is at stake for its complete success.

We cannot omit to state here what we believe of fundamental importance—that is, that the citizens of the city and county should come forward voluntarily and promptly, and enrol themselves as members of the State Society. Every citizen can at once see the influence such a step would have, to encourage the Executive Committee in their plans for the furtherance of the object. The small sum of ten dollars gives to a member the privilege of admission to all the Exhibitions of the Society for himself and family, besides giving him a voice in the management of the Society. In addition to all this it gives success and stability to the Society, and success to the present Fair, which would doubly return cost of membership to any business man of Stockton. If the citizens of that county should come forward at once and without delay and enrol their names as members a great many plans and designs could be more completely and perfectly carried out, and with greater success than by delaying action till a late day. Our many years' familiarity with such enterprises induces us to urge upon the citizens of that county, especially, such a course of action.

It is to be hoped that grain growers, and all cultivators will prepare and preserve their best and choicest grains for the State Fair, and that they will prepare handsome sheaves of the various kinds of grain to ornament the rooms of the Exhibition Hall.

The importance of the present State Fair should be felt in every county in our State, and it is to be hoped that wherever there is a County Society, special committees from those Societies will be chosen, whose duty it shall be to attend and take observations, join in all the plans for the free interchange of knowledge and information upon the subject; and where there are no organizations in the counties, then a special delegation of the citizens for the same purpose.

Most undoubtedly, courteous invitations will be issued to all scientific and literary bodies to unite in the Exhibition and the festive scene consequent upon the occasion.

With this appeal and these suggestions, and a fervent hope that no good citizen will permit the subject to drop, but will keep it alive in his own memory, and awaken all he can to the same subject, we leave the matter in the hands of the people.

The Great Mechanics' Fair.

This great Industrial Exhibition of the Mechanics and Manufacturers of our State takes place on the 8th of September, to last *ten days*. This will be a grand affair, no doubt, if the Mechanics will only work together. "In union there is strength," and we trust such will be the motto of the members of this noble Institution, for a great responsibility rests upon them, and we trust they will realize how great that responsibility is.

Every State in the Union and every nation of Europe have representatives of that interest here, and between the workingmen of other States and other countries there now exists a rivalry to know who shall excel, and who shall supply this State with the products of their labor. It is not now the question of who *should* supply California, but who *will* do it? The present strife for supremacy of the trade, is not in *right*, but in *might*; and the lever of power used is money, the money of a third power, the importer—but the Mechanics and Manufacturers of California should know that they hold a greater power in their own hands, one that can even overthrow that mighty king power, money. Even, 'tis that Almighty power, I will!—and so gloriously expressed by one of New England's most glorious poets:

> "A weapon that comes down as still
> As snowflakes fall upon the sod,
> But executes a Freeman's will
> As lightning executes the will of God!"

And if the Mechanics of California would but feel the importance of right action now, if they but unite and say, "we will;" if they will give all their united influence to the coming Exhibition of their skill, genius and taste, we shall see here on this Pacific Coast, such evidences of workingmen as the people of this State but little dream of. Such an Exhibition would do more to stop orders going abroad for their work, than any effort that could possibly be made; and the amount of gold saved to the State would count in millions the coming year. To accomplish this, there must be a union of action; the Mechanics of the country must unite with the Mechanics of this city, and their plans and labors must all tend to one object, the prompt protection of *Home Industry*.

Unless home industry can be more appreciative and better encouraged, unless we can have a better public opinion upon this subject, our State will not advance, the amount of gold sent abroad for articles that we can produce and manufacture here, even better and cheaper than in any other part of the world, is enormous; and it is only for a want of knowledge by the masses, that this is so, that we continue to be depleted of our precious metals.

A Public Exhibition of the Mechanical Industry of the State will show what can be done, and the *responsibility* of making this known depends now upon the Directors of the Mechanics' Institute of San Francisco especially, as they have announced their plans. Three months only now remain for them to complete their plans for this great work, and a herculean task is before them. If they fail of accomplishing their work, what a responsibility? If they succeed, how glorious a triumph! All future generations will applaud their noble efforts, made to elevate Mechanical Science, and to give to the laborer a just appreciation and reward.

We hope these remarks will be appreciated, for we receive letters every day making inquiries of us to know if the Mechanics' Fair is *a reality!* Some doubt; some hesitate; some have no faith in the people sustaining the labor of their own Mechanics. With the Managers of this Fair lies the power of removing every doubt, and doing so at once.

Their plans should be spread broadcast before the people—they should be scattered on the wings of the wind;—their plans should be "kept before the people," till the people see they are in earnest. Their efforts, their united efforts, should be like the watchfires upon a thousand hills, to tell the people they were at their posts, and they should give the world assurance that the Mechanics of California had uttered in thundering tones, the words, *we will encourage and protect our own labor*. When the people see the evidences of such efforts, success is certain.

Chinese Sugar Cane.

This important product can be planted successfully until the middle of June, as an article of food for swine; and we do not believe there is a crop that can be found more profitable for stock, than this very plant. It is the most nutritious of all green fodder, containing a large amount of saccharine matter. We hope it will be very generally tried—it yields a very large crop, as it grows as easily as broomcorn, and resembles it in appearance, only much stouter.

Rare Favors.—A handsome specimen of the Charter Oak was kindly sent us, the present week, by Mr. Robbins, together with a collection of very large sized hickory nuts, being nearly twice as large as the common hickory nuts. Mr. Robbins obtained these specimens while on a recent visit to his Connecticut home, and was fortunate in securing a specimen of the Charter Oak, as it had nearly all been disposed of. He thinks there is but one tree in Connecticut that produces these large hickory nuts.

A copy of the "California Register" was sent us, with compliments of the publishers. A glance only have we had, but we feel that even a glance reveals enough to show it a most valuable book. Our thanks are due to the publishers. We shall examine it, and speak of it further.

"Better Times Coming."

The annexed is but a sample of hundreds of letters that we have received from various quarters, upon the subject of last year's State Fair, and although it may seem a *curious* letter to some persons, it is nevertheless a true letter, and the reason of our publishing it is to remove the cause of complaint the present year.

One great cause of all the trouble last year, was the want of preparation in regard to the committees; these could have been appointed, and should have been, two or three months before the Fair, and we know lists of names were transmitted for that purpose, of able and well qualified men for the various committees. But this duty was deferred till the morning of the Fair, and then, in all the hurry and bustle of congregated thousands, committees were picked up as best they could. This was a source of universal complaint, and the parent cause of much else that was unpleasant and unsatisfactory; but this will be *remedied this year*, we know.

Our correspondent has good cause of complaint, although the competitors named, Messrs. G. & B., who took the premium, were not to blame at all, and were deserving of high praise for their excellent products. We trust that everybody will forget "by-gones." *We* know parties that suffered and were unjustly treated, but the right will always triumph, and our friend must not hold back, but come with his machines, *taters*, and all, and we will all have a good time. The Executive Committee are at work earnestly and faithfully, good committees will be formed in season and their names announced, and the co-operation of all good men is earnestly solicited. We hope no one will hold back for the errors of the past. 'Tis better to forgive and forget, and thus good men will strive; for they that "persevere to the end, shall reap if they faint not."

The following is the letter referred to above:

Washington, Alameda county, May 6, 1857.

Editors Farmer: I have two or three times called at your office in San Francisco, not only to get Agricultural Reports and papers to send to my friends in Michigan, but to have a little chat with you about my grievances with regard to the manner some things were done at the State Fair last fall, and to inquire if there can't be an improvement at the next Fair? If not, there is very little use for small farmers like myself to think of competing with gardeners, or such as can see the end from the beginning.

My grievance is this: about ten days previous to the Fair, I commenced digging some potatoes for market, and finding them turning out so well, I concluded to measure off one acre, and give in the yield, and the manner of cultivation, at the Fair; not for a premium, for that I did not expect, but to see how near I could get to it (for I presume there were men who took extra pains with their vegetables, expressly for exhibition). So I picked out from amongst the handsomest, thirty-six, to take to the Fair, and they filled a one-and a-half-bushel basket a little rounding. The yield of the acre I gave in writing, as also a description of the soil and manner of cultivation. The weight I forget, but I had 153 sacks of assorted potatoes, and 67 sacks of medium and small. Well, when I got to the Fair I took my basket into the hall, and naturally looked round to see if I could discover any potatoes that were nicer than mine. I found *none* that could begin with them, and felt a little elated, for this was the second day, and the last brought in. I invited a number of my friends and neighbors to look at them; also, the President of the Society, and Col. Warren. All gave it as their opinion that my potatoes would take the premium. But by some *hocus pocus*, the committee on vegetables found some somewhere better than mine, and of course a larger yield to the acre, as Messrs. Guild & Brown took both premiums. By the by, gentlemen, was it the biggest potatoes, or some other size, that was to be considered the best? for it is not always the biggest that are the best for cooking. But enough of that.

Now the question is, how many sacks or pounds of potatoes did Messrs. Guild & Brown have off this acre that took the premium? There is nothing of it in the report by the committee, only simply Guild & Brown took the premium for the best acre, and the best bushel; and the rest of us are all left in the dark as to how *near* we came to getting a premium. Now this don't pay, carrying stuff up to the Fair, without having some satisfaction as to how much, &c.; the public demand or would like to know that much. I did very well with mine, however; the landlord of the hotel where myself and family stopped, gave me give six dollars for the basket full.

Now, gentlemen, it is not the premium, but the honor of having the best that we contend for; and if we have not got the best, we would like to know how near we come to getting that honor; then we can judge a little by our next crop whether it will do to try it again at the next Fair.

I intend going to the city to-morrow, and shall call at your office, and if I find you have come up missing as usual, will leave this scribbling for you to look at, at your leisure.

My Broadcast Sowing Machine, the model of which I exhibited at the Fair last fall, works well. I sowed my wheat, forty acres, with it. I think Mr. Holmes, of Alvarado, will take it to the Fair next fall. * * * Yours, A. C.

Note by Editor.—We regret we cannot always meet our friends at office, but we have not yet learned the power of being over the State and at office at the same time.

Exports.—Fifty thousand bags of Barley have been shipped to Liverpool, recently, from San Francisco. A portion of this amount, however, is now being made up for the clipper ship Hurricane, loading at the wharf.

Crops, Farming in Stanislaus, etc.

Horr's Ranch, Stanislaus county, May 13, 1857.

Editors Farmer: I now sit me down to write to you a few lines, and let you know what the prospects of the farmers are in this part of the State. On the last of February we had a heavy fall of rain, and one light shower the last of March; but none in the month of April. The first of April was quite warm, thermometer at 90 and 95 degrees. The great drought and excessive heat were very detrimental to crops. Previous to this the crops were more promising than for several years past. I have been in the counties of Merced, Mariposa, Tuolumne, and San Joaquin, and find the crops light; yet after all we have many things to encourage us. For the last three or four weeks the weather has been cool; almost every night a slight dew has seemed to moisten vegetation, and from all appearances there will be no famine for a while. The barley crop is short; perhaps not more than half a crop. Wheat is also light up this way; not much planted in this county this season—not to exceed four or five hundred acres; quite a large amount of barley was planted; hay crop light.

Within a few weeks past I have visited several of the mining towns in Mariposa and Tuolumne counties, and there seems to be many valuable improvements making in the way of mills, fire-proof buildings, and the rearing of orchards. Already in the towns of Sonora, Columbia and Shaw's Flat, many thousand trees have been planted; and many thousand more will be planted the coming fall and winter. The trees now growing are heavily laden with fruit. I have no doubt but there will be ten times as much fruit in the mountains this season as on any previous year; thousands of bushels will be grown this year. In these mountain regions fruit grows luxuriantly.

The potato crop up in these regions is large, and better potatoes I have not seen in any State east of the Sierras. On the whole the people are beginning to wake up to their interests; the farmers are beginning to learn that it will not do to plant too late in the season, at least on lands that are not more than half plowed and without a good fence. Many of the farmers in previous years have had poor, or worse than poor fences; and at this late day and age of improvement, some have a dog or wath fences,—no fences at all. The day is not far off when these idlers will die out, or starve out, and may God speed the time. This dry season makes the farmers begin to think of deep plowing. For one I am satisfied that one acre subsoiled is worth more than two plowed in the usual way, and I am more than ever convinced of the absolute necessity of early planting. I am also satisfied that farming will pay, if well done. Poor fences, poor farming, and poor hotels, all go hand in hand. And here let me say to you, if you ever come up in this part of the country, and should call at Osborn's Hotel (formerly known as Dickinson's Ranch), you will find a house of the first stamp. Mr. and Mrs. Osborn are the proper persons to keep a hotel; they have lately purchased this stand from Mr. Dickinson, and are doing an honor to public-house keeping.

Colonel, can't you take a trip up here and see how things look? If you do, you will see that the people are making a noble effort to do their part at the State Fair, which is to come off in Stockton next September. I. D. Morley.

An Important Observer.

The following valuable letter will be perused with interest. Every suggestion of "Observer" is worthy of note. We have ever urged that subsoiling and rotation of crops will naturally neutralize the evil effects of the alkali, and most assuredly our farmers must have observed long before this the constant evil results from planting the same ground with the same crops, and from the same seed in several successive years.

The suggestions of Observer, in relation to the Peach blight, is worthy of notice, although we can point out several orchards where there has never been a drop of water supplied. We hope all cultivators will communicate with us freely.

—

Alkaline Soils.

Editors Farmer: Inquiries have been made of the writer as to the composition of these soils, the best method of cultivation, and the crops most suitable to their nature. These questions were fully discussed in an able article which appeared some months ago in the Farmer—[Essay on the Alkaline Soils of California, by Wm. Thompson Vol. VI., No. 24.] We will make a few suggestions for the benefit of inquirers, and for the purpose of eliciting more attention to the subject.

Undue quantities of soda, potash and other salts, formed by the chemical changes continually taking place in our mountains, are annually poured forth by numberless streams and deposited from time to time in our valleys, thus producing an excess of the alkaline ingredient. In addition to this, it is probable that the decay and ashes of the sea-weed, and the vapor impregnated with saline properties, wafted from the bay and ocean often far inland, and then distilled in the form of dew, may produce similar effects. If such be the case, the causes are ever operating, and must continue to recur, and it becomes a matter of importance, if these lands are ever reclaimed, to search for a remedy and apply it without delay.

It must be evident that if we can in any way carry off or neutralize this alkali, to a given extent, the whole object will be accomplished. To effect these ends, a system of subsoiling and underdraining should be thoroughly tried; and also an application of such manures as contain as little as possible of the ashes, salts and other ingredients similar to the constituent elements of these soils. As a cheap remedy, and one accessible to all, though not free from objections, we recommend barnyard manure, until something better be suggested.

As to the crops best adapted to these soils, it must be clear to every reflecting man, that *those only* should be planted, which require the greatest share of the alkalies to bring them to perfection.

Therefore, if our deductions are correct, a trial might be made of the following products in something like the order in which they are presented: white clover, tobacco, potatoes, asparagus, beans, turnips and similar vegetables. If the experiment should be successful these could then be followed by any of the small grains. Everything that has grown upon the ground should be removed, and nothing should be burned upon it, as it already contains too much of the ash ingredient. To prevent the poisonous effects of the alkali, which is always worse in a dry season, irrigation is necessary. Care, however, should be taken to attend to this in the evening, as plants are often injured or totally ruined by irrigating them during the heat of the day. May not the peach blight be accounted for, to some extent, from this cause, and from the alkali in the soil? If, then, farmers will make experiments and publish results, and no good be accomplished, we are no Observer.

The Picnic on May-Day.

La Grange, May 3, 1857.

What recollections and associations are brought to mind by the bare mention of the Picnic. I never hear it without going back in dreams to the dear old home of my childhood, and visiting the old familiar scenes, where, meeting on May-Day in some green-wood shade, by the side of some stream, we celebrated with all the fervor of our young hearts the return of lovely May. And why should we not: after old winter's reign has been broken by the returning sun. March, with his mud, sleet, rain and wind, has retired; and coquettish April, with her smiles and tears, has given way to May in all her loveliness. 'Twas then we went forth in all the joyousness of our hearts, among the hills, and under the old oak trees, singing:

> Come away: with me to the hills,
> And swiftly shall glide the hours,
> As we stroll by the laughing rills,
> And cull the sweet wild flowers.
> The birds are singing so sweet,
> The flowers are blooming so gay;
> Our hearts with rapture will beat—
> O come to the hills away.
>
> O come to the hills with me, my love;
> A velvety carpet is spread,
> Brighter than Persia's looms e'er wove,
> Fairer than Queen's ever tread.
> The earth all spankled with flowers,
> The trees arrayed in full green;
> Fair nature's loveliest bowers,
> Alone in the hills are seen.
>
> Come away to the hills with me,
> And breathe the health-giving breeze
> As it floats o'er the hills so free,
> And plays with the old oak trees.
> Let it kiss thy brow so fair,
> And give to thy cheek a glow;
> Let it play with thy glossy hair,
> As over the hills we go.

And we have been trying it here in our new homes in the Golden State. And what if the "laughing rills" have taken it upon themselves to literally "dry up," have we not the Tuolumne, now a miniature Mississippi, rolling its muddy tide in turbid grandeur through our beautiful country. The old oak trees are here, the gay wild flowers, and bright-plumaged, sweet-singing birds. And so we meet: the old and young, the rich and poor, the grave and the gay; from the north and south, from the east and west. All joining in one happy throng to welcome beautiful May.

Everything was laid under contribution, from an ox to a kid; from the choicest wines to buttermilk—never forgetting the "beverage prepared by God himself"—and from the finest cake to good old home-made bread. And didn't we enjoy it? Whether by eating, drinking, singing, dancing, swinging, rowing, or what not: each came to find pleasure, and found the cup full to overflowing.

In the evening we adjourned to the La Grange, where a room had been prepared free by the excellent host, for the purpose of allowing all who might wish to "trip the light fantastic toe," to have a chance. Many availed themselves of the opportunity, and kept it up till the "wee sma' hours" gave warning 'twas time to retire. We did so better pleased with ourselves, with our neighbors; and at our lot being cast among those who could and would contribute to the pleasure and happiness of those about them.

Hoping these re-unions may become more frequent, and be a means of wearing away that degree of selfishness that has been such a great fault in the composition of society in this State, I close an epistle already too long.

Yours, for our rural pleasures,
Ben Bolt.

—

We love to hear from Ben Bolt. Yes, and every other true heart that can come to our columns and speak in the language of a free spirit, we bid welcome and God speed. We like to hear from all who can talk to us like Ben Bolt—in prose or in poetry, and without the fear of Mrs. Grundy before their eyes. Oh, freedom! give us thy spirit, and infuse into us a higher love of rural pleasures and scenes of happiness that ever cluster around our homes and scenes where flowers, children, sunshine, joy and contentment are made perennial. Let us hear from you often, Ben Bolt. There must be plenty more music where this strain was found.

Music.—We have to acknowledge the receipt of a copy of a very beautiful piece of music, entitled "My Home is in the Western Clime." The ballad is written and composed by R. R. Nicholls, and dedicated to J. Silversmith. It is a very beautiful song.

[For the California Farmer.]

To Agricola.

New York, April 20, 1857.

Yes, dear Agricola, who should wonder that after long years of separation from a loved family, I should "bound away on the briny sea" to mingle once more in the heart-scenes of the domestic circle? What place on earth so hallowed, so beautiful as home! How the whole soul leaps at the magic word. Around that hallowed spot cluster our best and holiest affections. It is the centre and fountain of the choicest pleasures, and the highest enjoyment known to man. Storms may lower without; a cold and heartless world may sneer, and frown; but all can never poison the heart, or disturb the placid serenity of man's paradise here below. Years of wandering prepare one to appreciate and relish more keenly the home blessings. Far more precious than California's richest ore, or her most brilliant gems, are the affections that bind the heart to its home. If that heart be true, wealth cannot lure it away, time cannot wean, or distance alienate it, to worship at another shrine. In prosperity it buoys up and enlivens the soul; in adversity it sustains and strengthens the heart. In health it is the chosen spot of every pure spirit; in sickness the vestibule connecting the outer world with the home of angels and the spirits of just men made perfect before God's throne. What would the world be without its homes? Where would man find a resting place? Around what other spot could human sympathies and affections twine? The "poor Indian" who roams over the northern and western portions of our country, has his wigwam to shelter his "mohala" and "picaninnies" from the rude blast, where they may learn from the lips of the sire, of the deeds and prowess of the tribe, of the heroism of their braves, the number of scalps taken in the battle's rage. Even the wild beast has his lair; the eagle builds his home among the inaccessible mountain cliffs; the humming-bird swings his tiny nest from the waving bough; the busy bee rears its roomy palace where beast nor bird can invade its home circle, nor infringe upon its domestic arrangements, nor clutch its hoarded riches. Then who can or who would wonder that man, endowed with social affections and heaven-born intelligence, should most highly prize a home with all its rich treasures, its pure affections and its hallowed joys.

But these joys, pure and elevated as they are, are often linked with many bitter sorrows that wring the heart, and that all the elevated pleasures of the home circle cannot assuage, though they can alleviate, and throw a gleam of sunshine around the smitten heart, and bring out the bow of promise from the lowering sky. My own experience since my arrival at home has taught this sad lesson to my aching heart. The morning papers of the 7th of February had the following: Died, on the 5th inst., at the residence of her father, in this city, Helen Elizabeth, youngest daughter of the Rev. Joshua and Susan U. Butts, aged 20 months and three days. Thus much appeared upon the public page of the daily journals, and was read, it may be, by thousands, and soon forgotten by most who read it. But the home thus suddenly desolated, the living circle broken, never to be united again in this world, was truly filled with gloom. The bitter sorrows that gushed forth like a desolating flood, fell with crushing power upon all our hearts, so recently re-united. She it was of whom I wrote, that "though she had never seen the form of her father, yet when she laid her little head upon her pillow at night, she fell asleep with the words, 'God bless my dear papa,' lingering upon her rosy lips." Oh, my dear friend, little did I think, when I wrote those words, that just twenty-three days after I first kissed those lips, they would be sealed in death. All our memoirs of her are sweet and precious. We believe she now wears a starry crown in her eternal home. Sympathizing friends crowded around us; sorrowing relations came to offer their condolence; but how vain the help of man to relieve such sorrow. In the midst of terrible storm we bore her precious remains to Greenwood Cemetery, that great city of the dead, and laid them in the tomb. At another time I may give you a description of this silent city, through the columns of the Farmer.

But I have no right to intrude my private sorrows upon you or the public, any further than was necessary to illustrate the shady as well as the bright side of a true home, for every one of my readers has, at some period of life, lost a relative or friend. All have had hours or months of sorrow, and all have dwelt at home, and felt the shearing, refining, elevating and purifying influences that breathe around the domestic fireside: that are alike the pride and honor of our nature.

Experience, I doubt not, has taught you that "there is no place like home," no joys like home joys, and that, whether you dwell among Scotia's highland cliffs, or California's brilliant sky, if your loved ones are there, no place on earth is so dear; unattractive as it may be to others, homely or unadorned, to you it is more precious than baronial halls, or the gorgeous palaces of royalty. There, if no where else in the wide world, falls a continued shower of sunshine, bathing all its inmates with its refreshing power.

Let all, then, strive to make home happy, and seek a home where the flower of youth never fades, and perennial joys grow brighter and wider and more pure forever.

Yours, &c. B.

Guano.—In our harbor, as the boats pass to and from Sacramento, there can be seen large piles of bags of superior Guano upon one of the rocks in the bay, and of superior quality.

The navigation of the Feather river from Marysville to Oroville, is abandoned for the present, in consequence of the low stage of water.

The New Brick Machine.

This new and wonderful invention, of which so much has been said, has been in operation some time, at the old Bonded Warehouse, on Market street, and has been examined by many thousands of our best brickmakers and house-builders. The invention is a singular one, and the style of brick unique, being hollow or fluted; thus made and in finished style, they are excellent for middle walls (or partition wall of buildings), as they have the effect of deadening sound, and will save the cost of lathing and plastering, as they make a finished wall of themselves.

The machine also makes water pipes of a superior kind, and of all sizes, making them in the most rapid and perfect manner; the pipes are round, and made in any length required. The same machine prepares the clay in the most perfect manner, and finishes its work completely, receiving the clay and giving out bricks or piping.

The machine is a French invention, and was purchased by Samuel Brannan, Esq., when he was in Europe, and was introduced into California for the benefit of the State. With this powerful machine in the heands of good workmen, more brick and pipe can be made in one day than by any other now in use. Mr. Brannan has done the State great service by using his wealth in such a manner as to apply it to the benefit of the industry of our people. We understand that the whole apparatus is for sale by Mr. Brannan, whose object is solely to introduce it to the workmen of California.

Madame Lesdernier's Complimentary Benefit.

The many warm friends of this most estimable and highly talented lady are desirous of giving her a Complimentary Benefit before she leaves for Australia. The first Monday in June has been suggested. It is to be hoped that this lady will be then justly noticed, for rarely is it the privilege of our citizens to receive so rich a return for performing a good deed as could be secured by giving a Benefit to the lady and enjoying her readings.

The Comet.—The lecture given at Musical Hall on Wednesday evening, by Mr. Minns, was well attended and by an appreciative audience. It was an able and interesting lecture. We regret we could not give a synopsis of it. It would be interesting; at all events we feel certain it will do good, for it will turn the attention of many to the truths of Astronomy, and show to those of nervous and excitable temperaments that we have nothing to fear from the comet. We shall hope to speak of the subject in an enlarged manner soon.

While so many are complaining that there is no occupation to be had, we would call the attention of those wishing for work to the advertisement in our columns, for men for the mills at Mendocino. These mills give constant employment to a large number of men; the wages are paid every month, and the location being immediately on the sea coast, the climate is cool and healthy. To any person wishing steady work there can be no better place than Mendocino.

☞ We notice that by the falling of the waters of the Sacramento the steamers land their passengers and freight below Marysville. There they have established a new town, and it bears the singular cognomen of "Leton," and that is now the head of navigation, and, of course, the furor of speculation. We only hope they will not *let on* too fast, but remember *Vernon*, Eliza and Plumas.

☞ Reynolds & Law, are largely engaged in butter, cheese, hams, lard, and other valuable necessaries and luxuries for families, at their new location, 134 Washington street. This firm are worthy the attention of all.

Groceries.—Bradshaw is opening his new stock of Groceries in his new Store, corner of Samsome and California streets. Every family should visit Bradshaw.

The Marysville Express publishes Judge Barbour's opinion in refusing the application of Jane Pursley to be divorced from her husband on the score of cruelty. Such a step ought to be general.

Books from the East.—We received a case of books from the publishers at the East, of which we shall speak in detail in our next issue.

The newly discovered quartz ledge at Cherokee Ravine, Butte county, is destined to prove very rich.

We crave indulgence for much left out to make room for Premium List of State Society.

A new saw-mill is being erected on Durgan Flat, near Downieville.

Indigestion, Liver Complaints and their Cure.—Holloway's Pills quickly remove obnoxious matter from the blood, and thoroughly cleanse and renovate the system. These Pills are a certain remedy for diseases of the Stomach and Bowels.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

40 or 50 Lumbermen Wanted
AT THE MENDOCINO SAW MILLS.

WAGES:

For Good Ordinary CROSS-CUT SAWYERS AND CHOPPERS, $40 to $50 per Month, and found. *Extra men can have Extra Wages.*
MILLMEN, from $45 to $60, and found.

☞ **WISTAR'S BALSAM OF WILD CHERRY,**
The great remedy for CONSUMPTION and all other diseases of the Pulmonary Organs.

The greater the value of any discovery the higher it is held in the esteem of the public, and so much in proportion is that public liable to be imposed upon by the spurious imitations of ignorant, designing and dishonest men.
Now that this preparation is well known to be a more certain cure for incipient CONSUMPTION, ASTHMA, LIVER COMPLAINT, COUGHS, BRONCHITIS, and all similar affections, than any other remedy known, there are found those so villainously wicked as to concoct a spurious, and perhaps a poisonous mixture, and try to palm it off as the genuine Balsam.
This is to caution dealers and the public generally, against purchasing any other than that having the written signature of I. BUTTS *on the outside wrapper.*

Prepared only by Seth W. Fowle & Co., Boston, Mass., to whom all orders should be addressed, and for sale by their agents.
Agents—C. Morrill, cor. Third and K, sts., Sacramento; H. Johnson & Co., Washington st., San Francisco. 15-1m

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.
If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.
A note addressed to "MELODIA," care of the Editor of the Farmer, will receive prompt attention. v7-9 tf

BOOKS FOR GARDENERS.

Just received, at the office of the Farmer, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

Benicia High School.

This Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by Cornelius J. Platt, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17th of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.
A daily account of recitations and deportment will be kept and sent monthly to parents.
The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS:

	PER MONTH
Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.
No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.
For further information or references, address the Principal.

Life Assurance.

IMPORTANT TO ALL. In a country so newly occupied—so sparsely populated as this good State of California—it may well be imagined that the subject of Life Assurance has been but little thought of—and the person who has the temerity to enter upon such an undertaking as the establishment of such a practice in so newly organized a state of society—must lay it to account—that he will meet with many rebuffs—with difficulties, indeed, of many and various kinds—but certain individuals are so constituted that, to them, difficulties past—opposition overcome, act but as incentive to more strenuous exertion—and will undertake labors, however unpromising of success—from a very love of usefulness or from early habits of thinking, or of association. Con amore!
The writer has experienced difficulties of no common kind in the course of his sojourn. He has been engaged in this very work of Life Assurance in a community prejudiced against and unfitted to receive or to appreciate such a principle—did he there fail? No! He enunciated the principle—he overcame the prejudice and established the practice, to the moral and social benefit of the community! And now, under the sincere conviction that *Life Assurance* is *practical benevolence*, he takes leave to give a brief outline of its principles, and to recommend its adoption in this community.
The principle on which *all* Insurance is based, is that whatever *has* occurred, may be expected to recur—that there is, indeed, no such thing as *chance*; but that all circumstances, however apparently irregular when viewed in small numbers, are absolutely regular, when contemplated upon a sufficiently extended scale.
When regularity in the occurrence of changes points to a law in matters of a physical character, such events are said to be obedient to a law of nature, or more commonly a natural law. According to the Carlisle Tables, out of ten thousand persons of the age of fifty-two, one hundred and fifty-two will die within one year from the date of observation. Again, out of 100,000 persons born at any particular time, a certain number will die in each year—that is, the total will be reduced in an increasing but regular proportion, till the last expires. These things occur constantly. With reference to the whole population of London, the same number of persons die of consumption in that city in each year, and in every other vital contingency are found the same marks of regularity. Hence we may fairly infer that death, however *uncertain* with regard to an individual, is perfectly *regular* in its operation upon a large number. From what has been thus briefly stated, it will, we think, be clearly understood that the foundation of every species of insurance is the *law of average*, and that the object of the application of this knowledge, is to secure the benefit of the average to each individual! Life Assurance is the only *certain means* by which persons not possessed of accumulated capital, can secure their families from future want. It is a *moral* duty, because it is an obligation on every person to expose to as few risks as possible, the future interests of those with whom he has linked himself,—the highest *morals* is that which regards in the highest degree the future happiness of others. In doing our duty to others, we derive pleasure ourselves. Shakespeare says, "Happiness was born a twin"—and in that beautiful scene between the Queen and Jennie Deans, in the Heart of Mid Lothian, Sir Walter Scott—when the Queen, expressing surprise at the immense labor that has been undertaken by the girl, inquired why she should be expected to grant the pardon, makes Jennie thus eloquently and touchingly to reply: "Oh my leddy! when the hour o' trouble comes to mind and body, and the hour o' death comes, that comes to high and low, it is na' wha' an ha' done for ourse'e, but wha' and ha' done for *others*, that we think on maist pleasantly." It is a *religious* duty, for we are taught that "He that provideth not for his own, and especially for those of his own household, hath denied the faith and is worse than an infidel." Life Assurance is true charity. It is a *social* duty, because no person has a right to expect society to support those for whom he himself could by a little self-denial, have made a *certain* provision. It is a duty *universally practicable*, for the periodical payments are small as compared with the amount insured—and as *universally applicable*, inasmuch as it is almost impossible to suppose a case to which some of its adaptations do not apply. The man of moderate income finds in it the only certain means by which he can secure to his representatives the results of his natural economy. The *rich* man can find no better investment for his capital. The man who wishes to "make an appearance" can live up to his income without a reproachful conscience, after he has paid his premium for a suitable Life Assurance. Those who are *in health* ought to assure, for they know not what a day may bring forth, and their lives may be rendered uninsurable to-morrow by an attack of paralysis, fever, &c. Those who are in *delicate health* ought to insure (even though they pay an extra premium) because (supposing they have dependants) their minds will be more at ease, and they will thus secure a better chance of recovery.
Life Assurance promotes habits of economy, and it is a good plan for parents to commence insurances for their children, expecting them to continue it afterwards. Life assurance is an act of prudent forethought which earns the respect of the best of mankind, and *increases the credit* of the assured—to a tradesman, reputation is money.
Not only, however, is it available to the tradesman—it is equally so to the clerk of moderate salary—the mechanic—the artisan dependent on his monthly or weekly earnings.
The miner—who, in consequence of his somewhat risqueful occupation would pay a commensurately increased premium—however separated from the amenities of home and of society (for thus we judge our fellow men)—has a heart oftimes yearning towards his friends and relatives—his eyes are not unfrequently bedewed with tears of tenderness in the remembrance of by-gone associations—and possibly all for which he is toiling is intended for dear ones far away! but in a single moment he may be bereft of *life*. Upon whom then will his accumulations devolve? whereas holding a policy of assurance on his life, upon the required proof of his decease, the amount would be paid to those authorized to receive it.
To bring the duty home, we may refer to the City Surveyor's Report of San Francisco, for the last year, wherein it will be seen that some of its features are peculiar, and to be accounted for only by the very constitution of the community. 1,346 deaths are recorded as having taken place during the year. Of this number, between infancy and 20 years of age, over 620; between 20 and 30, 252; between 30 and 40, 240—1,112. Thus speaks a warning voice—do thou, our reader, heed it!
We close this appeal, leaving it upon the consciences of all to whom it may come.

Ladies' Department.

COME HOME.

[Could every home in our beautiful land have echoing around its entrance gate melody like the following, pale discontent would never enter its portals, and that sorrow, wreck and ruin which have destroyed so many hearts would never have found a lodgment there. The wreck of so many of the homes of our Golden State is the one great dark cloud that overshadows the land, and blessed the pen that points the way for its removal! and blessed the hearts that shall labor for its accomplishment!

We trust the exquisitely touching lines from "Florence Percy" will come like a spirit-voice to the heart of many a wife, and awake anew the song that may have been but temporarily silenced upon its post of duty, but shall now break forth in a newer and sweeter song.]

Return, for oh! thy wife doth pine
Thy stately form to see;
To know, to feel that thou art near,—
She pines to be with thee.
To feel thy arms entwine her form,
Her head upon thy breast,
'T would ease her aching heart to know
She ere would be so blest.

A lonely bark upon the waves,
With none its course to guide,
Through storms and billows dashing high,
It drifts upon the tide:
'T is thus am I, without thy hand
To lead and guide through life—
Then, oh! return, for thee I mourn;
Return unto thy wife.

Yes, come! there is a saddened tone
Breathed round me since ye went;
The evening winds seem wandering by,
With mournful tidings blent;
And tones of music seem more sad,
More sorrowing and deep;
And pining for thee thus, I turn
In agony and weep.

[For the California Farmer.]

Pleasant Reminiscences.

'Tis twilight's pensive hour; the holiest one of earth. The fading gleam of parting day always brings with it a somber gloom, that sweeps across the harp of thought like a sweet-scented zephyr, awakening all the pure slumbering music along the cloisters of the soul, gently touching the tender chords of memory, and the notes of love, joy, hope and melancholy are vibrating in the heart's deep recesses, imparting a holy influence to the weary mind after the toil of day is past. I have stolen away to my own quiet "sanctum," and for the want of something else to do, have opened my portfolio, and the first object that arrests the attention, is a half-written sketch of "Pleasant Reminiscences;" though "chalked out" long ago, I have not forgotten the happy associations clustering round this jumbled scroll of incidents connected with my visit to the fair City of the Plains.

Time has braided itself into weeks, and weeks twined themselves into months, since, on a very dark rainy morning in January, might have been seen two muddy looking females, closely vailed, and muffled from the inclemency of the season, entering the saloon of the steamer Cleopatra, with an anxious, eager-looking crowd, that went to make up the complement of passengers on her downward trip.

The boat has left the landing at Marysville, and its broad buckets are being dipped in the turbid waters of the "*Rio de la Plumas.*" So I might as well introduce you to my traveling companion, which proves to be no more nor less than the veritable "Elizabeth Ann Wiggins," a trim sister to "Betsy Jane Schudenshamer." Our floating palace is all in confusion, everything hurly-burly. Some are talking politics, as a great number of the assemblymen were aboard—those small fry statesmen, who like their eight dollars a day, besides the small loaves and little fishes. Others were preambulating up and down the narrow sides of the steamer, content in showing their gold-headed canes and pinchback jewelry; cabin-boys a swearing, loafers a drinking, and worse than all for the convenience of us ladies, a great majority were hiding themselves and obscuring the light of day by a dense cloud of tobacco smoke that went curling up through a host of mustaches and red looking noses; this is puffed right into your face, regardless of the studied rules of etiquette.

Accept of these nauseous fumes you must! whether Jew or Gentile, king or beggar. What a sketch for an artist's pencil is here found upon one of these river steamers. I shall never forget the expression of a middle-aged man that attracted my attention, who sat staring out upon vacancy with that dreadful look of calm despair. He was all alone in the gay crowd that surrounded him, thinking only of his heavy misfortunes in the mines, that eternally brooded round his strickened heart like the gloom of midnight. Like many others that come hither as gold-hunters, year after year glides through his open fingers, hourly widening the gulf that separates him from the loved ones at home. Go where they will, the heart's old blight, like the stalking scepter, haunts their waking hours of day, and the startling troubled dreams of night. The most distinguished "American savan" aboard was Gov. Johnson, which "Elizabeth Ann Wiggins" remarked was no different from any other man walking just behind his nose and following it about as he should do.

The boat landed in the afternoon, and I knew that we were in Sacramento, by its crowded avenues and busy thoroughfares. The passengers scattered here and there, each one pursuing his own favorite phantom, while I was left to pursue mine. In less time than it would take to preach a homepathic sermon, I and Elizabeth Ann found our way to H street, between Eighth and Ninth, where she introduced me to your gifted correspondent "Bessie," and "Katie King" (then on a visit to her). It would require the pencil of a Hogarth to do justice, in the description of Bessie and her little sanctum, and not the clumsy pen of mine. Why, there's a charm in the very name, that would make you love that consecrated spot from association. How many bright and beautiful thoughts that little room has given birth to! and out from the door's portal have floated many a bird's song, many a gem of rare beauty and genuine worth. He whole life (figuratively speaking) has run as smooth as a golden thread; while books, birds and flowers are her inseparable companions. Why marvel then, that "Bessie," the favored one, should write such strange and enchanting compositions? The poetry of her soul will not be shut up; its sweet warblings must go forth. The world's homage must be hers. Those holy breathings are felt far and near, and her genius must be acknowledged by every one that is cast beneath the resistless spell.

The reader will agree with me, when I say, she has borne off the palm, and stands in the first rank of eminent writers belonging to our Golden State, surpassing and outstripping the many on the road to Fame, both in poetry and prose. About everything she writes, we perceive this indescribable charm, that exercises such a good and salutary influence upon all that are blessed with her writings. It is in this irresistible effect that Bessie excels any female writers of California, and to this easily appreciable effect that her great *popularity* is owing. Nor is she more lovely and graceful herself than a lover of the graceful, true and beautiful, under whatever guise it is presented to her consideration. Her fugitive pieces of poetry are usually one wreath of violets, sweet-scented, modest and pure; so lovely that the hand that wove them should not neglect additionally to enrich, by turning her attention, love and kindness to things of larger beauty. We all know her power over the goose-quil, and hope some bright day that Bessie will favor us with a bound volume, as a testimonial of her remembrance to her many admirers.

The few tinges of sorrow with which her life has been shaded, have stirred the music in the depths of her *heart*, and imparted a melancholy charm to all her essays, whether in poetry or prose. In character, she is ardent, sensitive and loving; the very soul of truth and honor; a worshipper of innocence and godliness; with a heart so radically artless, as to lead you to believe her a school-girl of fifteen instead of a woman of thirty. She is slightly above the medium hight; rather light hair; dark hazel eyes, with that singular capacity of expression. The whole countenance is expressive of great genius and intellectual strength; her demeanor is dignified, graceful and noticeable for repose; her dress plain without ostentation or show; prefers the substance to the shadow, and goes much into literary society. Her very step has all the air of studied refinement and noble birth and bearing.

We have sketched the good "Bessie"* and her room, so we will pass on to thank Conductor Robinson for his kindness in giving "Katie King," "Bessie" and "Alice" a free pass in the cars to Folsom, the city in the hills that has sprung up as if by magic; for a year and a half ago the wild savage there held an undisputed sway. Its location is beautiful, the population is daily increasing, and it bids fair to be ere long a large and populous town. We took dinner at Oakwood Lodge, the home of Katie King, which made the place of interest me—though I pitied Katie as she rubbed her black eyes to keep them open, saying in the meantime—

How provoking it was for the cars to start for Sacramento so early, as she had never seen the sun rise before from his bright chambers in the East, since her sojourn in Eldorado; a sight that will gladly repay the slumberer for his trouble. Ye ladies of California, try it!

When the iron horse bore us away from Folsom, and Mount Diablo was lost to sight in the westward, I knew we would soon be back again to Bessie's room in the city. We were glad when night with his sable mantle began to steal along the brow of the mountain, for we were tired and satiated with the day's pleasures and excitements. And now in memory's studio I love to revel, and live over again that week of jollification, the most pleasant one recorded upon the pages of life. I can only tender my warmest regards in return for the many kindnesses proffered by numerous friends in the city, who made my stay a pleasant one. Will Col. Warren accept many thanks for those beautiful books presented me. Also, Mrs. C. A. Chamberlain, who gave me a copy of her Poems, which are attracting much attention. All those that wish for a real literary feast, should not fail to purchase this excellent book, which should be found on every center-table in California. I quote a short stanza of peculiar beauty, from the volume which the beautiful authoress gave me, so the reader may judge for himself. The following lines seem to have been dedicated to an absent and much beloved brother:

As the mystic shades of even
Close around the quiet earth,
Holy thoughts to me are given—
Thoughts that only then have birth.

But my vision does not falter,
Well I know that form of grace,
That too soon at hearth and altar
Left a void—a vacant place.

In a stranger land thou'rt lying,
Far, far from thy native home,
Far from hearts forever sighing
Come back, brother; come—come—home.

Few thy faults—remembered lightly,
For, like blossoms on the tree,
Veiling everything unsightly,
'Neath their bright-hued canopy.

What though of our love no token
Marks thine early place of rest,
Love, which never can be spoken,
Shrines thine image in each breast.

Dear me! The hand of my timepiece points to twelve, admonishing me to quit my scribbling, for the noon of night is past, and the small of the morning comes creeping on apace.

ALICE.

* All is said that could be said of her, only that she is no longer single "Bessie;" for just in spring-time she went away with the falling flowers of beauty and love—they do say that she caused the matrimonial noose to be thrown over Col. Welty's neck, on the 30th of April. So the Colonel may consider himself hitched to the connubial crib for life. We hope to hear from "Bessie," and that she will tell us all about that sad accident that happened to that lucky hombre the Colonel.

[For the California Farmer.]

A Word to Helen.

DEAR HELEN: It is not long since you and I were school-girls together—and do you remember how we chatted and talked, and told each other everything that we knew, and just what we thought first! Well then, allow me to say to you now, just what I think first.

I have just read your "Song to the Moon," and my first thought was, nobody sings to the moon but old maids and love-sick girls—(although I believe you are neither). But when I step out upon the dewy lawn, glistening in the moonlight, before my door, and sprinkled with flowers so bewitchingly beautiful, the soft evening breeze throwing my hair in disorder, and the bright moonbeams streaming through the trees, throwing trembling shadows at my feet—I wonder that everybody does not sing to the moon; and had I one note of song in my soul I believe I should be like the birds, that warble all day, and in the moonlight, forget that it is night, send forth a stray note upon the night air. How sweet the untimely note of a bird at midnight. To me it is like an act of kindness from an unknown hand, stealing upon me when least expected, sending a thrill of pleasure through the soul that makes you weep when you would not weep; make "smiles chase tears away," as the sun will disperse the pearly dew and chase the moon away.

But I have something more to tell you, and that is, I like "the author of ——, &c.;" not because he says "I like Adda," and speaks of "exceptions," and all these silly things, but because he is free to correct errors, and frank to acknowledge the truth (as I believe he does) when he says "there is a craving void kept aching in the breast." Now I never saw him, and don't know where he lives; but he reminds me of a bright star peering through a broken cloud, just to see what is going on in the world below—a light that will surely be seen when the floating mist is blown away. But if you get acquainted with him, do not tell him what I say, for the world.

Now Helen, would you like to know what I am doing? I am living on a Ranch, where the garden is in bloom, and the harvest is near,—where the harvestmen go forth to reap and to bind,—to gather (not the golden ore, but) a golden store of ripened grain. Think how they will droop like the withered plants in the scorching sun, as they return at the dinner hour. Then let me go to the dining-room and throw up the windows, drop the curtains to keep out the scorching sun; put the ice in the pitcher, and place fresh bouquets upon the table—for, who is more worthy a little attention or the comforts of life, than the toiling farmer?

Would you be happy? come live in the country, and rise in the morning at the dawn of day, and watch with me for the rising sun on a bright May morn; hear the first chirping of the little birds, then hear how their voices join in one grand concert, from the clear notes of the lark, to the wailing tones of the mourning dove. The balmy breath of morn comes dancing over the mountain top, sweeping down over the wide-spreading fields of yellow grain—bowing each golden crown, stirring the lofty oaks, sweeping their branches to and fro, and the little flowers dandle about like the dancing Daffodil. The orient sunbeams stream far up in the eastern sky, behind the long range of Sierras, bringing out most beautifully each point and scollop of their snow-crowned peaks for the artist's pencil. Then, oh! then, there is music, melody, and fragrance, wafted upon the breeze; the God of Day rides forth in all his pomp and pride, sending his rays so gently over the earth to shade in folds her lovely garb. Then as I inhale the sweet breath of morning, I sing—

How sweet to live in a country home,
In a California vale,—
O'er a carpet of flowers to roam,
The perfumed breath of morn to hail.

But as long letters are not at all genteel, I will close until I have something more to tell you.

ADDA.

THE MOTHER.—Despise not thy mother when she is old. Age may wear and waste a mother's beauty, strength, limbs, senses and estate; but her relation as mother is as the sun when it goes forth in its might, for it is always in the meridian, and knoweth no evening. The person may be gray-headed, but her motherly relation is ever in its flourish. It may be autumn, yea, winter, but with the mother, it is always spring. Alas, how little do we appreciate a mother's tenderness while living! How heedless are we in youth of all her anxieties and kindness! But, when she is dead and gone—when the cares and coldness of the world come withering to our heart—when we experience how hard it is to find true sympathy—how few love us for ourselves—how few will befriend us in misfortune—then it is that we think of the mother we have lost.

☞ A GIFT BOOK FOR ALL SEASONS. ☜

FLORA'S DICTIONARY.

BOOKS, &c.

The Fruit Garden.

By P. BARRY,

Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, THE VILLA, THE MANSION AND COTTAGE. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express*

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

For sale at 130 Washington street, San Francisco; and at the State Society's Rooms, Fourth street, between J and K, Sacramento. [v7-2] WARREN & CO.

MISCELLANEOUS.

PERSIAN SHERBET,

An Effervescing Temperance Beverage.

The most Wholesome, Refreshing and Invigorating Drink in the World!

THE powder from which this is prepared is made entirely from vegetable ingredients collected from all parts of the world, and combined together with great skill and care. Two tea-spoonsful put into a dry tumbler of large size, with a sufficient quantity of water added, produces immediately a cooling draught of charming excellence and flavor, and health-giving effect; it is adapted to all seasons and every one's use, and is especially suited for those who go to sea, as a preventive of sickness, costiveness, and the generally unpleasant state of the system arising from change of climate and living. It also lessens the dangers of incurring diseases under a tropical sun, and all who are about to take a trip to the Eastern States, if they regard health, ease and comfort on the way, should not fail to obtain a supply before starting, and more so, if ladies or children are with them; or invalids or the sick, as nothing is as grateful to the palate and stomach as this, and resists the enervating effects of hot countries so well; and, unlike ardent spirits, it does not enfeeble by inflaming, but strengthens and exhilirates both body and mind by its nutritious powers and the energy which it imparts to the digestive process: so, too, should seamen be provided with some before they leave the port—

"Those gallant men and glorious sons of toil,
Who brave the dangerous deep to guard their native soil,
And with daring hands the white wings of Commerce spread,
To bless the world and to earn their bread."

A glass taken at any time of the day removes all feelings of heat, thirst, or even hunger; and its being made in a great measure of vegetable acids tends, to prevent Scurvy and purifies the blood at the same time. It is also an invaluable Restorative for those who labor hard for a living, such as Farmers, Miners, Mechanics and Laborers, and to Storekeepers, Professional men and others, whose occupations compel them to lead sedentary lives, a draught before breakfast gives new spirit for the business of the day; and last, though not least, it is a boon to Woman, who is—

"The sweetest or sourest source of all our joy and woe,
That this world can give or life must know,
To those who are mothers, sisters, daughters, wives,
And would have pleasant homes and happy lives,
Should Sherbet keep,—the best thing made yet—
For with no widow's tears or orphan's cries is ever wet."

At home, in the house, for husbands, fathers, sons, brothers, beaux to use, and their own dear selves and darling little ones as well—medical men who know its composition speak in the highest terms of its utility, and all the poet's praise. Byron calls it the blest Sherbet, Moore make frequent mention of it, and Hafiz the great Persian bard says:

"Boy, let yon sparkling Sherbet flow,
And bid thy pensive heart be glad."

PREPARED BY

AUGUSTUS HOGG,

LONDON, NEW YORK AND SAN FRANCISCO.

Depot at the Davis Street Drug Store, near Jackson, San Francisco; and for sale by all respectable druggists and dealers, at 50 cents per Bottle—each one will make 12 glasses.

N. B.—Agents wanted and supplied on the most liberal and convenient terms. v7-17

SANDS' SARSAPARILLA,

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1856.

Messrs. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 1st of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were relieved, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,
CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

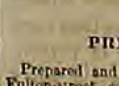
Messrs. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,
G. B. WILLIAMS, 262 BROADWAY.

PRICE, 25 CENTS PER JAR.

Prepared and sold by A. B. & D. SANDS, Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v7-10 3m

OY'S FINE OY'S.



THE luxury of a good "Oyster"—a genuine "Cove Oyster;" one of your Baltimore or New Yorker's (the very thought of which makes one's mouth water)—can always be found by those who can appreciate them, either in the Shell, Broiled, Fried or Stewed, and in true epicurean style, at "DAN'S OYSTER SALOON;" and with this appetizer, before or after, every other dish of dainties, such as those who appreciate good things can always find at DAN'S OYSTER SALOON,

Montgomery street, bet. Commercial and Clay, San Francisco.

Splendid Merino Rams and Ewes.

ANY person wishing a few very superior Merino Rams and Ewes can be supplied if they call for them immediately. WARREN & CO.,

v7-10 130 Washington street, San Francisco

Ho! There, Everybody! Face the Music and Read!

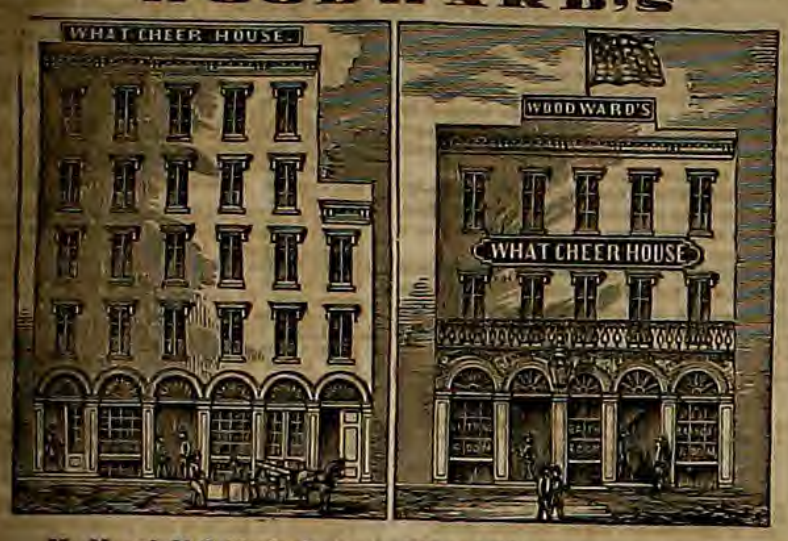
Is you have business of any kind to transact, is it not important that you should endeavor to get as near as possible to where business of all kinds is known to center?

Do you wish to patronize a house conducted on strictly temperance principles?

Do you want to stop at an establishment favorably known throughout California, Oregon, and all other places, for its moderate charges, good tables and best of beds, together with order, comfort, convenience, and superior accommodations?

If you desire all these, we advise you to go to

WOODWARD'S



87, 89 and 91 Leidesdorff street---119 and 121 Sacramento street.

This establishment is centrally located in the principal business part of the city, and in the immediate vicinity of the Steamship Company's Office, the Express Companies Offices, and the United States Branch Mint.

BOARD, per Week, $6. BOARD, per Day, $1. MEALS, 50 cts. LODGINGS, 50 to 75 cts. per Night.

☞ Single Rooms, furnished complete, 75 cents per Night.

☞ Rooms or Lodgings can be had by the Night or Week, with or without board, to suit the convenience of all.

The Beds are fitted up in the very best style, with patent French springs, and the best of curled hair mattresses, clean bedding, &c.

☞ BATHS FREE! ☜

By unremitting attention and untiring efforts to furnish the greatest amount of comfort and convenience at extremely low prices, the proprietor hopes to merit a continuance of the increasing patronage that the What Cheer House at present enjoys.

For the accommodation of miners and others having money or valuables, there are two large safes in the office. There is an extensive Library and Reading Room, well supplied with papers, periodicals, &c.

THE HOUSE IS OPEN ALL NIGHT.

☞ Travelers will please to remember that there are no "Runners" connected with this establishment. The What Cheer House is conducted on strictly temperance principles.

MEDICINES, &c.

J.L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony to its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

Literary.

New York, April 12, 1857.

The great Trade Sales, which have been held at the Auction Rooms of Leavitt, Delisser & Co., and Barry Bros. & Co., New York, have absorbed most of the attention of the Publishers for the past fortnight. The sales have been well attended, purchasers being present from all the principal cities throughout the country. The bidding was quite spirited and good prices realized, and the sales have given general satisfaction, surpassing that of any former season. It is estimated that the receipts of the two sales, will amount to about 300,000 dollars.

Among the new publications, we notice a new and splendid work, about to be issued by Stringer & Townsend, entitled "Frank Forrester's Horse and Horsemanship of the United States, and British Provinces of North America," by Henry William Herbert. The work will be published in two superb octavo volumes, and be sold by subscription only, at $10. It has been prepared with great care, and will contain steel engravings of the most celebrated American horses, which will make it a most popular work for all interested in the sports of the Turf.

Appleton & Co., New York, publish soon, a new work, "Biographical and Historical Sketches," by T. B. Macauley, which will be welcomed by the many admirers of the above writer in this country.

Shepard, Clark & Brown, Boston, announce a new work by Mrs. J. T. Bickford, entitled "Scandal," which, which from the well known ability of the authoress, is expected to make a sensation.

Ticknor & Fields, Boston, have just published—"Guy Mannering," being the second two volumes of their beautiful edition of the Waverly Novels. The series are receiving the most flattering patronage, large editions being published to meet the demand, and no one should fail to add these valuable works to their library, the price being within the reach of all. They have also in press a new volume of Poems by Alexander Smith.

James French & Co., Boston, have just published—"Four Years upon the Pacific Coast, or incidents on land and water," by Mrs. L. B. Bates. We would truly recommend this work as worthy the attention of every one, who would gain a more extended knowledge of that interesting country, called the Land of Gold.

California, although thickly settled by the industry and enterprise of the pioneers, is still a land of interest; the much desired El Dorado, the goal of the ambitious, and the desire of those who would become rich in gold and gems, and the treasures of the rare and curious of this far-off isle.

The work abounds in graphic descriptions of men, things and places, and will be of value as a reliable work for reference, statistical information, &c. The candid and truthful manner in which it is written will secure it as many friends in California as in the Atlantic States. Some idea of its popularity may be known from the fact that the first edition, and a large one, was sold in a few days, and the second one is nearly exhausted. Much of value will be found in its pages, aside from amusing incident and pleasant story.

De Quincy.

Desperate Fight with a Grizzly.—James Wilburn, a packer, well known about Bald Hills, had a most desperate rencounter with a grizzly, on Hay Fork of Trinity river, one day last week. He was out hunting, about a mile and a half from his residence, when he came suddenly upon an immense grizzly. He at once put a large-sized piece of cold lead into his bearship, which caused him to seek shelter in a dense thicket. Of course Jim followed, and catching a glimpse of bruin's ugly countenance, again raised his rifle and pulled trigger, but the cap failed to do its work. At this moment the grizzly discovered his persecutor and started for him with terrible growls and murderous intent. Quick as lightning Jim brought a revolver to bear upon him, and put five balls into his carcass, and was in the act of administering the sixth, when the bear with his paw knocked the pistol out of his hands. However, the desperate hunter was not yet disarmed. He still had a large knife, which he drew, and then came the tug of war. They went at it knife and paw—struck over and under, and occasionally indulged in a "side-winder," that favorite stroke of bruin. At last the knife, which had been playing all about the vitals, proved the victor, and with a savage growl, this monarch of a California woods yielded up his life to the Maker of bears and his carcass, which weighed about one thousand pounds, to the victorious hunter. He did not die, however, without taking a horrible revenge, and Jim Wilburn's trigger finger will never endanger the life of another bear. He won the fight at a terrible cost. The bear bit off his arm above the elbow, and injured him severely otherwise. We are informed that he is lying in a very dangerous condition.—[Shasta Courier, 16th.

Immigration.—An immigrant train, direct from Salt Lake, and a drove of horses, arrived at Placer, having wintered at that place. Their destination is Bear River. They left Salt Lake April 20th; report large droves of stock and numerous pack trains on the way to Placerville. They had met parties in and beyond Carson Valley trying to turn immigrants by the Big Tree route.

A party of over one hundred will start across the plains on Saturday; they are camped within two miles of Placerville.

Honey Lake.—On Sunday, the 10th of May a Mr. McMurty, from Honey Lake Valley, came down to Carson Valley, with two wagons, which he loaded with potatoes. He paid for them two cents per pound, and said he would sell them for fifteen. He reported that Honey Lake Valley, since the news had been received that it was made the terminus of the National Road, has been settling up very rapidly. During the winter, two hundred and fifty acres of wheat had been sown, which was looking remarkably well. Upon the Honey Lake route, during the winter, snow had fallen to the depth of ten feet.

Asthma.—This most disheartening complaint has been cured in many instances by the use of Wistar's Balsam of Wild Cherry. Surely anything that will afford relief from this painful disease will be hailed as a real blessing. None genuine unless signed I. Butts on the wrapper.

Commercial and Financial Matters.

The following excellent article we copy from the Alta of yesterday, and cheerfully commend it to our readers; they will notice with pleasure, that many of the principal points to which attention is directed are those which we have often spoken of, and called the attention of the public to, during the last two years; but we rejoice that our public journals are now awake to their importance:

An enigma is presented of a country, whose chief production is gold, being on the doubtful side of a state of solvency. Not that the supply of income is below the amounts required for ordinary expenditures for State and city purposes, or for commercial transactions of a legitimate and healthful character—where thousands are required and thousands used for the increased demands of a young, rich, vigorous and rapidly growing country—but because a disposition has heretofore prevailed in all departments here for a too lavish expenditure of money, for almost every project that is commenced; as, also, a great extravagance in public appropriations—enormous salaries and still greater perquisites to public officers, and the personal gratification of the luxuries of life; an amount of expenditures not warranted, in many instances, by the pecuniary condition of the dispenser of such prodigality.

These, however, are not the only causes of our present pecuniary distress and doubtful solvency. Thousands of dollars of foreign capital are loaned at most exorbitant rates of interest—investments made in improved and unimproved real estate—storehouses and dwellings accumulate beyond the actual requirements of the business interests, or for the accommodation of our present population. In most instances, owners rely upon rents to pay the actual cost of the property, and taxes and assessments thereon, but, in the present depleted state of our financial affairs, this is too much to expect. For the matter of rents alone, rates have lessened, upon stores particularly, fully fifty per cent. within the past twelve months, while the rates of interest on money remain nearly the same. Rents are still too high to induce the immigration of families among us, and the rates of interest are far beyond the ability of any one to pay who does business in part on borrowed capital, from the revenue derived therefrom. The payments of freights alone on merchandise which we do not require, very materially deplete our finances which, with the enormous amount of bullion sent out of the country semi-monthly, for unconsumed merchandise, and also as extravagant interest has worn a hole in the purse, which must be stopped before replenishing can be judiciously or safely resumed. Many articles produced and manufactured here will command a profit in the Atlantic States from present California prices. We took occasion yesterday to refer to the exportation of hides, one article alone, which we ship to the Atlantic States to be tanned and dressed, and then returned to us as leather, when, at the same time we have several establishments located in this country which are engaged in manufacturing leather from the raw material, which is disposed of at rates as low, if not less, than those charged elsewhere. Again, we might add to the list, hemp, Oregon tar, lumber, butter, barley, and a score of others, which will bring advanced prices in New York from the present charges asked here. The many articles that eastern shippers force upon us on speculation solely, will in a few months open their eyes to see the reckless course that has prevailed there, tending to glut our markets with articles which we do not want, and which they persist in doing, too, without the least knowledge of our resources, supply, or wants.

Competition is said to be the life of trade; yet competition here cannot possess the element of vitality, when expenses are not lessened in proportion with a diminution of profits in conducting business, and he who employs a capital upon which his revenue is eight or ten per cent. per month, and his expenses and losses twenty per cent. during that time, cannot count up figures satisfactorily. The hope of a better state of things, however, induces him to continue in business until insolvency is the result of his operations, which, of course, produces pecuniary embarrasment to those whose confidence has classed them among the list of unfortunate creditors.

Let us systematise importations, and the East export from a knowledge of our wants, supply, and resources, and we will be as good customers as they can have; pay as good profits as their investments, risks, and moderate desires deserve; enrich them by our trade, ourselves by economy and prudence; retain a large portion of our gold among us, and establish a healthier state of affairs thereby, than exists under the prevailing spirit of doubtful enterprise, and profitless ventures.

The Steam Wagon.—The Sacramento Item gives an interesting description of the Overton Steam Wagon, now being constructed in that city. The machine, when completed, will be nominally of ten and a half horse power, but practically of much greater capacity. The entire length of the wagon bed will be 23 feet, and the width 7½ feet. It will run upon four wheels of six feet diameter, 18 feet apart from center to center, and nine feet apart in width. The frame work is supported by leather and steel springs. This frame supports a boiler of 11 feet in length and 3 feet in diameter, in front of which is a water tank, to contain 500 gallons of water. The station of the "pilot" is in front of the boiler, and his duty is to steer the wagon. The position of the engineer is at the hind end of the boiler, at which the fuel is carried, and the fires are kindled. On each side of the boiler is a cylinder which by their action through crank and cog-wheels, turn an eccentric shaft beneath the bed, by which eight substantial "legs" are made to "walk." They raise and descend alternately, four of them always being on the ground at once. They are set at the proper angle, so that with each revolution of the shaft the entire power of the steam is applied to *pushing* the wagon forward. These legs are hollow, and contain India rubber cushions, for the purpose of preventing jarring. It is firmly believed by Mr. Overton, that these wagons can be made available even in our mountains, for hauling heavy loads. Gentlemen of ample means are engaged in the enterprise.

The news from the Southern Mines is of an encouraging nature. New strikes are continually being made and rich claims discovered, that furnish convincing evidence that the Southern mining region requires only ditches that may furnish plenty of water, to enrich the miners of that portion of the State, and pay them abundantly for their labor in search of the glittering oro.

Two men at Columbia, out of money and luck, started off a few days since with two days' provisions, and proceeded a mile and three-quarters from the town, where they commenced prospecting, washing out 5¾ ounces that night. In eight days succeeding they took out $11,000. So says the editor of the Columbia Gazette, who handled the oro.

AGRICULTURAL.

Harvest Machines!!!

We are now receiving our stock of Machines and Implements for the coming harvest, and having engaged the services of Mr. S. L. Palmer, we hope to give entire satisfaction to such as may favor us with a call for machinery this season.

We have—

McCormick's celebrated Reaper;
Burrill's do
Hussey's (Baltimore) do with Mower attached;
Manny's do
Palmer & Williams' do self-Raker;
Seymour & Morgan's do do
Ketchum's Mower;
Hall's Thresher, 8 or 10-horse power, with Smith's power—best power in use;
Pitt's Thresher, 8 or 10-horse power, with Pitt's power;
Spencer's do do do Perigo's do
Emery's 8-horse Thresher's, with tread power;
Smith's and Parigo's Powers, extra;
Single and Double Tread Powers, extra;
Revolving Horse-Rakes, 8, 10 and 12 feet long;
Grain Cradles, Sickles, Barley Rakes;
Hay Rakes, Hay Forks, Scythes and Snaths;
Steel Teeth Hay Rakes;
Fan Mills, Grist Mills;
French Burr Mill Stones—3, 3½ and 4 feet;
Boston Clipper Steel Plows—just received;
Eagle No. 2 Boston Plows;
Churns of all kinds, &c., &c., &c.

N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 3m

The Great Stump Puller.

We invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day.

WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. (v7-9) WARREN & CO.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (Sorghum Sucre).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the California Farmer. v6-13

Smith's Pomological Gardens
AND
NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous to mention.

We would call particular attention to our large stock of extra size Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.

Downing's Rural Essays.

Edited with a Memoir of the Author, by George William Curtis, and a Letter to his Friends, by Frederica Bremer. In One Volume Octavo.

Of Mr. Downing's reputation as a writer, it is almost superfluous to speak. He is, by universal consent, the best and most interesting among those who have chosen the same line. This volume contains all the editorial papers in the Horticulturist. The memoir will be read with great interest, on account of the amiable and excellent character of Mr Downing, as well as his well-earned literary fame. Miss Bremer's testimonial to his merit is an eulogium equally worthy of him and of herself. The volume closes with a series of interesting letters from England.

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfilment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6½ *cents per quarter*, or 26 cents per year. This is the lawful postage established by Congress and when more is exacted it is a violation of law

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME VII. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, MAY 29, 1857. NUMBER 20.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNIN
Simultaneously at Sacramento and San Francisco.

Office—on Fourth street, between J and K, Sacramento.
—No. 130 Washington street (up stairs), San Francisco

TERMS.—Five dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

☞ Advertisements and Subscriptions must be aid for in Advance.

Agricultural Reviews and Essays---No. 13.

The Book of Nature.

(ARTICLE 2ND.)

THE curtain falls. The first act of the drama is concluded. Again the curtain rises, and another act begins. A new character makes his appearance. Man, "the lord of creation," comes upon the stage. How does he perform his part? How ought he to perform it? Too often, alas! what he ought to do and what he does are in direct antagonism.

What part does *Nature* intend him to act? That is his duty. So far as other animals are concerned, anything more is irrelevant—anything different, wrong. To him she has been more than usually indulgent. He is an omnivorous animal. Of every tree bearing fruit, and every herb bearing seed, which are not poisonous, he may freely eat; but he is not confined to them. The cattle upon a thousand hills have been made for his food, and he has cunning and capacity to make them useful slaves. The fish in the seas and rivers for him are suitable fare, and also the birds which fly in the open firmament of heaven. He need not fear want if he use common discretion. But such discretion he often neglects. We have seen that the balance of the food and numbers of the lower animals has been beautifully adjusted. Let him be careful lest he derange a system which is in perfect equipoise.

Let us dispense with books. Let him learn by experience. The first thing which man does when he settles in a new country is to look out for himself a suitable location, where he may proceed in cultivating the ground, as those plants on which he chiefly subsists cannot be raised without human industry. But the country has many animals on whose flesh he feels a desire to feed. What right has he to do so? As we have seen, with the exception of a few at the top of the list, there is no animal which before man comes on the stage has not already been pre-empted, as the natural food of another species. If therefore man proceeds to slaughter every creature he meets indiscriminately, he must derange the machinery of the system, which till then was going on in perfect order. The killing one bear would produce a consequent increase among the different animals on whose flesh the bear subsisted. When man therefore kills a bear, he must be prepared to take the bear's place; he must do the bear's duty, and for his pains be content with the flesh of the animals on which the bear lived. To take more would be to reduce, and eventually annihilate, creatures which with a wiser economy might prove a lasting benefit to him. To take less would also eventually do the same thing; because, although they would increase in consequence for a time, after a time, as in the case of the sheep, their increase would become so great that Nature would be unable to furnish them the means of subsistence. When a new country gets settled the usual course is, and it is as a general rule the best policy, to kill all animals which live on other animals whose flesh is eaten by man. Thus man is enabled to have for himself every creature on which such animals lived, as his property by right of conquest, without any interference with the enjoyments of other creatures. This is all right; but he must be sure that he does not kill the blackguards faster than he ought. Mr. Sadler mentions as a case in point, how in the West India possessions of Great Britain the early colonists set to killing the alligators in the rivers, but at the same time were so actively engaged in cultivating their fields, that they did not divert any portion of their time to the less profitable occupation of catching fish, and as a natural consequence, that they multiplied so fast that shoals of dead fish might have been seen anywhere along the shallows, which only stunk and sent forth pestilential vapors from their rotting remains. There they killed the alligators too soon. In California, in many instances I am afraid, we have done the same thing with the cayotes. The cayote, no doubt, is a nasty, yelping thing, and has few qualities calculated to procure for it human sympathy; but it lives principally on squirrels. Men however have a sort of natural antipathy to cayotes, and forgetful of the benefits which the race, if let alone, would confer on the farmer, they kill them. And, in many places, what has been the consequence? It might have easily been foreseen. The squirrels on which they lived, freed from the check which Nature had wisely provided to prevent their too rapid increase, get more and more numerous every year, and farmers discover, when too late, that the cayotes, with which they had not the prudence to form an alliance, if let alone would have been their best friends.

In this instance man has violated the laws of Nature, and he suffers for his offence. Let me be no *particeps criminis* with him in his iniquity. I do not allow that he has a perfect right to kill any wild creature which he pleases. I maintain that he has no right to kill a single creature, except he be prepared to take the duty which that creature was performing upon himself. The truth is, uneducated man is more of a brute than he is willing to admit, and feels a sort of natural pleasure in exhibiting his superiority over other creatures, by his being able to afflict and destroy them!

But Nature is a moral teacher. When man finds that his punishment follows quickly at the heels of his offence, the same selfishness which prompted him to commit a wanton shedding of blood, induces him to pause before he be guilty of acting in a similar way with other creatures. Prudence tells him that the brutal enjoyment of which he felt disposed to boast has been purchased at too high a price. "*He has paid too dear for his whistle.*" And he is more ready to listen to the lessons of humanity now, when his interest, as well as his stifled conscience, calls upon him to forbear.

But prudence and experience between them effect a further change upon his nature. He is led to estimate himself more correctly. He begins to perceive that a better acquaintance with animals is of much importance to him. He acts less on the impulse, and more after cool reflection. He is less of the brute, and more of the man. He thinks, he reads, and he studies; and he profits in every way by doing so. He discovers that he has duties which he did not think of to observe, as well as privileges to enjoy; and that it is impossible for him to have the latter long, if he do not discharge the former.

Let us go back to the squirrels and cayotes. How ought we to have proceeded in that matter? It is evident we should have commenced the work of death by killing squirrels. If we had done so, the balance would have been in our favor, if we had not been foolish enough to kill cayotes also. Pressed by the diminution of their usual means of subsistence, the cayotes would have watched the squirrels with greater vigilance, and tamed by hunger would have been bolder in their attacks, and more indifferent to the presence of man. As we got better acquainted with them, and more conscious of their value, we might have discovered a number of reasons for liking them which we are now, from a well-grounded suspicion on their part, prevented from doing; while they on the other hand might have found reasons for attaching themselves to us, to an extent which now we have no reason to expect. In time, we might have exterminated the squirrels in settled districts; and then having no further use for cayotes, if it had been necessary, we might have exterminated them also. But that would not have been necessary. The cayotes, finding their means of subsistence gone, would have gone further away, a few only remaining to pick up stragglers; but having become aware of the friendly feeling of man towards them, they would have only gone as far as necessity compelled them. Thus they would have proved a natural defence against any inroad of those voracious vermin, which now threaten by their numbers in some places to exterminate the settlers!

I might multiply instances to show the necessity of using great caution in interfering with the natural balance which prevails in the animal world. But "*verbum sapienti sat.*" It is evidently necessary for every man to be acquainted with Natural History, and to be fully convinced of the delicacy of the machinery which Nature has established for the preservation and comfort of the animal world, if he, the most gifted, would not be the most miserable animal of the whole. The fruit of the tree of knowledge which originally proved our bane, is now our only antidote against a thousand ills which threaten us on every hand.

To the contemplative mind the study of Nature is fraught with many a lesson. The present subject is as abundant in instruction as any. We find the lower animals beautifully arranged and contrived to form a natural and necessary check to each other. We find also, when half-civilized man, following his brutal instincts, interferes with them improperly, he is soon made conscious of his guilt, and in time becomes wiser and better. "The hand of little employment," says Hamlet, "has the more delicate feeling." The mere abstinence from acts giving pain unnecessarily to animals, has a tendency to soften and humanize the mind, and make it feel more reluctant, and less suited by disuse, to fraternize with such uncongenial barbarity. Thus, the machinery of Nature includes within it a wheel which is gradually and almost imperceptibly improving the world. Not only is man getting daily better informed, but his moral qualities are keeping pace with his mental improvement. We may not be able to discover the fact by an examination of individual cases, but take the world at large and the statistics of crime fully bear out the assertion.

TITANIA.

TITANIA (1084); winner of the first prize in the two-year-old class of Devons, at the New York State Agricultural Show, at Elmira, 1855, and at U. S. Agricultural Show, at Boston, 1855. Imported and owned by Edward G. Faile, West Farms, Westchester county, N. Y. Bred by Geo. Turner, of Barton, near Exeter, England. [The two fine Devon yearling Bulls imported by Col. T. J. Henley, and which arrived here this week by the steamer (see notice elsewhere), were from from the herd of Mr. Haile, the owner of the above.]

One thought begets another. If our Divine Creator has implanted in our nature, and impressed upon Nature generally, a something which connects moral advancement with intellectual, if the world is necessarily improving, if the thoughts, feelings, and desires of humanity in general, are getting changed, softened, and ameliorated, and if this amelioration is traceable in some degree to our better acquaintance with, and more perfect recognition of the claims of the lower animals, the mere supposition induces us to direct our attention as to how far we differ from them, and in what respects we are alike. One thing is certain: In one respect we resemble them exactly. We are all subject to Death. But that wheel within the wheel, that improvement-working piece of machinery, is peculiarly applicable to man. It is true, the condition and qualities of the other animals may be, and are daily being, improved; but that is his doing. Separate them from man and they would gradually fall back to their former mediocrity.

I would like to inquire a little into the influence on the human understanding of this improving machinery which applies to man alone, this growing antipathy to the giving of pain, this aspiring after more complete self-control, this increasing disposition to comply with the behests of conscience, and to contemplate this moral progress of man in connection with the more prominent fact of his intellectual improvement. If the whole is destined after a few short years to end in the annihilation of each separate individual, the gift is cruel. It only makes him the more conscious of the value of life, and of those powers and faculties of the soul of which he is so soon to be deprived. Let us look back to the reason which made Death a necessary agent in the empire of Nature. We find, in every other respect, every act of the Creator dictated by pure benevolence. In this respect too, as owing to the want of room for the ordinary increase of the several animals with which the earth is peopled, there was no other way by which the primary ideas of the Deity could have been carried out.

By allowing our minds to dwell too much on one department of human knowledge, we are apt to get undecided in our conclusions from the want of sufficient information. Let us extend our inquiries.

"He who through vast immensity can pierce,
See worlds on worlds compose one universe,
* * * * *
May tell why Heaven has made us as we are."

Let us avail ourselves of the evidence which Astronomy is likely to afford.

When we look through an ordinary astronomical telescope, we find the stars are multiplied fifty-fold. Look through Herschel's, and that proportion is more than doubled. Look through Lord Rosse's, and they are doubled again. There is no telling in what proportion the visible stars are increased. Their numbers baffle conception. To count them would be impossible. To calculate their numbers, not even a rational approximation could be formed. We feel disposed to believe that their number is infinite. And they say they are suns, each having worlds revolving around it as our sun has. We get lost in thought. Let us repress "imagination's airy wing." We want to tread the path of sober reason. Let us return to our own system. Here we find beyond a doubt that ours is only one of several planets, which are lighted and warmed by the same sun; that they have varieties of seasons as we have, and similar alternations of light and darkness; and in almost every respect, we have proof positive that they wear a close resemblance to the Earth. It is a natural conclusion to believe that they are inhabited. Then there is the sun himself, a more mysterious object; but the more we pry into his properties, the more we feel disposed to presume that he too is inhabited. We do not feel so confident however about this. Leaving our own system, and taking some of the more brilliant stars which are evidently nearer us than the others, we are led to conclude, as they all shine by their own light, that they resemble our sun in other respects, and like him are surrounded by planets, although their distance precludes the possibility of our seeing them; and after supposing the existence of such planets, to suppose them inhabited. Our reasonings, I admit, are getting gradually more problematical; but we have established one point beyond the possibility of doubt or cavil—that the creative powers of the Deity are unlimited. Let us apply this fact, thus clearly established, to the subject which we were previously contemplating. If the Deity was obliged to introduce Death into our world, as a necessary means of removing the different animals, not excepting man, with all his noble powers of thought and capabilities of moral improvement, or make him a creature perfectly anomalous from the rest of creation, which in the iniquity of his nature he feels, as he is, disposed to tyrannize over, from an idea of his superior importance, he is under no necessity of annihilating him, from any want of power to provide for him elsewhere. Again, our moral feelings in this life are often severely tested. Apparently our comfort would be much increased by listening to the seductions of sin. But our better feelings support us, in the hour of trial, and our feelings themselves are supported by the reflection, that

"The poor oppressed man
Had never sure been born,
Had there not been some recompense,
To comfort those that mourn."

Thus Reason and Feeling unite with Revelation in pointing the way to Heaven. While we are grateful to Him who "brought life and immortality to light through the Gospel," let us also be thankful for the corroborative testimony which Nature affords, of "the sure and certain hope of the resurrection to eternal life."

This Article and the preceding are probably a little too religious, but farmers must be the more convinced of the dignity of their occupation, since it makes them familiar with subjects which so naturally tend to produce holy contemplations.

AGRICOLA.

P. S.—Having directed my attention but little to the study of Optics, and trusted too much to memory, I presume I made a mistake in No. 2 of this Series, in regard to the angle of the Rainbow from the solar axis. The error however is the less material as it does not affect the argument.

A.

Cultivation of the Beet Root in France.

THE Boston Traveller, in speaking of the cultivation of the beet in France, for the purpose of distillation and for other purposes, refers as follows to the English papers, and quotes European authority for the statistics, which are, of course, reliable. But, in their estimate of the quantity of beet root per acre, they set it down at twenty tons per acre—California can raise sixty tuns. These facts are worthy of note. We commend the article:

DISTILLATION OF SPIRIT IN FRANCE.

The British papers animadvert upon the large quantities of cheap spirit which have been exported from Great Britain to France, within a few years, and aver that it is imported again in a different form, and re sold at an enormous profit, to the great loss of the English people, and the gain of the French distillers and adulterators. Large quantities of whisky, rum, and alcohol have been shipped from the United States to France for several years past, and it is no doubt sent back to us again, as it is England, and it can hardly be otherwise than that the French distillers are making great profits in the trade, much to the pecuniary disadvantage of the United States.

The enormous levies which the French have made upon the cheap liquors of other countries, and the great increase in beet-root distillation, shows either an astonishing decrease in the grape harvests or an increase in the spirit manufacture, which almost surpasses belief.

In 1853, only $100,000 worth of beet-root spirit was manufactured in France, while in 1855, no less than the sum of $10,000,000 was realized from the manufacture of this article, an increase never before paralleled in any business.

It is possible that the vine disease has been greater in France than is generally supposed; for when they are distilling so greatly other products, it may be policy on their part to keep the great deficiency of grapes from becoming too public a matter. The number of acres under vine cultivation in France exceeds 5,000,000, giving employment in the cultivation of the vine and the manufacture of wine, to about 2,000,000 persons (mostly females), and in its transportation and sale to 250,000 more. The vine disease, now more or less prevailing in all vine-producing countries, has increased the average price of wine and brandy from 100 to 175 per cent. About 90,000,000 gallons are annually distilled into brandy, the exportation of which is under special government restrictions. In 1849, it is stated, there were produced in France 925,000,000 gallons of wine, which was nearly a barrel for every inhabitant of the country.

Some of the English farmers have commenced distilling from beets and mangol wurtzel. It is stated that twenty tons of Silesian beet will make more proof spirits than two acres of good barley, and that amount of beet crop is a low average to the acre, the residium of an acre of beets thus distilled, is described as double the value of the grain from the two acres of barley for feeding either cattle, sheep or pigs. The fermenting and cooking of the roots in the process of distillation elaborates more of the inert nutricious elements of the beet than compensates for the saccharine evaporated into spirits.

The process of distillation, in its details, is somewhat as follows: First, the beets are thoroughly washed by a simple machine. Secondly, they are then sliced in pieces about a tenth of an inch thick and an inch wide; these slices are then placed in fermenting tubs, where they are immersed in liquor prepared by mixing certain quantities of acids, yeast and water; there they remain till perfectly fermented, when they are taken out and placed into cylinders in layers, with perforated iron plates between each layer.

These cylinders are the still where the spirit is driven out of the slices of the beet root, by the application of steam laid on at low pressure, which rapidly boils out the spirit, and escapes in steam from the top of the cylinders into an iron pipe, wound into coils inside of a tub filled with cold water. The worm, which is coiled in this tub, passes out through its side, and the cold water surrounding the worm, or tube, condenses the steam within to a liquid, and it escapes from the mouth of the tube or worm into a receiver, of a character from twenty below to twenty above proof. The spirit is not unlike whisky in flavor; it is of course easily rectified and made into spirits of wine, which is the great object of the commerce in France.

It is stated that since the rapid growth of beet distillation in France, the residues have caused a large increase of cattle in that country, and the fertilizing matter in the shape of increased manure has extended the area of wheat cultivation some 80,000 acres. These statistics are taken from the returns given by the French government upon this matter. One valuable feature of this residuum is, that it will keep in a proper condition as food, any length of time, if placed in tanks under ground. It has been tried and found good after two years thus buried, therefore the distiller is not obliged to consume the residuum until it best suits his purpose.

The product of a tun of beets is stated at eighteen to twenty gallons of proof spirits, and the residues left but little reduced in value as cattle food. Twenty tuns of beet to the acre give 380 gallons of spirits, valued at seventy-five cents per gallon, say $285; value of residue as food $25—total $310. Taking from this sum the cost of distillation and allowing for interest on capital, there is left the sum of $255 for net value of one acre of beet, and out of this will be deducted the cost of cultivation, which must show a handsome profit, leaving the land prepared for a crop of wheat.

Buildings and machinery, distillery, etc., of a capability sufficient to work up five tuns of beets per day, it is stated, would not cost over $5000, and an establishment of this magnitude would be sufficient to distil the product of beet from fifty acres.

FRUIT.—Peaches and apricots from Los Angeles are in market. They are diminutive in size.

One-Idea Farming.

Did you ever observe a squirrel in a tin cage, with a revolving wheel attached to it; the apparatus put up in a country bar-room; the squirrel always, when in his wheel, on a keen jump, yet always *at the bottom?* Did it ever occur to you, if the squirrel would *hold on*, he would be a part of the time at *the top*, supposing the gyration to go on?

In the human, the social, the *agricultural* squirrel cage, the gyration always goes on. There are enough uneasy fellows, who must always be on the jump, and always keep the wheel spinning; "argal" (as our moralizing grave-digger says in Hamlet), if one wiser than his fellows *holds on*, the rest will propel him to the *upper side, half the time.* Q. E. D.—Consider that question settled.

Tariffs and rumors of tariffs! speculations and rumors of speculations! foreign markets! a hundred causes are constantly affecting our markets, not only for agricultural gimcrackery, but for our great staples. Wheat, wool, cotton, tobacco, dairy products, all staples that can be named, occasionally reach the point of over-production. It is not easy to change the employment of the stock in trade and fixtures in a moment, and consequently the over-production continues, and reaches a higher point. The business is clean overdone; prices cease to be remunerative; the accumulated surplus remains on hand to keep down the market. Panic then inevitably sets in. Every wiseacre is convinced that this particular branch is not only done up for the time being, but done up, as the boys say, "for good." Every rat is for leaving the sinking ship on the smallest chip he can find to make a raft of.

The water runs towards the lowest place. The agricultural low-place is soon discovered, or at least grasped at. Every previous over-producer makes a push for that. The old stock is sacrificed—the old fixtures are thrown away. If the low place is dairying, every cow in the Kingdom is bought up at an exorbitant price. If it is wool, the price of sheep instantly doubles. But mark! Every one of those who have helped make over-production in one branch (and three times as many more), rushing together into the low place, they immediately make it the *high place;* the spot they have *just left* becomes the low place. The squirrel that held on is at the top; the one that jumped is at the bottom! Finding himself at the bottom, he jumps again, and (like the woman that spoke in meeting) keeps finding himself at the bottom. Q. E. D. Please to consider that point settled.

The best farmer I know of always abandons a particular line or article of production the moment it becomes the *rage.* He sells out *his* stock and fixtures to the eager recruits who are ready to pay double their value, and buys up *theirs* at half or a quarter price. Their abandonment immediately produces under-production, or scarcity, in the deserted branch; it regains its equilibrium, or rises above it; and he is soon ready to sell out again at double price to a new set of restless adventurers. That's the shrewdest kind of a squirrel! By some unexplainable physical anomaly he keeps top of the wheel all the time.

I take it for granted I am not "rhyming to dull elfs," who cannot catch the moral of the foregoing without my making the "practical application," like a good old Puritan dominie in Cotton Mather's days, after reaching 137thly!

There is another kind of agricultural one-ideaism, equally deserving mention and avoidance. It consists in setting but one bowl out when the skies are expected to rain Larks! Your whole farm is devoted to tobacco; the tobacco finds a bad season, or the market is poor. You have a poor show of larks! Division of labor is a good theory in a shop. But a farm is a little kingdom. It must be to some degree self-supporting to be independent or to be thrifty. It is by no means worth while to try to force nature. She won't be forced, if you try it. Canada can't grow oranges. Cuba is not famous for Kennebec salmon. Each will find it expedient, in the long run, to follow the bent of their "nat'ral gifts," as Natty Bumpo has it. If one has what the other has not, then swap and pay the boot! That is the logic of nature and common sense.

A farm is a kingdom. Every farm is, physically at least, a flat contradiction of the legal apothegm, that there can be no "*imperium in imperio.*" Your farm kingdom must not, if you would *catch the larks*, be limited to one, two or three products.

I grant that you must not have but two or or three main staples of production. There is such a thing as frittering—spreading out like a river without a channel—and then the thirsty earth drinks up what the hot sun does not evaporate. In short, you set out such *little* bowls, that you wouldn't catch larks if they should rain plump upon them. They are not big enough to hold a lark.

But in the rough masonry of farming (as in the Cyclopean walls of the Grecian Ithaca) the stones are not hewn into courses. There are interstices, chinks, to be filled. Your main agricultural staples are the big blocks. I propose agricultural "chinkers." Do you get my idea? I propose little bowls for little larks—"small holes for kittens." I am sure you get my idea! [Porter's N. Y. Spirit of the Times.

Points in a Good Short-Horn.

The appearance and points of a good Short-Horn may be thus briefly summed up. The head of the male animals is short, but, at the same time fine; very broad across the eyes, but gradually tapering to the nose, the nostril of which is full and prominent, the nose itself is of a rich flesh color, neither too light or dark; eyes bright and placid, with ears somewhat large and thin. The head crowned with a curved and rather flat horn, is well set on to a lengthy, broad and muscular neck; the chest wide, deep and projecting; shoulders fine, oblique and well formed into the chine; fore legs short, with the upper arm large and powerful; barrel round, deep, and well ribbed up towards the loins and hips, which should be wide and level; back straight from the withers to the setting on of the tail, but still short, that is, from the hip to the chine—the opinion of many good judges being that a beast should have a short back with a long frame. As a consequence of this, the hind leg must itself be lengthy, but well filled in. The symmetry of frame at present to be found in a well bred Short-Horn reaches as near perfection as possible, while few animals handle so well, or to use a still more technical term, have "so fine and mellow a touch." The hair is plentiful, soft and mossy, with a hide not too thin, and in fact somewhat approaching the feeling of velvet. The female enjoys nearly all the same characteristics as the above, with the exception of her head being finer, longer and more tapering; her neck thinner, and altogether higher, and her shoulders inclined to narrow towards the chine. Like most well proportioned animals, the Short-Horn often looks smaller than he really is. The rapidity with which he puts on flesh, and the weight he frequently makes, are facts so well known that it is scarcely necessary to dilate upon them. Still we may mention that it is no uncommon occurrence to see steers of from four to five years old realizing 140 stones of 14 pounds; many ranging as high as 150 stones.—[Enc. Ag.

Rural Discourse.

BY THE EDITOR OF THE OHIO CULTIVATOR.

"Man walketh in a vain shadow, and disquieteth himself in vain."

Forethought is a commendable virtue in all men, and in that class of men who so completely depend upon the seasons, it seems indispensable to ordinary success. The prudent farmer, who is astir before the sun has arisen, casts his eye around the whole horizon, to question the dawn as to what of promise it brings of the day that is coming. This is well,—for the wind, and the cloud, and the dew, and all the voices of the morning, have a revelation for him who seeks it carefully, of what the night has been brooding while he was asleep.

There are periods of time in the rounds of the seasons, upon which the year seems to turn, and it is not strange, that at these times, men should be unusually observant and anxious; and if there is one time which above all others determines the product of the year, it is the seed time, for we know very well that if we do not plant, neither shall we reap. The same time determines the outset life of most of the fruits of the orchard and garden, and all these, coming upon the rural world just as they have emerged from a season of wintry bondage, in which their stores are nearly exhausted, are well calculated to excite an anxious solicitude, as to what Providence ordains for the coming year. We can see a part of the ways of God, but we cannot see all. Here and there He lifts the curtain of His vast designs to the eye of hope and watchfulness, so that we may see enough of duty and promise to make us diligent and hopeful; and these should be the lessons we should learn and practice, with a simple faith. But alas! for the weakness and perversity of poor human nature! instead of this simple faith and obedience, we too often become infidel and disobedient, and go about to fortify ourselves against the possibilities of providential calamities, as though we had a wisdom co-ordinate with that which appoints the seasons to their rounds, and could so hedge ourselves about, that no calamities should invade the circle of our private arrangements.

How do we walk in a vain shadow, while we labor thus! The spider that wove a web to ensnare the ox was not more presumptuous than we, in such a case as this. An overcharged solicitude of this kind, is a peculiar bane of rural life. While it makes men fretful, it prevents their using much of the material for enjoyment which is always within their reach; so that instead of walking in the pleasant sunlight of the present, they grope in the shadow of an anticipated possibility, which did not lay in their path, and which they have gone out of their way to explore; thus, to use a homely phrase, they have borrowed trouble, and are doing business on such a miserable capital, instead of employing their own, which could not have been worse, and might have been a great deal better, with not half the chance of landing them in bankruptcy at last.

When the farmer has exercised a prudent foresight, why should he further disquiet himself? Let him work right on, as though he believed the creed he has professed, and did not count it a lie, that he was vouchsafed seed time and harvest while the world shall stand. Bethink thee, O my brother, of the breadth of that petition—Give us this day our daily bread—a link that binds us with the double power of hope and trust, to the ever living beneficence of Him who ordains both it and us! Then shall every day's toil be in itself a prayer, and every night's repose a thanksgiving! and the anthem of your handiwork shall resound with a more noble music than the strains which linger amid the dim arches of pride, where God is mocked by words that find no response in the hearts of those that use them.

A practical worship is that of the hand, and a practical faith is that which rests itself upon the reward of doing right, and men who thus live a true life, will neither walk in a vain show, or disquiet themselves in vain; but rather they will plant in hope and reap in thanksgiving, and enjoy the good of their labor, as the portion which God has given them.

See! Creation never resteth—
Ever God creates anew;
To be like Him is to Labor—
To adore Him, is to do.

The Relation of the Practical Farmer to the Agricultural Journal.

Mr. Editor: In a former number of your periodical you urged the importance of farmers writing for agricultural journals, and was sorely grieved that the farmers of Pennsylvania, far advanced in practical agriculture, and capable as well as farmers of the other States, as they were, of writing, did, nevertheless refuse to write;—sensible men! They know their interests better. I have rejoiced that they were so intelligent as to leave the business to those who understood it better, and content themselves with reading. For, unless Pennsylvania Farmers can write for their journals better than the generality do, they had better desist. I do not think agricultural papers are the proper medium for interchange of sentiment among farmers. See how it is abused in relation to some papers. What I say would be better illustrated by a paper nearly filled with the miscellaneous communications of anonymous correspondents; but I do not wish to be, as it were, personal. Such communications are of no profit, and only interesting to the individual who makes them, and they are certainly no ornament to the paper, and no addition to its respectability. The place for such questions and communications should be the club room, which should be established in every considerable agricultural community.

It has been most justly remarked by C. Wren Hoskyns, Esq. (Morton's Cyclopedia vol. I., p. 5), "what we want is a book of experiment."

When therefore practical farmers will conduct and collect systematic and detailed experiments, or write sound articles or essays upon any particular subject in agriculture, or facts of undenied importance to the science and its votaries, which latter can be blended betimes into an article by the editor to suit the occasion, let them forward these without delay for publication, and the readers of that journal, will be edified and instructed.

I rejoice that your journal, sir, is filled with substantial matter. Its essays and articles are interesting and instructive to every reader. It is owing either to your editorial ability in sifting and selecting, writing and compiling, or to the sagacity and intelligence of the Pennsylvania farmer.

I hope, sir, your journal will continue unchanged unless by enlargement, that its change may consist not in the material but in the greater development of present practice.

European agricultural journals are constituted of essays and treatises, tried, experimented and proved. Thus are the journals of Great Britain, where this noble science has hitherto been leaving us far in the wake, and where system and order, and experiment to support theory, as in every other art, are continually supporting, simplifying and exalting it.—G., in Farm Journal.

Importance of Mineral Composition to Soil.

It is of the utmost importance in a primitive country for the agriculturist to select when he is about to purchase a farm, a locality where the mineral substances abounding, are of a character calculated to sustain and supply the soil with the material necessary for the production of a vigorous growth of vegetation.

If a soil is selected that is supplied by nature with the elements and substances demanded by the economy of vegetable life, then we have what is termed a soil of a good natural quality; and it is obvious much labor and expense is avoided, nature having superseded the necessity of supplying manures and stimulants at a heavy cost.

Now, if we can find any mineral substance containing a stimulant or manure well diffused by nature in the soil, would it not be wise to select such locality where it abounds?

The substance known as hornblende, belonging to the earthy class of minerals, is very abundant. It is found chiefly in primitive countries, but occurs more or less in secondary formations; it frequently enters into the composition of gneiss, and is an essential ingredient in sienite and greenstone.

It is generally found dispersed all over the district where it occurs, in every intermediate rise, from rocks down to a pebble or grain of sand. Hornblende, its species and varieties, contain more lime than any other mineral that is common and generally diffused, with which I am familiar.

Quartz, or what is called flint, is very abundant, it is almost entirely composed of silex, one of the most abundant earths in nature, but it contains no lime.

Feldspar that is found largely mixed with the soil in small fragments, contains but three parts of lime. Mica and talc, two quite abundant minerals, contain but one part of lime. Serpentine, a very widely dispersed rock, contains but six-tenths of lime. Clay or roofing slate contains no lime; neither does the rock known as mica slate, so abundant in many regions, while hornblende contains 12.75 of lime.

In all districts where the stone in which it abounds is not too hard, the disintegration and decomposition of this mineral is continually fertilizing the soil. The sienite rock, of which hornblende forms so large an ingredient, is frequently quite soft, yielding to any accidental or mechanical force, to the frost and water, being reduced to sand, mixing with the soil, keeping it loose as forming by its chemical agency, an important stimulant to vegetable life.

Land on which hornblende is distributed, or what is usually termed black rock land, does not require the application of so much lime as is necessary upon clay or slaty soils, and it is the opinion of the writer, who is a practical agriculturist, that where the stone is soft it requires none at all, the disintegration of the hornblende being amply sufficient to supply the necessary quantity of lime to the soil to insure luxuriant crops.—[John J. Woodward, in Farm Journal.

The Cause of the Fading of Inks.—A correspondent of the Scientific American, having become convinced that the general complaint of the want of permanency in the color of the writing inks now in common use is not caused by any deficiency in the writing fluids themselves, thus expresses himself as to the real cause of the evil:

"After a large amount of examination I am satisfied that the fault is neither in the ink or the blank book manufacturers, but in the *paper.* At the paper mills they use strong chemicals to bleach the rags, and before the pulp is suitably rinsed it is run into paper containing chlorine, oxalic acid, oil of vitriol, etc., in sufficient quantity to spoil any ink ever made. I know this to be so, having often sold oxalic acid for the purpose—a substance which, it is well known, will destroy the color of the salts of iron, a very necessary ingredient in all black inks, and having examined the chemical effects of the paper afterwards. It is my opinion that a blank book manufacturer who would obtain paper perfectly free from those destroying agents—which can easily be tested by any chemist—would command an amount of trade which would well repay the extra expense."

Aluminum Reduced in Price. — The new metal aluminum, which, when first brought to the notice of the public, was estimated at $2,000 per pound, can now, by a new chemical process of the Messrs. Deville & Rosseau, of Paris, be obtained at a cost of $10 per pound; and it is thought future experiments will place it even below this price. These gentlemen submit alumina, seasalt and charcoal to the action of chlorine, instead of exposing it with charcoal, as hitherto, to the action of the same element. By this method, a double chloride of aluminum and sodium is obtained, which is volatile and liquefiable, but when cold becomes solid. By this mode of operating, remarks a cotemporary, together with some modifications of the methods at present in use, they will be enabled to produce this heretofore rare metal at about $10 per pound. At this price, aluminum may be considered in the light of an article of commerce and manufacture, and its useful properties now admit of being applied to various purposes.

Duties of Cattle Judges.—A correspondent of the Ohio Farmer says: Their duty to the Society and the public requires that they should accurately note down, and specify in their reports, the individual merits and demerits of the competing animals, and clearly point out the points in which the preferred animal excels. You thus systemize and establish permanent rules governing your awards, which must give more general satisfaction to the public and breeders of fine stock.

Early Care of Lambs.—Shepherds having the care of flocks, sometimes find it necessary to keep the young lambs along a few days with a teaspoon, especially in case of early twins; but a better substitute is a small bottle with an India Rubber stopple drawn over the mouth, such as druggists supply for those mothers whose tender infants lack a proper supply of natural aliment. A bottle thus fixed and filled with warm milk, a little diluted, is a great convenient help. I have saved many lambs by means of it.—[Germantown Telegraph.

To be Thought About.—Can a farmer find any better investment for his money, above what is required for the support and education of his family, than to expend it upon his farm, in the improvement of his stock, in planting trees, in draining, enriching, improving and ornamenting the place he has chosen as the scene of his labors and the centre of his comforts?—[New Yorker.

Recreation.

We rejoice to note how our citizens are beginning to turn their attention to those sources of rational amusement so much needed among families of children as Picnics, Sabbath-school Celebrations, etc., etc., and we rejoice also to note, that places of public resort are being opened in all the "beauty spots" of California, where husbands, wives, brothers and sisters, gentlemen and ladies can go and enjoy nature in all her varied scenery—and also awake to life those higher intellectual pleasures that have been slumbering amid the thirst for gold.

The fine Sulphur Springs of Napa, the Soda Springs, also—the Geysers, Clear Lake—these all are worthy a visit for health and pleasure; and, above all, the Great Trees of Calaveras, and the Yosemite Falls. These two latter are worthy of the worship of every lover of the grand and beautiful. At these altars of nature we hope to bow and worship the Great Author of all good the coming season—so our friends, to whom we were so much indebted the last season for a kindly remembrance, may expect us.

We find very opportunely in the Mariposa Gazette of the 22d inst., the following notice about the Valley and Falls, which we now publish, adding also the fact, that a fine artist is now at work preparing a painting of the Falls, to be exhibited this autumn, at the State Fair, at Stockton—where everybody must go, of course:

The past week we, in company with several others, made a trip to Yosemite Valley—the first from Mariposa this season. We found the road in excellent condition, with the exception of that portion of it (about four miles), upon the high divide between the South Fork of the Merced river and the valley, which was obstructed by snow varying in depth from one to ten feet. Being hard and solid, however, there was no difficulty in crossing it. An excellent bridge has been thrown across the South Fork of the Merced, the only water course of consequence on the route, and the trip to the valley may easily be made in one and a half days. The falls in the valley are magnificent beyond description, swollen as they are by melting snows; and we assure all, even those who are entirely devoid of any conception of the sublime, that a visit to the valley at this time will repay them for their trouble, were it twice as far and twice as difficult of access as it is. Over the great Yosemite Falls, which are those upon the northern side of the valley, is running not less than one hundred and twenty feet of water, at the rate of five miles an hour, from an estimation made of the stream below the falls; and this falling from the top one thousand three hundred feet at a single bound, together with another fall of five hundred feet below, some idea may be obtained of the terrible grandeur of the spectacle. To approach within one hundred yards of the foot of the fall will drench the spectator with spray, as it is blown in clouds by the currents of air which is always in strong motion near the falling water. Other falls are at present large in volume. A number of falls upon each side of the valley, running small streams of water from immense hights, are now in full play, which in a month will entirely disappear, and those intending to visit this most wonderful place should do so soon, if they wish to see it in all its beauty and grandeur. The journey may be made from here with without difficulty or danger, and outfits and animals may be obtained without trouble.

Besides the sights in the Valley, the other attractions are inconsiderable. Game is scarce; at this season scattering grouse is the sum total, and it costs more than they are worth to get them. Fishing is tolerable good, but it requires an *expert* to make them bite. Trout are plenty, however, and are taken by the Indians in considerable quantities. Musketoes are both numerous and of respectable size. Also a fair sprinkling of rattlesnakes. Strawberries will be plenty in a fortnight. A few wandering "native Americans" are in the valley, and their numbers will be greatly increased as the season advances. Begging of those who visit the place is their principal business, and is undoubtedly more productive than hunting and fishing, or gathering acorns and clover. They are not, however, addicted to stealing, for the reason perhaps that they cannot get out of the valley with the plunder.

Those in San Francisco, Sacramento or Stockton, who intend visiting this region, can come by stage to Mariposa or Coulterville, at which places everything necessary for the trip may be obtained, and also company, as parties from this vicinity will be going to the Valley frequently for the next two months.

We append, also, a notice of a beautiful and grand May Feast, given at Cape Horn Bar, Trinity river, from the Trinity Journal:

The German May Feast.—The main arbor was thirty by fifty feet, made of spruce and pine boughs, artistically interwoven, and covered with the flag of our Union.

At the entrance the German colors and the stars and stripes waved their friendly folds, inviting all who passed in to a union of hearts and sentiments in the participation of the gay festivities. Adjoining was another arbor used as a dining-room, capable of seating sixty persons. Leading from the dining-room was the bar, where "lager," wine, soda, &c., were dispensed to all with a lavish hand. No strong liquors were allowed on the grounds.

* * * * *

On Monday evening last the final ceremonies terminating the grand feast were performed by the burial of the last of the thirty kegs of "lager beer" by a torchlight procession. The band played a dead march. A transparency was carried bearing a device—an empty beer keg with skull and cross bones, and having also inscribed upon it, "The last of the thirty has departed; peace to his ashes." Then followed the empty keg, carried by four mourners. When arrived at the burial ground the following funeral service was pronounced in a solemn and impressive manner by the officiating N. G. H.:

Dear Friends:—We find ourselves at the grave of the last of the thirty good friends we have to mourn over. Their departure from this world was so sudden and unforeseen that our physicians came too late. The disease made such fatal progress that no assistance could be rendered. It is not yet ascertained what the exact disease was, but the most learned and skillful medical men pronounced it hasty consumption.

They all suffered alike. Their death rattle still sounds in my ears. They were very young to leave this world, but we must believe that fate had marked the period of their end. Our physicians have fearful apprehensions that the disease may appear annually, and even increase in virulence! This, dear friends, would be a sad calamity. Let us hope that the next season may prove more merciful, and that the deceased be not more than double the present number. *Amen.*

From the Southern Country.

SAN DIEGO.

The San Diego Herald, in speaking of the removal of troops, says: Owing to the great drought of the present year Indian crops will be almost an entire failure; consequently, necessity will stimulate their natural desire to plunder.

The Copper Mines, about eighty miles south of San Diego, on the San Antonio rancho, and within six miles of an embarcadero or cove, at the head of Ensenada Bay, are said to be very valuable, the ore containing from fifty to sixty per cent. of pure metal.

LOS ANGELES.

We extract the following from the Star: The residence of Nesario Dominguez was entered, a man tied, and several thousand dollars carried off by some unknown robbers.

Francisco Orduno, who escaped from jail, has been re-arrested.

The train of J. J. Tomlinson, destined for the Arizona Mines, arrived in Los Angeles on the 12th, and left on the 13th. They found grass very scarce. They accomplished the journey from Stockton in fourteen days and a half.

On Monday, the 11th inst., an election for city officers was held in San Bernardino, when the former officers were re-elected, with the exception of the Treasurer, who declined.

SANTA BARBARA.

The digging of the well in the rear of the church has been suspended. We are informed that the present depth is one hundred feet, all of which has been drilled.

FROM THE GADSDEN PURCHASE.

By the arrival at Los Angeles of Mr. Werneger (formerly of San Francisco), from the Gadsden Territory, we have accounts from that District to the latest dates.

Major Stein, commanding the troops at the Calabazas, was to start out in the beginning of the month for a hunt after the Apache Indians, taking with him two hundred troops, one hundred Pino and Papago Indians, and a number of American and Mexican packers and guides. He expected to meet another party from New Mexico in the White Mountains, distant about 300 miles from his post.

There were about three hundred men, under the command of Major Stein, at the post.

Farming in the territory had been attempted on a very small scale. The crops, however, were generally very good—embracing wheat, barley, beans, etc.

The Pimo Indians had the most extensive and varied crops in the territory. They occupy a fine tract of land, which they irrigate by leading on to it the water of the Gila river. Their crops promise an abundant yield. To this land they have a legally executed Mexican grant, and a source of great anxiety with them is lest the United States Government should take it from them and drive them off. They have the finest stock in the country.

We give the following table of distances. It may prove of interest, as the district is attracting considerable attention just now: From Fort Yuma to the Arizona mines, 120 miles; Arizona to Calabazas, 130 miles; Calabazas to Tucson, 70 miles; Fort Yuma to Tucson, 280 miles; Tucson to San Xaviel, 40 miles; thence to Tubac, 45 miles; thence to Calabazas, 15 miles.

Tucson is a miserable place. It is situated in an alkali country, and can never become become a place of any importance. The river sinks a mile or two below the town.

Major Stein has been ordered to erect a post within ten miles of Tucson, but it would be utterly impossible to keep troops there, it is so unhealthy, and without wood, water or arable land. The Calabazas, where the troops are now stationed, is a healthy country, with an abundance of everything necessary for the supply of a post—good land, plenty of wood, water and grass.

Mining Intelligence.—Mr. Wernenger discovered and took up for the purpose of working, a silver mine, about twenty miles southeast from Tucson. In the locality fuel and water are abundant. The ore is very rich, the alloy being copper and lead.

Mr. Poston, formerly of San Francisco, is located at Laravaca mine, which he has just opened and prepared for working. It is generally supposed to be very rich. He has purchased the Laravaca ranch, one of the best in the country. Mr. Douglass, at the Sopra ranch, is also engaged in mining, not extensively but profitably.

From Oregon.—The Oregonian says: Messrs. Friendly & Sellers, of Portland, received on the 22d inst., 160 ounces of gold dust, direct from Colville mines. This house alone have purchased 400 ounces of gold dust from Colville within the last two months. We learn by those recently in from the mines, that men who work can easily make one dollar per hour with the common rocker.

Rumored Fight with Indians.—News has been received from the Dallas of the commencement of the Indian war. It is reported that a detachment of regulars had a fight with the Indians in the Walla Walla country. Two regulars were killed and six wounded. The Indians lost twelve. The hostilities commenced by the Indians threatening to destroy the corps. The report was not generally credited, as it was not confirmed by subsequent advices.

Cooking Hominy.—Mary Whitesides furnishes the Ohio Cultivator a recipe for cooking hominy "with one-fourth the labor of the old way. Put your hominy over the fire as usual, and boil one hour; take it off and put a blanket over it, then turn a tub over that, and let it stand till cool, and it will be perfectly cooked."

Corn Cake.—"Minnie," in the same publication, gives the following for corn cake: Six cups of good buttermilk, one egg, salt enough, and a tablespoonful of saleratus; make thin as batter for frying, beat quickly and only long enough to free from lumps; pour into buttered pans and bake half an hour. This is light, with nice tender crust.

A Mistake.—The mistake generally made by those who desire to acquire or to beget in the young a taste for reading, lies in trying to force prematurely an appetite for serious works. The true course is, to foster and guide the natural curiosity inherent in every mind, and to make the attractive minister to the useful.

"A gentleman," said an accomplished lady, "is a human being combining a woman's tenderness with a man's courage."

Miscellany.

WASHINGTON.

BY A LADY OF ENGLAND.

Land of the West! though passing brief the record of thine age,
Thou hast a name that darkens all on history's wide page,
Let all the blasts of fame ring out—thine shall be loudest far;
Let others boast their satellites—thou hast the planet star.
Thou hast a name whose characters of light shall ne'er depart;
'Tis stamped upon the dullest brain, and warms the coldest heart;
A war-cry fit for any land where freedom's to be won;
Land of the West! it stands alone—it is thy WASHINGTON!

Rome had its Cæsar, great and brave; but stain was on his wreath;
He lived the heartless conqueror, and died the tyrant's death.
France had its eagle; but its wings, though lofty they might soar,
Were spread in false ambition's flight, and dipped in murder's gore.
Those hero-gods, whose mighty sway would fain have chained the waves;
Who flashed their blades with tiger zeal, to make a world of slaves;
Who, though their kindred barred the path, still fiercely waded on;
Oh! where shall be their "glory" by the side of WASHINGTON?

He fought, but not with love of strife; he struck but to defend;
And ere he turned a people's foe, he sought to be a friend.
He strove to keep his country's right by reason's gentle word,
And sighed when fell injustice threw the challenge—sword to sword;
He stood for Liberty and Truth, and dauntlessly led on,
'Till shouts of victory gave forth the name of WASHINGTON!

No car of triumph bore him through a city filled with grief;
No groaning captives at the wheels proclaimed him victor chief;
He broke the gyves of slavery with strong and high disdain,
And cast no scepter from the links when he had crushed the chain.
He saved his land; but did not lay his soldier trappings down;
To change them for the regal vest, and "don" a kingly crown.
Fame was too earnest in her joy—too proud of such a son—
To let a robe and title mark a noble WASHINGTON!

England, my heart is truly thine, my loved, my native earth!
The land that holds a mother's grave, and gave that mother birth.
Oh keenly sad would be the fate that thrust me from thy shore,
And faltering my breath that sighed, "farewell forever more."
But did I meet such adverse lot, I would not seek to dwell
Where olden heroes wrought the deeds for Homer's songs to tell.
Away, thou gallant ship! I'd cry, and bear me swiftly on;
But bear me from my own fair land to that of WASHINGTON.

When Shall We Marry?

We know what old Tenpercent will say: "Marry when you can afford it." That is Tenpercent's answer; and he will not let his daughter go on any less easy terms, although he has money enough to support a dozen or more asylums for widows and orphans. His "when you can afford it," according to the expansive views of the times, means something very different from what it did when Tenpercent, in his youth and poverty, took his Polly to be his wedded wife, for better or for worse, to love and cherish; and is something so magnificent, that only the heir of fortune, or the happy holder of a great prize in the lottery of life, after some forty years or more trial of luck, can possibly compass.

We agree with the political economists, for the most part, that it is essential, as a check to pauperism, for a man to consider before he marries whether he has, or is likely to have, the wherewithal to support a family. We do not think it prudent that any one should inconsiderately—like the old woman in the shoe—burden himself or herself with so many children that he or she may be puzzled what to do. This question, however, of affording to marry, has a very wide expanse of solution. Paddy considers himself entitled to the privilege of matrimony when all his worldly goods are comprised in a bellyful of potatoes. Young America must have a brown-stone house, tapestry carpets, and five thousand dollars a year, at least, before he can venture to become a Benedict.

We shall so far give in to the prudent view of the question, as to grant that it is wise to consider the prospects of a youthful suitor for your daughter's hand. But is it wise to be too exacting? Is it not safe to have some faith in character, health, and the devotion of a young and loving heart? Can you not give long or short credits connubially, as you do commercially; and is it not possible that it may turn out equally to your advantage, and that you may secure happiness for your child by the one, as you have fortune by the other? Take your hands out of your pockets, old Tenpercent, and give a filial embrace to Tom Sprightly, that promising young clerk of yours, and intrust to him your daughter (giving them both enough out of your abundance to help them along in life), as you have long since your more dearly-beloved cash on account. Society, we know, matrimonially and otherwise, is inexorable. Nature, too, is inexorable, and has an interest in the question "When shall we marry?" which should be considered.

Leaving out of the calculation three-story brown-stone houses and five-hundred-dollar cashmere shawls, which terribly perplex the question, and indefinitely postpone its solution, we, if asked "When we shall marry?" should answer to the connubially disposed, be she woman, "Marry at the age of nineteen, or thereabout;" be he man, "Marry at one-and-twenty, or not much beyond." We are looking at the question, just now, only in its physical bearings, and consider our rule as being more especially peremptory amidst the excitements of a highly-inflammatory town life, than in the repose of a comparatively stagnant rustic existence.

The pale faces, *dragged* expressions, meager frames, and invalid constitutions of our women, have been attributed to their early marriages. This is, however, an error, as is well known to the observant physician, who will tell you that the mischief has all been done previous to matrimony, and that this, if not always a specific, is one of the best correctives of the difficulty. Most female disorders, whatever they may be, which make up three-fourths of the whole nosology, are easily traceable to the "hope deferred" of an unnaturally-excited nuptial longing. The whole tendency of our social habits, especially in the large cities, is to foster what the disorganizing friends of the Tribune would call "the passional harmonies" between the sexes.

Look at our boys and girls, still redolent of bread and butter, ogling each other in the street, like so many veteran Chesterfields and Pompadours. Look at them warming in the intimacy of the waltz and the redowa, at the nightly balls of the season, before the very faces of their mammas reddened with sham(e)—blushes of the deepest rouge. Look at them carrying on their coquetries at lecture-room, opera-house, and even within the precincts of home, in the front parlor—however, recollect, with the folding-doors closed. Look at all this precocious development of the connubial instincts—this always thinking of matrimony, and never doing it (according to the Prayer Book, at any rate)—and tell us, old Tenpercent, whether it is safe to put it off until that indefinite future "of being able to afford it" may arrive.

The natural period for the union of the sexes is that epoch when the growth is fully reached. This, of course, varies in individuals and races, but may be set down at an average of about sixteen for the female and eighteen for the male. As, on the approach, and at the time of this consummation of man or woman, there is more or less water of crystalization, if we may use a chemical illustration, which has not yet taken an organic form, or evaporated, it is well to postpone matrimony for two or three years, until the male, as we have already stated, will have reached the age of twenty-one, and the female that of nineteen years.

We know the social difficulties, and we are not disposed to make light of them; but with the artificial notions prevalent, particularly among the wealthier classes in the large cities, these difficulties are made heavier than necessary, and than can be safely borne. Granting that early marriages cannot be indulged in with a due regard to prudence, then we should change the whole system of our fashionable habits, which are constantly leading on the young to the altar, not to receive an offering, but to find themselves a sacrifice. The only corrective that we know of for the evils to health and morals, produced by the inordinate pecuniary conditions attached to matrimony by the rich, who can best afford to be generous, and are least so in this respect, would be to put cowls upon our sons and vails upon our daughters, and thrust them within the iron bars of the convent or monastery, that flagellation may beat out the natural Adam of the one, and fasting may starve out the natural Eve of the other. With the present system, we shall only succeed in making rakes of our young men, and puling, invalid spinsters of our young women.

Consider well the fact, that not only is a single life unfavorable to health of body, but even to health of mind, and that both hospitals and lunatic asylums give, in their terrible records, the most emphatic assertion of the dangers of a compulsory celibacy. So much for the physical advantage of early marriages. We shall leave the moral view of the question to be revealed by the preacher, who, perhaps, will tell us, for virtue's sake, "When shall we marry?" [Harper's Weekly.

Excellent.

We clip the following from the True Californian, and we think we can guess the writer. We agree with him, there is but one *true* way to enter the name of the lady who accompanies a gentleman—and we wish it to be forever understood, that when a gentleman travels with his wife, let it be so written down; and when he travels with any other lady, let him give the name of the lady. This will save a vast deal of trouble in the world, and many misgivings. Amen to W.'s suggestions:

A Popular Error.—It has been customary with a majority of persons when traveling with their wives, to enter their name upon hotel registers thus: John Smith and lady; or Jas. Brown, lady and servant. This has become fashionable, but is anything but correct. What better title than "wife" can you give the woman you have taken as your partner for life. In fact there is no other word in the English language that expresses the relation she bears to you. Your lady, for the time being, is the female you have with you at the theatre. At a ball, the gay belle that a young unmarried gentleman brings with him, is his lady for the evening, or until some other gentleman has taken her on to the floor as his partner in a quadrille, then she is "his lady." But the best reason for not using the term is this fact, which is generally noticed by hotel keepers: that it is always used by men who stand in rather a questionable relation to the lady they have with them. They never hesitate a moment in writing this appellation for her, after their own names, but I never knew of an instance where "wife" was the title made use of by them.

It sometimes happens that a stranger has to take a room at a hotel at night, without baggage; and coming from no steamer or stage, let him register *himself and wife*, if he would allay any suspicions in the mind of the clerk. W.

DECIDEDLY MAGOONISH.—In one of his late lectures, Dr. Magoon relates the following story: "A young man went out from New York city to the West, where he commenced business on his own account, and married. His friends in the city were interested in his welfare, and when a merchant was about to journey to the place where the young man had located, he was requested to visit the emigrant, and ascertain how he lived, what sort of a wife he had chosen, his prospects, etc. Accordingly the New Yorker ascertained the residence of his young friend, and called upon him quite early in the morning. He found him in a small neat cottage, and just taking his breakfast. The introduction of the New Yorker to his wife was quite off hand and unceremonious, and he was requested to be seated and partake of the morning meal. The young wife had prepared the steak, biscuit and coffee with her own hands, and for a table had used her kneading board, over which a napkin was spread, and the board placed on her lap. The New Yorker declined a seat at the table and took his leave. On making his report to his New York friends as to how he found his young friend living, he described the style as 'magnificent,' and for the explanation of the superlative, he said, that were he the owner of that young man's furniture, he would not take ten thousand dollars for the *legs of his table!*"

TOBACCO—DOCTORS DISAGREEING.—We find, in some of our foreign journals, that the tobacco question is again the subject of newspaper discussion, and the material for new books. Among the latest publications is a work by Mr. John Lizars, and a series of letters published in the Lancet by Mr. Solly, both taking the ground that the use of tobacco is injurious. These writers attribute most of the ills which flesh is heir to to this "noxious weed," and assert that there is an evident decline in the French, Spanish and Turkish nations from this circumstance alone. The London Atheneum combats these opinions in a late number:

"We say the whole history of tobacco proves that it can be used without injury. Thousands of persons living can attest the truth. Some of the strongest, wisest, and most pious of men have been habitual smokers without injury to their powers. Is an explanation of this fact to be given? We think so. In the first place it may be that the constitution demands that in his artificial state he should make use of narcotics for the arrest or hastening of certain processes in the system, which, not being thus influenced, might lead to disease or death. Whether this be true or not, it is very certain that the active principles of tea and coffee are powerful poisons, as well as alcohol. With regard to these things it has been recently shown that they act medicinally on the system—that they appear to arrest a waste of the tissues which, under certain circumstances, would lead to disease. Why may not an action of this kind be connected with the use of tobacco and a beneficial effect on the system be discovered? We do not contend that such an effect does take place, but it seems to us an explanation of a difficulty in which the tobacco-stoppers must feel involved, that in spite of all their wish to prove tobacco to be a poison it does not poison."

We may add the testimony of Dr. Alexander Macauley, of the Royal College of Surgeons in Edinburgh, in another respect. In relation to tobacco's weakening the digestive powers, he remarks, "Candor obliges us to say that the instances in which it is seen to produce this effect, are much fewer than what we might from theory expect. Thousands of the consumers of tobacco live totally exempt from all dyspeptic symptoms."

A CURIOUS FACT.—We came across, in our examinations of the Report of the U. S. Coast Surveys for 1855, the very singular fact that the sand beach between Fort Point and San José, on the California coast, lies on a bottom of extensive alluvial deposit, resembling a peat-bog or swamp. When the tide is very low, the edge of this peat formation is very distinctly to be seen. Large pieces of the peat are also broken off by the storms and thrown on the top of the beach. "The continuation of the peat," says the report, "is found in the swamp or flat meadow land which lies inside of this belt of sand, and between it and the base of the sandstone hills," and adds: "It is very difficult to account for the formation of this swamp under conditions like those at present existing. A strong current is strongly settling back and forth through the channel, and the action of the serf constantly undermines and encroaches upon the beach, so that the present action is destructive, and the swamp could not possibly have been formed while the Gate was open, as we we now find it."

A similar peat swamp is found in the shore of Mission Bay, underlying the beach, between Rincon Point and San Quentin, and is believed to extend under a part of Happy Valley.—[Sac. Bee.

VIVIPAROUS FISH.—The editor of the Marysville Herald claims having discovered viviparous fish in our waters. He says:

Early in 1850 we discovered the phenomenon above mentioned, and drew the attention of the younger Audubon, son of the ornithologist, thereto, who expressed the greatest surprise that fish not belonging to the mammalio should bring forth young in a living state. We procured several specimens from San Francisco Bay, and forwarded them to Prof. Agassiz, at Cambridge. Whether the great naturalist received them or not we cannot with confidence assert, but nearly two years subsequent to this time, a Professor Jackson, who had visited California, created considerable stir among scientific circles in the Atlantic States, by announcing that he had discovered viviparous fish near Saucelito, in the bay of San Francisco, and if our memory serves us, Agassiz, when the matter was brought to his notice, made it the subject of a lecture, in which he announced that two years prior to Jackson's alleged discovery, viviparous fish had been exhibited to him by a returned Californian.

AN OBEDIENT YOUTH.—Some time during the last year, a young sprig of the law was admitted to the bar. His father, a prudent old codger, gave him a hundred dollars to purchase a library of books, and told, him that was all he could do for him at that time, but that with industry, prudence and immediate enforcement of all sums that might be his due, he had no doubt he would get along.

A few days after, the old man dropped into John's office and borrowed fifteen dollars of the money he had given him, promising to pay it by twelve o'clock the next day.

"All right, dad," says John, "give me your memorandum."

The next day at twelve, pa did not appear, and John immediately served a writ upon him, and put a keeper in his house, just as the old man was sitting down to dinner.

THE most northern point reached by Bayard Taylor (who returned to Stockholm about the middle of February from his winter tour in Lapland) and his companions was Kautokrino, in Finmark, sixty-nine degrees north latitude. They traveled in Lapland costume, on sleds drawn by reindeer, and were objects of great interest with the natives, as Taylor was the first American seen in those parts. The adventurers found the intense cold easier to bear than they expected. For six days of the journey they rode with the thermometer at forty degrees below zero. Mr. Taylor was in excellent health on his return to Stockholm.

THERE are two reasons why you should not disturb an editor when he is writing. One is that it is very apt to put him out, and the other is that you might get put out yourself, especially if he has got thick boots on.

AN Irish drummer, who now and then indulged in a noggin of right good potteen, was accosted by the Reviewing General: "Pat, what makes your nose so red?" "Plase your honor," said Pat, "I always blush when I spakes to an officer."

ATTEND to your business; never trust to another. "A pot that belongs to many is ill-stirred and worse boiled."

HOTELS, &c.

MAGNOLIA HOUSE,

v6-1 Proprietor.

Hayward's Hotel,
Five Miles from San Leandro, near the Castro Ranch.

THE Proprietor of the above Hotel takes pleasure in calling the attention of his patrons to his house at the present time. Having taken some pains to newly finish and furnish his house and prepare it for the traveling public, he feels confident he can offer a pleasant and comfortable "home" [illegible] the traveler, or for any one that wishes to spend the sur[illegible]eason in one of the finest valleys of the State.
The location is one of [illegible] most healthy and delightful spots in Alameda county. Situated upon a commanding eminence, it presents a magnificent view of one of the most beautiful and highly cultivated valleys of California, and opens the prospect to the bay and harbor of San Francisco, and the country around for many leagues.
The Proprietor has spared no pains or expense to fit and furnish his rooms in a style having reference to neatness and cleanliness and comfort. These he feels confident will be approved; and every effort will be made to have the table and and every other department subserve the pleasure of his patrons.
A good Stable is attached to the house. Horses in saddle or harness can be furnished for the pleasantest road scenes in in the country—the Springs, the Mission Gardens, the Fishing Grounds, and other places, furnishing abundant sources of amusement for the benefit of invalids or persons desiring recreation and pleasure.
☞ The patronage of the public is solicited. v7-18 3m

Estudillo House,
SAN LEANDRO, Alameda County.

THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.
To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.
San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.
The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.
THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid.* Description and directions for culture furnished with each package.
NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.
Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.
Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

SEEDS.
HOVEY & CO.,
DEALERS IN SEEDS,
No. 7 Merchant's Row, Boston, Mass,
ARE now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable Seeds are requested to forward their orders early.
Seeds packed securely for California or any other part of the country.
Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.
Catalogues sent gratis on application.
☞ Remittances must accompany orders. v6-19

New Flower Seeds.
A superior lot of very choice Flower Seeds—many rare kinds—just received from a Boston house. Persons wishing any of them can procure them by calling at our Office, 130 Washington street, San Francisco; or address by letter marked "Seed Order," and it will be promptly attended to. [7-11] WARREN & CO.,

Sugar Beet Seed.
WE have received a lot of very superior French Sugar Beet Seed. It is of extra quality, new and fresh, and imported expressly for trials of beet raising for sugar making.
Persons who desire a superior article can order by express, and the seed will be carefully forwarded. Such orders should be addressed to our office at San Francisco, superscribed "Seed Order." [v7-11] WARREN & CO.

Garden, Ornamental and Forest Tree Seed.
A VERY choice assortment, selected by Messrs Thorburn & Co., of New York, with great care, expressly for BRYANT & CO.,
v7-6 2m 68 Battery street.

Hemp Seed.
SUPERIOR Hemp Seed, just received. No country in the world can surpass California in the production of this article.
For sale at our Office 130 Washington street, San Francisco,
v7-11 WARREN & CO.

Seed of the Great Tree.
A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the CALIFORNIA FARMER. v5-13

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of
Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants
to be found in any one establishment on the Pacific Coast.
Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.
FRUIT TREES—fine, vigorous, and in every variety of the following:
Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.
ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.
Among the fine Trees are the following varieties:
Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.
Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.
We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.
ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.
Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.
GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.
☞ Catalogues furnished to applicants.
Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.
We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.
Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.
☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.
v6-19 3m A. P. S.

[PREMIUM MANUFACTORY.]
Hudson's Golden California Mustard.
THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.
The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.
For any further information regarding this Mustard, we refer to the principal business houses in this city.
Purchases at wholesale or retail are specially invited to call at the office,
22 Front street, corner of Pine,
H. C. HUDSON.
P. S.—The highest price always paid for pure A No 1 Mustard Seed. v6-20 3m

Spermatorrhea can be Cured!
THE GREAT RUSSIAN REMEDY!
THIS unparalleled specific for the above fearful complaint, recommended by the Medical Societies of Berlin, Paris and Vienna, and by Dr. Andrew Ure, of London, has recently been imported by the agent of Johannesburgh & Co., the manufacturers, and is now for sale in San Francisco. A cure is guaranteed in from three to fifteen days, even when paralysis has taken place. Address Box 14, San Francisco Post Office, inclosing $10, when sufficient will be sent for a perfect cure; and the harrowed mind of the almost lunatic victim of passion put to rest. We have also half packages at $5—they will be put up carefully and sent per express, free from detection. JOHANNESBURGH & CO.,
v7-14 Vallejo street, bet. Stockton and Dupont.

Cordage Manufactory.
WE now have our ROPE WALK in operation, and are manufacturing CORDAGE of the best quality from
Pure Hemp, direct from Manila,
and have constantly on hand
MANILA ROPE OF ALL SIZES;
Also,
BALE ROPE and WHALE LINE.
v7-8 3m **TUBBS & CO., 139 Front street.**

The California Farmer.

SAN FRANCISCO, FRIDAY, MAY 29, 1857.

The California State Agricultural Society's Exhibition Rooms are at the Halls on Fourth street, between J and K, City of Sacramento, where all are invited free.

Letters and Exchanges.

Our correspondents are kindly requested to direct all letters to us at our principal office, San Francisco.

Those journals and periodicals with whom we exchange will much oblige us if they will be particular to note this, so that we may be in receipt of their favors at the earliest date. Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco.

Our Trip up the Sacramento.

Our last note on this route was from the coal mine which we visited, and of which we spoke as giving much promise and situated some seven miles above Oroville. From this point we passed on over a wide-extended prairie, here and there dotted with settlers, and often fine fields of grain. As it was about five P. M. before we left the mines, and having some thirty miles to ride in saddle before we should rest for the night, we could give but short calls; several of which were to note the grain fields and stock, of which we saw both, and much of interest besides; our aim being to reach the well-known Bidwell's Ranch, which stands out so prominent among the cultivated spots in this section of country.

Our ride in the saddle was rather a lonely one after dusk, although a pleasant one, noting as we did the evidences of increase of stock-raising and cultivation on our way. We were so much engaged in observation that we came short of our intended stopping place for the night, and tarried some five miles short of Bidwell's. After a comfortable night's rest we rose very early, and enjoyed a morning's ride from this spot through the beautiful groves of oaks to Bidwell's. The whole vicinity of Bidwell's, for leagues around, opens to your view in beautiful groups of oaks, and reminds one of the groves of oaks around the home of the "Sage of Ashland," near Lexington, Kentucky. The grass beneath the oaks around Bidwell's was rich and luxuriant, affording excellent feed, and the herds of stock and the many other signs of settlement gave to the scene so pleasing and picturesque a view that we could not but admire.

We reached Bidwell's Ranch early in the morning, and as we approached we were well convinced we should be repaid for any effort we had made to visit so charming a spot as

BIDWELL'S RANCH.

This beautiful Ranch is approached through a thick forest of majestic oaks, and as you enter upon the borders of the claim you notice improvement, and this continues until you are brought to the heart of the Ranch—the residence of one who has labored well, and labored successfully, to make a beautiful home in one of the most beautiful spots in this region of country. Nature has done much for the Bidwell grant; but the eye, the hand, and the liberal heart, aided by an excellent taste and a generous mind, has done more; and thus nature has been judiciously aided, and an Eden spot has sprung into existence in this evergreen forest on the upper Sacramento. We were a stranger here, it being our first visit. We regretted the absence of the noble proprietor, but were soon "at home," and by the courtesy of the brother of Major B., and another friend whom we found in Mr. Schenck, the attentive *Charge d'Affaires* at Bidwell's. After a generous collation, most kindly set before us, of all the good things of a good ranch, we commenced our observation.

Major Bidwell has 350 acres under cultivation, three hundred of which is in grain—wheat, barley, and oats. Fifty acres is devoted to orchards, garden and grounds around the residence.

It was indeed a luxury to roam through these well-cultivated grounds in this far-away up-river country. How few of the denizens of our cities have any conception of the wonderful beauty of California in her prairie and valley homes, and in the gorgeous scenery that opens to view as you pass from mountain to mountain, and look down into the rich vales that are cultivated between them, each spot being an Eden of itself.

We first entered the peach orchard. Here we saw three hundred very large, thrifty, and fully loaded peach trees; as large trees as there probably can be found in our State, and giving promise of a very heavy crop; a handsome collection of foreign grapes, giving much promise; fig trees of three years' growth, that measured twenty-three inches in circumference, and eighteen feet high, loaded with fruit—some to be ripe in one week (this was three weeks since), and we were informed that these trees gave *three crops a year*. Almond trees, quinces, pears, apples, plums, and cherries, of all the best kinds, were in admirable growth and promise. A vineyard of 2500 Los Angeles grape-vines, and a Catawba vineyard of 2000, were in splendid condition, and would yield handsomely. An extra orchard of 500 dwarf pears denoted extra care and attention; a fine apple orchard also. Groups of ornamental trees dotted the grounds—Pride of China, Locusts, English Walnuts, &c. Strawberries were ripe on the 9th of April—variety, British Queen. We noted frames of early cucumbers, and some of the prize kind, from England; among them the St. George, two and a half feet long.

The entire garden and grounds were in most excellent order, and well cared for. We much liked the plan of irrigation; far preferable to the miserable one we so often see. Most persons pour the water in solid column round the tree. These orchards were copiously watered by neatly cut trenches between the rows of trees, the water running three feet distant; thus going down to the roots of the tree, where it is wanted. The whole place denoted skillful care, and we found an excellent and well-educated gardener in charge. His work gave evidence of his worth. We regret we lost the name of the gardener—*but his works praise him.*

We could but admire the fine barns at Bidwell's, seventy-five feet by thirty, admirably arranged for the care of stock. The stock upon the ranch consists of 500 horses and brood mares, 500 horned cattle, 500 Asiatic sheep, and other needed dairy stock, swine, &c. All the stock were in most excellent order. We were shown the flock of sheep by Mr. Barber, who gave us many facts of value. Mr. B. had carcasses of mutton, from the flock, of 126 pounds, and of superior quality. We witnessed the branding of stock—an interesting spectacle.

There are fifty Indians attached to Bidwell's Ranch, and all trained. A very excellent brick house is erected for their comfort, and they fare well. A large triangle is used to call the Indians; one stroke upon it calls the first garden boys; two strokes calls the second garden boys; three strokes calls Indian boys.

A fine mill belongs to Bidwell also, furnished with two run of stone, grinding one hundred bushels grain per day; could do much more—this is the average. They use the French burr stone, and Ingham's smut mill. They have flour for sale; price $8 and $7 50 per 100 pounds. Chas. Wade, Esq., the miller, most kindly gave us time, and courtesy, and showed us over the mill; and the order and neatness were explained to us as we saw a handsome vase of beautiful flowers upon his table. Mr. W. is from England; educated as one should be for his business.

We visited the Post-office building near by, kept by a brother of Major Bidwell. Over the Post-office, and store which is kept here, is a new Masonic Hall, where a happy Mayday Festival was held.

We shall long remember our visit to Bidwell's. It was a happy one. The high state of cultivation in which we found it; the liberality in the outlay for gardens, orchards, stables, and other necessary buildings, all gave us an assurance of the liberal mind of the proprietor; but of this we had ample assurance everywhere, from those who had been employed, fed and clothed upon this splendid Ranch, which embraces an area of five leagues of the best land in California; and, we are most happy in saying, owned, cultivated and enjoyed by one of the best of men—a man who labors to encourage the working classes, and build up our glorious State. May prosperity ever attend such!

More Blood Stock.

The Golden Age, just arrived at this port, has brought a fine lot of very valuable stock, to help on the work of improvement in this important branch of our Industry.

Col. T. J. Henley, on his recent visit to the East, selected and purchased some of the best stock that could be found, a portion for the government, to be placed on the Indian Reservations, and the balance for private use.

The following are among those brought by this steamer:

Seven fine Southdown Bucks and Ewes.
Two fine Devon Bulls, the first yet imported.
And four Jacks of superior stock.

The following is the pedigree of the stock imported by Col. Henley, mentioned above:

One of the large Jacks was sired by Mammoth, the famous Jack of Ashland. Two others from Mammoth also, by second remove. One from Castillian, a celebrated Jack; all of Kentucky raising. Two buck Lambs were sired by Toney, owned by Geo. Hartshorn, Esq., of Rahway, N. J. Three Bucks from P. S. Backus, Esq.'s flock of South Downs, at Louisville, Ky. One Buck from Martin Hutchinson, Esq.'s flock, Bourbon county, Ky. One Buck from stock of Robt. W. Scott, Esq., of Frankfort, Ky.

Mr. Faile furnishes the following certificate of the pedigree of the Devon Bulls:

Pedigree of North Devon yearling Bull Roanoke, sold by me to Mr. J. B. M. Henley, April 29th, 1857:

Roanoke (——), was bred by George Turner, Esq., of Barton, near Exeter, Devonshire, England; of whom I purchased his dam, then carrying him (Roanoke). He was calved on my farm, March 18th, 1856.

Sire Admiral (135), whose dam was Bracelet (43) by Duke of York (37); grand sire Earl of Exeter (38), dam Eveleen (691) by Earl of Exeter (38), g. dam Ruby (1035) by Favorite (43).

EDWARD G. FAILE.

West Farms, Westchester county, N. Y.

Pedigree of yearling North Devon Bull Tioga sold by me to Mr. J. B. M. Henley.

Tioga (——) calved April 27, 1856, bred by me, and sired by my imported bull Exeter (198); grand sire General (50); great grand sire Favorite (43); dam imported cow Jenny (700), by a son of Prince Albert (102); grand dam old Rose.

EDWARD G. FAILE.

West Farms, Westchester Co., N.Y., April 29, 1857.

By request of Mr. Henley, I have had weighed to-day, the sire and dam of Tioga; Exeter weighed 1685 lbs., and Jenny 1165 lbs. They are both in my ordinary. Jenny took the first prize, as best imported cow, at the show of the New York State Agricultural Society, at Elmira, 1855; and first imported or home-bred, there being seventeen entries, at the United States Agricultural Society's show at Boston, in October, 1855, the premium $100. E. G. FAILE.

Winter Keep.—The former has been fed fresh hay morning and evening, and salt hay before him during the day, and in addition half a bushel of beet or turnip roots, with two quarts of shorts sprinkled over them.

Jenny has had hay only. Her tendency to flesh has given me trouble in having her got in calf. E. G. FAILE.

We have had the satisfaction of seeing this stock, as it landed; it arrived in excellent condition, and will prove a valuable acquisition to California. This stock was selected and brought over by the nephew of Col. Henley, who has been educated among stock, and whose experience in selecting stock has been thus well proved.

The fine Devon cow Titania, of which we give a cut in this number, belongs to the herd of Mr. Faile, from which the above mentioned Bulls were selected for Col. Henley.

Such importations do great good to California, and are worth ten thousand times as much as a cargo of goods: the one helps California; the other injures it.

The Crops.

The following article upon the Crops, we clip from the Sacramento Union, of the 26th inst., and shall make but a few brief comments at this time. We feel the full force of the Union's closing remarks wherein it speaks of the *influence* which our opinion would exert, occupying, as we do, a peculiar position in regard to all that appertains to Agriculture. It is because of the influence which our journal would have, that we are chary in what we say; we wish to establish the facts we announce, and yet we have not been very remiss in our duties touching the crops. We have written several articles, and at length, and we have warned the community frequently upon the hue and cry so often raised by speculators about short crops. We believe that California will raise an ample quantity for home consumption, the present year; and we believe she will have over *fifty thousand barrels of flour*, of the old crop, on the 1st of July, to begin the year with.

We find in many counties as fine crops as we have ever seen. Alameda county will have large crops; some growers in this county will have extra crops the present year. We are inclined to place Alameda county as the banner grain county this year. Santa Clara county will give some splendid crops; San Joaquin, all along the Calaveras bottom, can show crops that were never beaten. In our trip up the Sacramento, as far as Bidwell's (of which we speak in another column), along our entire route, our eyes were gladdened with a view that was cheering; and although we hear of short crops, and crops drying up, no harvest, ruin, etc., we can trace the majority of these stories *in the newspapers*, to those who *speculate in that which will be their ruin.*

While we thus speak, we are free to admit that there are many places where the crops will be short—where they will not harvest, even—but the *cause* of this is ascertained. We can see that in a majority of cases, the fault is with the Cultivators, themselves: Poor cultivation, poor seed, too late planting, improper soil for the kind of grain, planting too many seasons upon the same soil, and various other causes, which the Cultivator should have studied out; remembering we are in a new country, a climate differing from all others, and we are demanding of the soil a crop at the season when nature has allotted it a period of rest. There is another reason, that we should particularly mention: many of those who are disappointed in their crops, are those who have depended in a measure upon *volunteer crops*; and we have seen parties who, even this year, expected a second year's volunteer crop. Can such Cultivators be wise men? Do they expect to reap where they have not sowed? But we will not extend our remarks at present; we have been traveling over the State, and it will be expected of us that we should advise our readers upon these subjects, and we intend doing so. Fully, and each week from this time, we shall do what we can, with facts, reliable.

We are pleased to respond to a call from a journal standing so high in the estimation of the public as does the Sacramento Union, and it is from the very fact that the Union has won its way to an enviable name and position by reason of the correctness of all that is found in its columns, that we would be careful in what we say of the crops, publishing only what is true. As a public journal, the Union has no superior; it is hailed over our widely extended State as *the* newspaper for general intelligence. We meet it in the mountains—we find it in the valleys—it is in the hands of the reading masses of California; what a barometer is in the hands of a skillful navigator of the ocean, so is the Union a reliable chronicle for the present state of things and a faithful guide for coming events, and it is with much pleasure we speak thus of a journal that so truly has won a title to public favor.

For the faithful and kindly hint in our duty we return thanks to our cotemporary—the counsel shall not be lost. We would humbly hope to win the same confidence from our patrons, in the sphere of our duties as a journalist for the cause of Agriculture:

Crops.—The present warm weather will soon mature everything in the way of grain which can ever be forced to maturity. A large portion of the Wheat may be considered in a position where it is impossible for the heads ever to fill. A good many fields have already been cut for hay. In the specimens we have examined, the heads look very fair, but upon pressing them between the thumb and finger, not a single kernel of wheat is found to be developed. The head is literally chaff. In this section, wheat must turn out a very short crop. Barley will do better, as it is a hardier and an earlier crop than wheat. But barley will not, in the opinion of the best judges, produce a half crop. There will be a good deal of barley cut this week, in this and adjoining counties.

As the crop question is one in which every Californian is interested, we are surprised at the silence maintained upon the subject by the California Farmer. Its opinions and views upon all subjects connected with Agriculture, are looked for with more or less anxiety. Its position is calculated to give to its views an influence upon matters pertaining to the products of the farm.

Silver Mine on the Plains.—A gentleman of this city informs us that a while ago an old man died in Placerville, leaving in his trunk some sort of mineral substance, which has since proved to be silver ore; twenty-three ounces were extracted from it. Another person recollects where the substance was obtained, and intends going out with a party this summer to make further examination of the place.—[Sacramento Age.

Fire-brick—New Stone for Buildings.

We were shown a piece of stone, by Col. T. J. Henley, which came from the Indian Reservation at Nome Lacke, which we esteem of great value, and which will be found very valuable in many ways for building purposes.

The material is of singular formation, being of a mixture like pepper and salt—a material lighter than chalk, yet perfectly strong, easily cut with an ax, a perfect nonconductor of heat, and possessing many other good qualities.

Millions of tuns can be found at the Reservation. A very little labor with an ax will seam it in blocks, and it opens into any form and size, like a block of ice, and with a handsome face. It can be hewed smooth, as easily as chalk. Experiments have been made at the smith forges at Nome Lacke, and it is found that it resists fire better than the ordinary fire-brick, imported; for while a piece of four inches may be heated to a white heat on one side, the hand can rest on the opposite side. It makes excellent, durable and handsome building material, and being so light, a team can carry as much in bulk of it, as it can of lumber. Here we have another production that will prove valuable, and save the cost of all the fire-brick now imported.

A block of this material has been kindly offered us, which we shall be glad to show, at our office, to all who are interested in such matters.

New Quartz Crusher.

We have examined the machine invented by Mr. Henry Goulding, for Drilling Rock and Crushing Quartz. It is a powerful instrument and worthy attention of all interested. Mr. G. commenced it five years ago, and has been working upon it ever since, so as to improve all its powers.

The machine consists of one drill, attached directly to the piston rod, is worked by compressed air, and gives 250 to 400 blows per minute; the former for drilling, the latter for quartz crushing. The machine is light and portable, can be moved by two men from place to place; the drill being 200 pounds weight, quartz mill and mortars 300 to 350 pounds.

A new amalgamator is also in use, in connection with this crusher, and is of singular but most ingenious construction. These are all operating at the Fulton Foundery of Messrs. *Hinckley, Hyde & Co.* on Davis street, near California; where can also be seen many Quartz Crushers, Messrs. Hinckley, Hyde & Co. being quite celebrated for the manufacture of excellent mills, from a peculiar quality of iron, far superior to that generally used.

Iron Ore.

One after another are developed upon the Pacific shores the evidences of its future prosperity and glory. We have been shown a handsome piece of Iron Ore, brought from the mines recently discovered at Auburn; it yields over eighty per cent, and promises to be abundant. Mr. Lovell, who showed us the sample, came down to this city to take measures for its further development. Although the time has not yet come for a large amount of ore for smelting, yet we hope it is near by. Now we have the material for all our railroad iron, and we need not send for it to the East or Europe. Home manufactures, say we.

Favors Received.—We return our sincere thanks to Hon. J. W. Denver, at Washington, D. C., for *two mail bags* of books for our office and distribution among the friends of agriculture. This act of our able representative at Washington is sure evidence of his watchful care over the great interests of our State.

Thanks to Col. T. J. Henley for samples of the singular and valuable rock formation presented us.

Thanks also to Mr. Lovell for the sample of iron ore given us.

We acknowledge the receipt of papers by the steamer from Mr. Sullivan and Mr. Ullman, to whom we return thanks.

We have been favored with a catalogue of North Devon cattle, which are to be sold at auction, at the Meadows, just above the Rhinebeck station, on the Hudson River, Duchess county, N. Y., on the 17th June next. The list comprises twenty-one lots, eleven cows and ten bulls, all of the highest character. We hope there will be California purchasers present, and that we shall be favored with a portion of the stock here.

Joseph Rassette.—We regret to learn that Mr. Rassette, well known to the public of California as the proprietor of the Rassette House, was to-day forced to succumb to the vicissitudes of fortune, and resigned his property to the hands of his creditors. Mr. Rassette has labored long and arduously against a sea of troubles. The house and lot he has surrendered to those holding mortgages on the same to the amount of $72,000, on which sum during the period of his solvency he had paid over $40,000 interest. Mr. Rassette to-day is an impoverished man—not without friends, however. The last act of his proprietorship entwined his brow with the wreath of honesty. His arrearages to the help in the establishment amounted to about $12,000, and unwilling that those who had so zealously aided him in his endeavors to buffet the world should lose thereby, he executed to them a bill of sale of the entire establishment, which cost fourfold that amount. Surrendering the house, the idol of his hopes for the past six years, to Mr. Trench, Joseph Rassette quitted its walls, without even the necessary comforts of life. All had been sacrificed to satisfy honest debts. Such an example, so foreign to the general custom in California, commends itself to public notice, and the example afforded may prove salutary.—[Town Talk.

We copy the above excellent article from our morning cotemporary, and we add our sympathies also to one who has nobly struggled against a hard fate; but a man like Joseph Rassette cannot long be bowed down by adversity—bright days must come; and if any man on the Pacific Coast deserves prosperity, Joseph Rassette does, and God grant it may yet be enjoyed by him and his excellent lady.

Loss to California.

We call the attention of our readers to the very interesting letter of Ericsson, the distinguished inventor of the new propelling power. We would mention that the loss of the splendid engine destined for Samuel Brannan, Esq., is much to be regretted; but we believe that it will call out new energy and new inventions, and in the end result in much good. It is most gratifying indeed to see such men as Mr. Brannan use their wealth in introducing into the country new inventions that are valuable. Such acts should be better appreciated. If we now remember rightly, this last purchase by Mr. Brannan, of an engine for the mines, was some $5000. The princely gift of the fire engine, the new brick machine, and this present new engine will make a sum of near $25,000, which Mr. Brannan has expended for such works as will directly benefit our State. May success ever attend such acts.

New York, May 4, 1857.

Dear Sir: I regret to inform you that Delmator's boiler works were burnt to the ground last night, and that your engine, which has been completed for some time, now lies buried under the ruins.

I have been waiting for an opportunity of a verbal communication, through an engineering friend, about visiting California, but detained by sickness. The occurrence of last night, of course, demands an immediate communication. Your engine cost upwards of $5,000, being the first one, on a large scale, built on my improved plan. I do not regret this heavy cost, however, as it has enabled me to test the principle fully. The engine was perfect in every way, but did not develop more than one-horse-power per cubic foot of cylinder instead of one and three quarters per cubic foot as estimated. I should ere this have shipped the engine for California at my own risk, but for the fear of creating an unfavorable impression in a country that presents so fair a field for its introduction. When I say unfavorable, I mean in regard to the *size* of the cylinder. A much smaller engine, in the first instance, would have been better calculated to pave the way for the introduction of our safe, dry and fuel-saving motor among the mines of California. In this opinion I am sustained by several intelligent Californians, who deem the machine, even on a small scale, say one doing the work of twenty men, as invaluable among the mines. But I do not wish to thrust my views upon one as competent to judge as yourself.

We are making preparations to manufacture engines of from one to ten-horse-power, for sale within the next three months. All my friends urge me strongly to start moderately, until public confidence is established. There can be no doubt that the large size of the cylinder will not be deemed an objection, when the public are once made practically acquainted with the many advantages and conveniences secured by the new engine. I cannot help thinking, under the circumstances, that our true policy will be to *start* with a small class engine in California. I shall be happy to hear from you by return of mail, and very glad to receive your suggestions on the subject.

Yours truly,
J. Ericsson.

S. Brannan, Esq., San Francisco.

Coffey & Risdon's Boiler Works.—It is most interesting to visit these extensive works. A little cotton in the ear and you *see* better, for the terrible clattering of the rivet hammers at work in the numerous boilers is deafening. The amount of labor done at these works is immense, the largest by far of any in the State. C. & R. use up over $7,000 worth of boiler iron per month. We learned an important fact here which should caution the importers of those foreign articles that can be made here. A celebrated manufactory here was furnished with imported boilers; and after a brief use they were cast aside as worthless, and new boilers from these works supplied their place, and at a saving of $300 per month for fuel. Now had California boilers been used first, $5,000 would have been saved to these owners and to the State also. Here is a lesson for the wise. Remember home manufactures.

Canine Curtailment in Mexico.—The editor of a journal published in the city of Mexico, in view of the practice prevalent in that locality of cutting off the tails of the canine species, indulges in the following eloquent dissertation, which we translate for the benefit of our readers: "What an absurd and barbarious act it is to deprive a dog of his tail! It is, in fact, to cut out his tongue; for a dog speaks much less with his tongue than with his tail. With his tail a dog not only expresses gratitude, as did Fido, but hope, solicitude, courtesy, desire, love, obedience, anger, shame, defiance, fear and gaiety. It is clear, therefore, than in cutting off a dog's tail we deprive him of the organ of speech." We should conclude that after the publication of the above, bob-tailed dogs would become less numerous in the city of the Montezumas.—[Town Talk.

A Fact.—A young lady in Brooklyn, New York, has recently had her leg amputated midway between the hip and knee in consequence of a wound caused by a broken hoop. The hoop was of steel, and in some unaccountable manner a broken point penetrated to the bone. The wound became inflamed, and amputation was thus made necessary. We have the story from a young lady who is a friend of the now crippled-for-life victim of fashion, and can vouch for its authenticity.—[Winstead Herald.

Eggs.—The Farallone egg season has commenced, as we saw the parti-colored fruit in market a day or two ago; price six bits the dozen at retail.

Holloway's Ointment and Pills surpass all other remedies for the cure of Bad Legs, old Sores, and Eruptions of the Skin. They act in unison on the absorbent system; eradicate all poisonous matter from the body, their effect in many cases appearing like a charm.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot or box.

Oxygenated Bitters.—This remedy for Dyspepsia, which astonishes all who have used it, by its instantaneous and almost miraculous effect, has obtained a distinction and popularity beyond any medicine we have ever known.

To our Subscribers.

We ask the kind consideration of our subscribers for any irregularities they may have experienced in receiving their papers for the last three weeks. Owing to the indisposition of one who had charge of the mailing of the papers, and consequent absence, some delays and omissions may have occurred; and our last issue, some may have received two copies of the same number, one from each office—if so, they will please mail them to some of their friends, and it will serve to make known the Premiums of the coming Fair, and thus do much good.

Any subscribers not receiving their papers regularly, will please notify us, and they shall be promptly corrected.

Our subscribers at Napa, that have heretofore received their papers through the Express office of Wells, Fargo & Co. at their office, will hereafter find them at the Post Office,—where we shall duly and regularly mail them. Those not receiving their papers, will please notify us, that we may correct.

Our Stockton friends and subscribers will find their papers at the Bookstore of Messrs. Rosenbaum & Van Allen, whose spacious and well filled Book and Stationery store will give them a fine opportunity when visiting it for their papers, to examine the new and varied stock of this firm. Messrs. Rosenbaum & Van Allen are agents for the FARMER, to whom we refer all who would like to receive our journal.

We cannot omit to state here, that we hope to receive a generous aid to our subscription list from the citizens of Stockton, as the State Fair to be holden there this fall will accomplish so much for them—and we shall make it our first duty to lay before Stocktonians all the particulars of this Fair, so they may be prepared for it.

TO OUR READERS AND CORRESPONDENTS. We are able to lay before our readers an interesting letter from our valued correspondent B., being the first of a series of Sketches which we are happy to announce will be regularly continued.

Florence Percey will be found the present week in our columns, both in prose and poetry, and we believe will be perused by our readers with much pleasure.

We regret that an omission occurred the last week, in printing the beautiful lines of Florence Percey, entitled "Come Home,"—one stanzas being left out. We shall republish the piece, entire, as an act of justice to the accomplished writer.

Some advertisements, and several articles, are necessarily omitted.

NICARAGUA.—The Aspinwall Courier of May 3th, states, that the news from Greytown is gleaned from a number of quarters—Costa Ricans, Leonese, Granadians, Chamoristers, etc., and therefore scarcely reliable.

The stories are that Walker still held out up to the 26th (April), that he had had two battles, and that he was much reduced in provisions, but still had between four and five hundred men.

The New Orleans Creole of April 24th, says: The movement is in progres which cannot fail to secure the final triumph of the cause of Gen. Walker in Nicaragua. Within one month one thousand men will be in San Juan, determined to reopen the route across the country to the Pacific, now closed by the Costa Rican forces. It is a commercial as well as a colonizing movement. The Texns will sail from Charleston between the 1st and 15th of May, with five hundred emigrants, and before that time a much larger number will leave the city.

EUROPEAN NEWS.—The latest dates from Europe are to the 22d April. The intelligence is rather important. The amended Dallas-Clarendon treaty is made the subject of editorial comment in the London Post, Lord Palmerston's organ. The alterations made by the United States Senate are regarded as highly important, even vitally so, and are looked upon as a fresh concession made to the slave power by our government, but the writer does not assert that the British Cabinet will reject the treaty notwithstanding.

Queen Victoria was comfortably delivered of a Princess—her ninth child—on the 14th April.

The war in Central America, the Cuban slave trade, the foreign policy of Mr. Buchanan, and the decision of our Supreme Court in the Dred Scott case, engaged much public attention, both in England and France.

Advices from Madrid state that the difficulty with Mexico stands a chance of being pacifically arranged.

BOOKS FOR GARDENERS.

JUST received, at the office of the FARMER, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

SPECIAL NOTICES.

☞ **ALAMEDA COUNTY AGRICULTURAL SOCIETY.**—The Committee appointed at a primary meeting of the farmers of Alameda County, to draft a Constitution and By-Laws for the organization of an Agricultural Society, having notified the undersigned that they are prepared to submit the result of their labors, notice is hereby given that a meeting will be held at the ESTUDILLO HOUSE, in San Leandro, on SATURDAY EVENING, June 6th, at 7 o'clock, to hear said report and take action thereon.

A general meeting and punctual attendance of farmers and others interested is most respectfully requested.

HENRY SMITH,
Chairman of Primary Meeting.
San Leandro, Alameda County, May 28, 1857. v7-20 2t

☞ **WHAT CHEER HOUSE,**
MAY 27TH, 1857.

CITY AND COUNTY OF SAN FRANCISCO, } ss.
State of California, }

KNOW all People by these presents that R. B. WOODWARD, Proprietor of the above named establishment, hereby announces that from and after this date his scale of prices shall be as following reduced rates to wit:

BOARD, Per Week, SIX DOLLARS.
BOARD, Per Day, ONE DOLLAR.
MEALS, FIFTY CENTS Each.
LODGINGS, Per Night, FIFTY AND SEVENTY-FIVE CTS.

French Patent Spring Beds, with best of Curled Hair Mattresses, Clean Bedding, &c., has gained a lasting and world-wide notoriety for the superior and celebrated Lodgings to be had at the What Cheer House.

In addition to the above, there is also a spacious Reading Room (well supplied with papers from all parts) in connection with the extensive Library of over two thousand volumes of the choicest selection of standard works.

Determined and untiring efforts to please and furnish the very best of fare at the lowest prices, backed up by a rigid adherence to the *cash system*, has made the What Cheer House the best and most popular establishment on the Pacific Coast, for which the public will please to accept the thanks of

R. B. WOODWARD, Proprietor.
Nos. 119 and 121 Sacramento street; and
Nos. 87, 89 and 91 (new addition), Leidesdorff street. v7-20

Fine, beautiful hair—jet black or brown;
Or tresses, curling and golden—
Is the certain result—without chance or doubt—
Of the use of LYON'S KATHAIRON.

The immense sale of **LYON'S KATHAIRON**—nearly 1,000,000 bottles per year—proves its excellence and universal popularity. It restores the Hair after it has fallen out, invigorates and beautifies it—making it soft, curly and glossy—cleanses it from all Scurf and Dandruff, and imparts to it a delightful perfume. The Ladies universally pronounce it the finest and most agreeable article ever used. Sold by all dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
60 Liberty street, New York.
PARK & WHITE, Wholesale Dealers, San Francisco. 20-1m

☞ **RAT-ROACHES—BED BUGS, &c.**—The *London Quarterly Review*,
The *New York Daily State Register*, and others on
"COSTAR'S" Rat, Roach, &c., EXTERMINATOR,
"COSTAR'S" Bed Bug EXTERMINATOR,
"COSTAR'S" ELECTRIC POWDER, for Ants, &c.

The London Quarterly Review contains near a column, and the New York Daily State Register, of April 27th, says: "The French Government does not permit rats to be killed in any other manner except by 'Costar's Rat Exterminator,' which is sold (in this city) at No. 338 Broadway;" and again, in issue of May 1st: "No judicious housekeeper should defer purchasing a supply of this invaluable remedy for clearing their houses of all kinds of vermin. With all confidence we can recommend it as an indispensable article for every family."

The New York Journal, for April, has the following: "'Costar's' Remedies for all domestic pests, such as Rats, Cock-Roaches, Bed Bugs, Ants, Fleas, &c., are said to be invaluable; indeed, we can speak from actual knowledge of their rare merits. The name of 'Costar' is a 'household word' to New Yorkers, and his Depot, No. 338 Broadway, is thronged by thousands daily. As the summmer approaches we advise every one who would be rid of the above named pests, to send and procure a timely supply of the *Exterminator*. Druggists and Dealers also should send their orders early if they would secure a trade in articles for which there is a *constant demand*, and on which a fair profit may be realized."

☞ See advertisement in another column. v7-20 3m

☞ **OXYGENATED BITTERS**—*A Sure Cure for Dyspepsia.*—The history of this remarkable medicine, and its astonishing success in obstinate cases of DYSPEPSIA, ASTHMA, AND GENERAL DEBILITY OF THE SYSTEM, places it among the most wonderful discoveries in medical science, and has given it a reputation far beyond any remedy known for these complaints, in all their various forms.

The *Oxygenated Bitters* contain nothing which can intoxicate; and the medicine has no similarity whatever to the various alcoholic mixtures disguised as "Bitters," being purely a medicinal compound, in which are combined the most valuable remedial agents, and a peculiar oxygenated property, hitherto unknown, but highly efficacious in all complaints arising from weakness and derangement, or prostration of the stomach and system generally. It is a mild and agreeable tonic, removing all disagreeable symptoms, and assisting nature in her efforts to restore the impaired powers of the system.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORALL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 20-1m

---

☞ **JOSEPH GILLOTT'S STEEL PENS.**—These popular Pens are to be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Thirty years' experience in the manufacture will, it is hoped, be a sufficient guarantee that every effort will be made to maintain the reputation of these articles. Those of *Standard Quality*, only, are allowed to issue from the Manufactory.

Each box contains a warrant, bearing a *fac simile* of Joseph Gillott's signature.

Manufacturer's Warehouse,
91 John street, New York.
HENRY OWEN, Agent. v7-15 3m

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

---

☞ **BEAUTIFUL GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

WARREN & CO.
v7-19

MISCELLANEOUS.

PHALON'S

CHEMICAL HAIR INVIGORATOR.
The most complete article of the kind ever before offered to the public. It has stood the test of twenty years in this county, and not one of the many hundreds of imitations have been able to compete with it for preserving, dressing, and beautifying the hair, and keeping the head clear from dandruff, &c. It is inestimable; in short it is everything the hair requires. Price, 50 cents and $1.

PHALON'S
PAPHIAN LOTION,
OR FLORAL BEAUTIFIER.
A great cosmetic for beautifying the skin and complexion, and for curing chapped hands, face, lips, tan, sunburn, freckles, pimples, scalds, burns, &c. A sure and safe cure for the piles—one washing will give instant relief. After shaving, it is very soothing to the skin. It keeps the hands soft and white, and for inflammations of the skin it will be found to be a great remedy. Price, One Dollar per bottle. Made and sold by E. PHALON.

PHALON'S
MAGIC HAIR DYE.
One of the very best natural dyes in the world. Its long use has proved it to be beyond comparison; and being a vegetable production, no injury can possibly be done to the skin. It is easily applied, and you can obtain a black or a brown which will defy the best judges to tell it from nature itself. Price $1 and $1 50 per box. Made and sold by E. PHALON, at 197 Broadway, corner of Dey street, and 517 Broadway, St. Nicholas Hotel, New York, and all Druggists and Fancy Stores throughout the United States.

HENRY JOHNSON & CO., AGENTS, San Francisco;
S. T. WATTS & CO., " Marysville;
R. H. McDONALD & CO., " Sacramento;
And by Druggists generally. v7-20

"Costar's" Rat Exterminator.

AN infallible destroyer of RATS, MICE, ANTS, GROUND MICE, MOLES, &c., &c., &c. (Not dangerous to the Human Family.) Rats do not die in holes, but come out and die.

Ladies' Department.

[For the California Farmer.]

TO ——.

When wert thou with me last?
Ah! long ago it was in a sweet dream,
So bright, that wakening, I could not believe
That years had passed,
Since first I saw thy form, in youth's rich bloom,
Ere thou wert borne unto the silent tomb.

Yet have I dreamed of thee—
Dreamed thou wert still, as of old, by my side;
Trusting and gentle, thou didst then confide
Thy every thought to me—
So true, so life-like, to my heart it seemed,
I scarce could think, when waking, I had dreamed.

But gone is the vision—gone,
And oh! I know full well, the dream is o'er,
That I shall see thee—never—never more;
For thou art dead—and I'm alone—
At that thought, bitterly I weep for thee
Although, if here, thou wouldst be lost to me.

Perhaps thou didst not feel
That thy falsehood had all my ruin made;
Didst not know how dreary and dark the shade
That o'er my heart did steal
When first I knew that thou wert false to me,
And those I reverenced had spoken truth of thee.

FLORENCE PERCEY.

HE'S COMING.

[The following very beautiful lines we copy from the Louisville Journal, a paper distinguished for sweet poetry. This heart-strain is from the pen of Maggie C. Higby, and is most appropriate as an answer to the call of "Florence Percey," which appeared in our last week's issue, entitled "Come Home,"—a strain equally beautiful:]

He's coming, the blushing roses
Whisper it low to me,
And the starlight hastens with it,
Over the twilight sea.
All trembling the zephyrs tell me,
On light wings hurrying past,
And my own heart quickly beating,
Coming, coming, at last.

The soft-lipped waves of the ocean,
Gathering at thy feet,
Breeze-borne from the coral islands,
Murmur the secret sweet,
There's not a dew-steeped blossom,
Or glistening orange tree,
But turneth its leaves, glee-laden,
To breathe this joy to me.

List! that is the sound of rowing
Stealing along the air,
I must gather round my temples
This weight of braided hair;
And trust to the growing darkness,
And evening shadows dim,
To hide with their wings the traces
Of tears I've shed for him.

[For the California Farmer.]

A Bark at Sea.

"Oh swiftly glides the bonnie boat,"

O'ER the dark blue sea comes a fair sight. The white sails set, and o'er the bow the glorious main expanding. Gaily curl the waves as she gently skims the waters, bearing into port a little world of her own. 'Tis pleasant to hear the boatswain's cheering cry, and see 'midst the crowd, that circle of merry sailors stand—thoughtless, as if on terra firma, and not upon the treacherous deep. They shout with freedom and glee, envying not those with their fair homes on land; but thinking, very likely, that the lads may sigh on shore, and believe—such they are willing to accept as their fate when they return to land—but in the meantime gaily they sing and reck not of the morrow. Such is the scene we witnessed as the stately vessel glided unto the shore. Loud is the tumult on land, as the sound of the measured oar is echoed back across the waters. And now the cable merrily rings; the sails are furled—hail to the happy shout! the friendly greeting, as upon the shore they leap! while hand grasps hand, and the anxious question, that brings a quick reply, is asked. Now the joyful news has spread; crowds gather round; nothing is heard save the hum of voices—and amid the tumult comes woman's gentler, anxious tone, breathing the blessed names of husband, friends—asking, not of their success, but if they are safe: "Shall we ever see them more? Are they happy? Are they well?" Such are the trembling questions asked. Oh, let them come forward and chase the sad doubt from eyes that will overflow with glad surprise. We will not doubt this joy which blesses our coming—'t is cheering, though brief. Again there is a throng gathered on shore, and on the vessel's deck; but ah! how different the scene! Now the soul sickens with the thought that in a few hours that vessel will be bounding o'er the heaving wave—fast, fast receding from view—perhaps never to be seen again. Now, instead of joyful smiles, are gathered tears; lips trembling with distress; cheeks pale, which but a short time ago were wreathed with smiles. Now the hurried partings that seem to press from out each heart its very life-blood; choking sighs, that leave depicted upon each countenance, despair. Oh! who can guess if ever those eyes shall meet again? Some may meet again, and often; but others will meet no more. So it is; we meet once in the brief journey of life, and gaze upon each other's face, then seen not again—till at that general resurrection where all shall meet. Some meet on the broad ocean of time, like ships at sea, crossing each other once; then, by the winds borne to far distant parts, or, may be, in the dark, deep waters buried. Again, some meet, like two bright stars, gladdening each other on their way, then parting with joyful smiles. Others, like dark, heavy clouds, made sorrowful by the winds of adversity, and parting in tears. But all part, never again to meet in the same assembly.

FLORENCE PERCY.

The attention of a beautiful little girl being called to a rosebush, on whose topmost step the eldest rose was fading, but below and around which three beautiful crimson buds were just unfolding their charms, she artlessly exclaimed to her brother: "See, Willie, these little buds have just awakened to kiss their mother before she dies."

Common Sense in Home Affairs.

BY MRS. METTA VICTORIA VICTOR.

I have sometimes thought that there were some people who never did exercise *common* sense; and though I have met many men whose aping after follies made them little less than apes, yet I confess it with mortification that it is among the women I have found the greatest lack of the wisdom which makes home what it should be, and life what it should be, and the heart what it should be. Drop down in the midst of any little circle, where, apparently, is much real worth and exercise of truth, and observe for yourself, O reader!

Here is Mrs. ——, a quiet, sweet little body, whose health is quite gone. She is still working, still ambitious—for what? For *position;* for living as well as her neighbor of the stone house! and in this reckless race she has sacrificed the dearest boon God gave to her—health. No use for her to say, "others did it," "my husband expected it," "my children would not have been noticed without it," for none of these excuses suffice for a positive sacrifice of happiness, a real suicide. *Common* sense would dictate no sacrifice of life-treasures upon the shrine of common usage; but would rather dictate such prudential steps as would not have compromised body-comfort and soul-culture.

There is Mrs. ——, a gay, lightly stepping creature, the very personification of rosy health and life enjoyment. But, be not hasty in conclusions. She has a home and a husband and children; but that home lacks the quiet air and exquisite presence which renders it what it should be—a paradise in miniature; and the husband is just as happy in his counting-room as at his fireside; and the children think little else than of the dresses to wear, the day to spend, and the party at night. There is, to the close observer, an almost total want of soul-culture in that home; and the gayety of the mother is won at the expense of the truer happiness of her husband, the nobler aspirations of her children, and the higher sphere of her own usefulness.

And then there is Miss ——, who you would think is pursuing the true life, by avoiding vain show, parties—who practices economy and a modest style in all things; she, you think, is endowed with the rare virtue of doing what she knows to be right. It may be, but not in its fullest degree; she does not realise that life is given for accomplishment—that a true happiness consists in developing all her mental treasures to their utmost; and therefore, with all her well meaning, she is not exercising the common sense which God has endowed her with, when she passes through years of comparative listlessness and ease.

So on through the calendar—we might enumerate the positive faults of our sex. It may be the other sex have as many, or more short-comings; but it is no excuse for us, who are to be the mothers of a race, and who should be the ornament of society. A true life consists in first rendering a home joyous, well-ordered, beautiful, and all in it and around it perfectly *at home;* second, in the practice of such thoughts and feelings as tend to harmonise, instead of dividing society; so that *all* may be friends who are good and respectable, without regard to their wealth; third, in so endowing the mind by study and reflection, as to render its converse one of intelligence and usefulness, and its tastes elevated. When women learn to *practice* such common sense, this life will not have so many sad records to write, and so many obstacles to overcome in reaching Heaven. [Ohio Cultivator,

Married Politeness.

There is much of truth, as well as of that kind of philosophy which comes into every-day requisition, helping to strengthen and brighten the ties of social affection, in the subjoined brief article:

"Will you?" asked a pleasant voice.

And the husband answered, "Yes, my dear, with pleasure."

It was quietly, but heartily said; the tone, the manner, the look, were perfectly natural and very affectionate. We thought, how pleasant that courteous reply; how gratifying it must be to the wife. Many husbands of ten years' experience are ready enough with the courtesies of politeness to the *young* ladies of their acquaintance, while they speak with abruptness to the wife, and do many rude little things without considering them worth an apology. The stranger, whom they may have seen but yesterday, is listened to with deference, and although the subject may not be of the most pleasant nature, with a ready smile, while the poor wife, if she relate a domestic grievance, is snubbed, or listened to with ill-concealed impatience. O! how wrong this is—all wrong.

Does she urge some request? "Oh, don't bother me!" cries her gracious lord and master. Does she ask for necessary funds for Susy's shoes or Tommy's hat? "Seems to me you are always wanting money!" is the handsomest retort. Is any little extra demanded by his masculine appetite, it is ordered, not requested. "Look here, I want you to do so and so; just see that it's done;" and off marches Mr. Boor, with a bow and a smile of gentlemanly polish and friendly sweetness for every casual acquaintance he may chance to recognize.

When we meet with such thoughtlessness and coarseness, our thoughts revert to the kind voice and gentle manner of the friend who said, "Yes, my dear, with pleasure." "I beg your pardon," comes as readily to his lips, when by any little awkwardness he has disconcerted her, as it would in the presence of the most fashionable stickler for etiquette. This is because he is a thorough gentleman, who thinks his wife in all things entitled to precedence. He loves her best; why should he hesitate to show it, not in sickly, maudlin attentions, but in prefering her pleasure, and honoring her in public as well as private. He knows her worth, why should he hesitate to attest it? "And her husband he praised her," saith holy writ; not by fulsome adulation, not by pushing her charms into notice, but by speaking, as opportunity occurs, in a manly way, of her virtues. Though words may seem little things, and slight attentions almost valueless, yet, depend upon it they keep the flame bright, especially if they are natural. The children grow up in a better moral atmosphere, and learn to respect their parents, as they see them respecting each other. Many a boy takes advantage of a mother he loves, because he sees often the rudeness of his father. Insensibly he gathers to his bosom the same habits and the thoughts and feelings they engender, and in his turn becomes the petty tyrant. Only his mother, why should he thank her? father never does. Thus the home becomes the seat of disorder and unhappiness. Only for strangers are kind words expressed, and hypocrites go out from the hearth-stone fully prepared to render justice, benevolence, and politeness to any one and every one but those who have the justest claims. Ah! give us the kind glance, the happy homestead, the smiling wife and courteous children of the friend who said so pleasantly, "Yes, my dear, with pleasure."

Healthy Women—Lessons in Housekeeping.

Under this heading "Sarah" gives in the Ohio Cultivator some sensible ideas:

"As I think I have found a remedy for the nervous headace that the ladies of America complain so much of, I will inform you, and you may put it in your paper if you see fit. I think that if they would rise early in the morning, take a good wash in cold water—do not warm it—then take the milk pail on their arm, sally out to the barnyard, milk some half dozen cows, then get their own breakfast, and take cold water instead of tea and coffee, they would not be troubled so much with the nervous headache. I also think that mothers should let their little daughters run out of doors and romp and play, and their big daughters skate and slide, as Annie was telling about. I think, too, that it would be much better for the country housewives, if they would learn their girls to make light bread, instead of learning them to play on the piano. To be sure, it would be well enough to learn them to play on the piano, but learn them to work first. For my part, I have a mother that believes in raising girls to help her, and not to sit in the parlor for her to wait upon. She learned me to make light bread and johnny cake in preference to playing on the piano, and I thank her for it. My mother made considerable cheese last summer, and I took some lessons in that line. She would stand by and tell me just how hot to have it. If it was not just so many degrees above zero, it would not come and make good cheese. Moreover her health was failing, and she wanted me to help her; and as I have the most of the work to do now, and there are ten in the family, you may know that I do not sit still much of the time."

Mothers.—By the quiet fireside of home, the true mother in the midst of her children is sowing as in vases of earth the seeds of plants that shall sometime give to Heaven the fragrance of their blossoms, and whose fruit be a rosary of angelic deeds, the noblest offering that she can make through the ever ascending and ever expanding souls of her children to her Maker. Every word that she utters goes from heart to heart with a power of which she little dreams. Solemn is the thought, but no more solemn to the Christian mother than the thought that every word that falls from her lips, every expression of her countenance, even in the sheltered walk and retirement, may leave an indelible impression upon the young souls around her, and form as it were the underlying strain of that education which peoples Heaven with that celestial being, and gives to the white brow of the angel next to the grace of God its crown of glory.

Fanny Fern is arguing against matrimonial advertisements, and justly says:

"A woman must have first ignored the sweetest attributes of womanhood, have overstepped the last barrier of self-respect who would parley with a stranger on such a topic.

* * * No—never let woman be the wooer, save as the flowers woo with their sweetness; save as the stars woo with their brightness; save as the summer-wind woos, silently unfolding the rose's heart."

A crust of bread, a pitcher of water, a thatched roof and love; there is happiness for you, whether the day be rainy or sunny. It is the heart that makes the home, whether the eye rests on a potato patch or a flower garden. Heart makes the home precious, and it is the only thing that can.

Established in Boston, Mass., in 1841.
This House, which fully sustains its enviable position, is daily receiving large supplies of recently manufactured seasonable Clothing. Dealers, Travelers and resident Citizens will find every thing to meet their demands, at prices defying competition.
Nos. 28, 30, 32, 34, 36 and 38 North street,
BOSTON, Mass. v7-14 3m

To Teamsters and Others.
PATENT ANTI-FRICTION AXLE GREASE.
THE season of internal communication with the mining district having opened, with a prospect of a large hauling business, the subscribers take the opportunity of thanking their numerous customers for the extensive patronage they have experienced for their
Patent Axle Grease
during the last four years, and beg to say that no pains will be spared in its future manufacture to sustain it in the wide reputation it has acquired as the best lubricating medium for Coaches, Wagons, &c., ever introduced into California.
HUCKS & LAMBERT,
Inventors and Sole Manufacturers,
Mellus street, San Francisco.
Note.—One application of the Patent Grease will enable the heaviest teams to perform the longest journey, without requiring to be re-greased on the road; and further, as the Patent Grease works free from coomb or gum, the draft of the horse is very considerably lightened—a great desideratum in a long journey over a heavy road. v7-15 tf

BOOKS, &c.

The Fruit Garden.
By P. Barry,
Of the Mount Hope Nurseries, Rochester, N. Y.
A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the Laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.
HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, The Villa, the Mansion and Cottage. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.
"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*
"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*
"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express*
Copies of either of these books sent by mail (post-paid), for $2, remitted to

Valuable Works
PUBLISHED BY
BLACKIE & SON,
No. 117 Fulton street, New York.
A HISTORY OF THE EARTH AND ANIMATED NATURE. By Oliver Goldsmith. With numerous notes from the works of the most distinguished naturalists. Illustrated by nearly 2,400 figures, of which 230 are beautifully colored. Two vols. large 8vo.
RHIND'S HISTORY OF THE VEGETABLE KINGDOM. Embracing the Physiology, Classification, and the Culture of Plants; with their various uses to Man and the Lower Animals, and their application in the Arts, Manufactures and Domestic Economy. Illustrated by 700 figures engraved on Wood and Steel, of which 100 are elaborately colored. One vol. large 8vo.
THE FARMER'S GUIDE. A Treatise on the Diseases of Horses and Black Cattle, with Instructions for the Management of Breeding Mares and Cows. By James Webb, Veterinary Surgeon.
HOW TO CHOOSE A GOOD MILK COW; or, a Description of all the Marks by which the Milking Qualities of Cows may be Ascertained. With a Supplement on Dairy Cattle, their Qualities, Management and Productive Results, with Hints for Selecting. Illustrated with Engravings.
☞ Samples of the above Books can always be seen at the Office of California Farmer, where Catalogues will also be found. v7-5

The Most Successful and the Best.
NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.
The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.
By Epes Sargent, author of "Standard Speaker," &c.
The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.
The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.
In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.
Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!
Sargent's Standard Speller contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.
Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

v7-6 3m San Francisco, Cal.

Rural Publications.
THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the best Agricultural Paper in the United States." "By far, at the head of the Agricultural Journals of the United States."
THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.
THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp. duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1856 and 1856, same price. Per Dozen, $2, sent post paid.
SPECIMEN NUMBERS
Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to
LUTHER TUCKER & SON, Albany, N. Y.
☞ Subscriptions for any of the above works received at the offices of the Farmer and forwarded v7-6 tf

Ho! There, Everybody! Face the Music and Read!

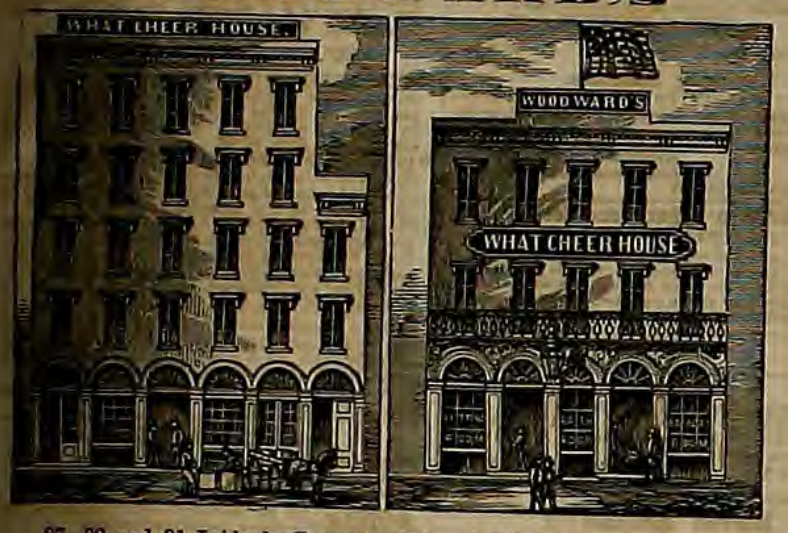
Do you have business of any kind to transact, is it not important that you should endeavor to get as near as possible to where business of all kinds is known to center?

Do you wish to patronize a house conducted on strictly temperance principles?

Do you want to stop at an establishment favorably known throughout California, Oregon, and all other places, for its moderate charges, good tables and best of beds, together with order, comfort, convenience, and superior accommodations?

If you desire all these, we advise you to go to

WOODWARD'S



87, 89 and 91 Leidesdorff street---119 and 121 Sacramento street.

This establishment is centrally located in the principal business part of the city, and in the immediate vicinity of the Steamship Company's Office, the Express Companies Offices, and the United States Branch Mint.

BOARD, per Week, $6. BOARD, per Day, $1. MEALS, 50 cts. LODGINGS, 50 to 75 cts. per Night.

☞ Single Rooms, furnished complete. 75 cents per Night.

☞ Rooms or Lodgings can be had by the Night or Week, with or without board, to suit the convenience of all.

The Beds are fitted up in the very best style, with patent French springs, and the best of curled hair mattresses, clean bedding, &c.

☞ BATHS FREE! ☜

By assiduous attention and untiring efforts to furnish the greatest amount of comfort and convenience at reasonably low prices, the proprietor hopes to merit a continuance of the increasing patronage that the What Cheer House has at present enjoys.

For the accommodation of miners and others having money or valuables, there are two large safes in the office.

There is an extensive Library and Reading Room, well supplied with papers, periodicals, &c.

THE HOUSE IS OPEN ALL NIGHT.

☞ Travelers will please to remember that there are no "Runners" connected with this establishment.

The What Cheer House is conducted on strictly temperance principles.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,

SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

MEDICINES, &c.

J.L. POLHEMUS

DRUGGIST

J. [illegible] St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Builds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots or Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 96 ARCH STREET, Philadelphia, Pa.

For sale by all Druggists in California and elsewhere.

MISCELLANEOUS.

PERSIAN SHERBET,

An Effervescing Temperance Beverage.

The most Wholesome, Refreshing and Invigorating Drink in the World!

THE powder from which this is prepared is made entirely from vegetable ingredients collected from all parts of the world, and combined together with great skill and care. Two tea-spoonsful put into a dry tumbler of large size, with a sufficient quantity of water added, produces immediately a cooling draught of charming excellence and flavor, and health-giving effect; it is adapted to all seasons and every one's use, and is especially suited for those who go to sea, as a preventive of sickness, costiveness, and the generally unpleasant state of the system arising from change of climate and living. It also lessens the dangers of incurring diseases under a tropical sun, and all who are about to take a trip to the Eastern States, if they regard health, ease and comfort on the way, should not fail to obtain a supply before starting, and more so, if ladies or children are with them; or invalids or the sick, as nothing is as grateful to the palate and stomach as this, and resists the enervating effects of hot countries so well; and, unlike ardent spirits, it does not enfeeble by inflaming, but strengthens and exhilirates both body and mind by its nutritious powers and the energy which it imparts to the digestive process: so, too, should seamen be provided with some before they leave the port—

"Those gallant men and glorious sons of toil,
Who brave the dangerous deep to guard their native soil,
And with daring hands the white wings of Commerce spread,
To bless the world and to earn their bread."

A glass taken at any time of the day removes all feelings of heat, thirst or even hunger; and its being made in a great measure of vegetable acids tends, to prevent Scurvy and purifies the blood at the same time. It is also an invaluable Restorative for those who labor hard for a living, such as Farmers, Miners, Mechanics and Laborers, and to Storekeepers, Professional men and others, whose occupations compel them to lead sedentary lives, a draught before breakfast gives new spirit for the business of the day; and last, though not least, it is a boon to Woman, who is—

"The sweetest or sourest source of all our joy and woe,
That this world can give or life must know,
To those who are mothers, sisters, daughters, wives,
And would have pleasant homes and happy lives,
Should Sherbet keep,—the best thing made yet—
For with no widow's tears or orphan's cries is ever wet."

At home, in the house, for husbands, fathers, sons, brothers, beaux to use, and their own dear selves and darling little ones as well—medical men who know its composition speak in the highest terms of its utility, and all the poet's praise. Byron calls it the blest Sherbet, Moore make frequent mention of it, and Hafiz the great Persian bard says:

"Boy, let yon sparkling Sherbet flow,
And bid thy pensive heart be glad."

PREPARED BY

AUGUSTUS HOGG,

Depot at the Davis Street Drug Store, near Jackson, San Francisco; and for sale by all respectable druggists and dealers, at 50 cents per Bottle—each one will make 12 glasses.

☞ Orders, accompanied by funds, can be forwarded by Wells, Fargo & Co.'s Express.

N B.—Agents wanted and supplied on the most liberal and convenient terms. v7-17

SANDS' SARSAPARILLA,

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1855.

Messrs. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 3d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bone, one-eighth of an inch long came out, after which the legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,

CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

Messrs. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN BALSAM, and applied it according to the directions. The application produced a decidedly beneficial effect, and I have used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years. Yours, &c.,

G. B. WILLIAMS, 262 Broadway.

PRICE, 25 CENTS PER JAR.

Prepared and sold by A. B. & D. SANDS, Druggists, 100 Fulton-street, corner of William, New York. Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v7-

BLACK HAWK DAVID HILL

Colts Sired by David Hill in 185[illegible]

Persons owning the same are requested to call [illegible] undersigned before they are one week old, [illegible] receive certificates for the same.

Colts Sired by David Hill in 18[illegible]

I will give for Entire Colts five hundred dollars, three hundred for Fillies, delivered sound, at the agency, Black Hawk Stables, 99 Pine street.

April 1, 1857. B. F. FISH, Agent. v7-

LETTER FROM NEW YORK

[FROM OUR SPECIAL CORRESPONDENT.]

NEW YORK, May 5, 1857.

EDITORS FARMER: In the hurry usual, just before the departure of the steamer, I have but a few moments to write. I have a short chapter on "The First of May in Gotham," but it is not *finished* yet, and will do for the next package.

The season here thus far has been cold and backward, and very wet. It is now raining in true California style, good and strong—big drops and plenty of them, bright and pure as the dew of the morning. The crops in the country are looking fair, I understand; but many fear the cold weather recently felt here, has killed the fruit. I hope not, as we cannot well get fruit from your State until our new Steamers are ready; and then California can send her surplus apples, pears, &c., to New York, and thence throughout all Yankeedom.

There is no news of importance stirring, out of the usual course of events. There are to be found the usual number of mishaps, murders, and crimes of every description in our midst, and through the whole country. Politics, below par, and long since voted a bore by the "quid nunes" of the country.

Preparations for the coming anniversaries of the various religious and benevolent societies are progressing finely, and absorb the attention of those who have little to do, but to tell an old story, or hear an older one. Men, women, and children, will come from all parts of the land, to see the sights and hear the speakers—beginning with the Tract Society, and winding up with the Quaker Yearly Meeting and a rain storm in June.

The President is getting warm in his seat and feels comfortable; has sent Walker to Kansas, to "fix things," while he and Gen. Cass have a cosey chat in the White-house. Good plan that.

The trial of Mrs. Cunningham, indicted for the murder of Dr. Burdell, commenced yesterday and will hardly be closed by the time the next steamer sails from here for your shores.

You will see a gloomy picture in the New York Herald of the 29th of April, in relation to California. I intend to reply to it, in some of the city papers, before the next steamer sails. I saw it last night, for the first time. It is really too bad to let it go unanswered. I wish an abler pen could do the work, but I will do the best I can, hoping to be followed by others; for I never will, while I can use a pen, or my tongue, let that glorious land and her energetic population be traduced, and remain silent; but ever, in all places, at all times, and under all circumstances, I will earnestly pray that God may bless California and her noble sons and daughters.

The most important news from Europe is the rejection of the Dallas-Clarendon Treaty by England. Never mind; let them try again. England and America cannot afford to fight each other. It will never pay, no never. More anon, B.

FROM THE EAST.—The P. M. S. S. Co.'s steamer Golden Age, Commander J. T. Watkins, arrived here this morning, about two o'clock, from Panama. Her dates from the East are up to the 5th of May. The Golden Age brings 883 passengers—520 males, 229 females, and 134 children.

It is reported that the cause of the refusal of Great Britain to ratify the treaty, relates to the affairs of Honduras, which are still in an unsettled state, and that the English government will insist at all hazards upon their rights to receive the stipulations of the Honduras government for the perpetual exclusion of slavery from that territory, and to make it a matter of absolute treaty obligation.

It is said, however, that the real cause is the determination of Great Britain to retain possession of the Bay Islands, which by the treaty were surrendered to the State of Honduras.

The Navy Department having reason to believe that the crew of the ship Highflyer, wrecked on the coast of Formosa, were murdered, instructions have just been issued to the East India Squadron to proceed thither to make investigation.

The orders of the late administration regarding the protection of persons and property of citizens of the United States at Panama, remain in force, and require this to be done at all hazards.

There are twenty-three and a quarter millions of dollars in the Treasury, subject to draft.

The Constitution of Massachusetts has been amended—all voters must be able to read and write, and the Senate is to consist of 40, and the House of 240 members.

A President and six Directors, to manage the affairs of the Accessory Transit Company were elected by the Stockholders of the Company. The following, says the N. Y. Times, were elected: President, James M. Cross; Directors, Daniel B. Allen, John P. Yelverton, Richard Varick, Peleg Hall, Frank Work, Chauncey St. John. The announcement of a programme for future movements is deferred till "Gen. Walker is killed off"—at least [illegible] was stated at the office subsequent to the election.

The U. S. steamer Niagara has proved herself a perfect success, and has left for England.

The schooner Merchant was seized in New York on the 23d ult., as a slaver.

The Provincial Parliament of Nova Scotia has passed a bill which concedes to the Atlantic Telegraph Company the exclusive right for fifty years [illegible] upon the shores of that Province submarine [illegible] cables. Bills of similar import have also passed the Legislatures of New Brunswick and [illegible].

The China War.—The Emperor of China was preparing for a vigorous defence, both of his coast and capitol. Several of the fresh water streams had been poisoned, and it was ordered that the country around Pekin should be inundated, by turning rivers from their sources, as to prevent the advance of an invading army. England, France, Portugal and Spain were to combine against the Celestials. The two former will, it is said, march hand in hand to conquest. Russia was concentrating a large force on the banks of the Amoor river. The non-committal policy of the United States Cabinet on the important matter of the war with China was much criticised in the papers of London and Paris.

THE
FIRST INDUSTRIAL EXHIBITION
UNDER THE DIRECTION OF THE
MECHANICS' INSTITUTE
Of the City of San Francisco,
WILL BE OPENED IN
SAN FRANCISCO,
On Monday, September 7, 1857,
And continue Open at least Ten Days.

CIRCULAR.

IN accordance with the announcement contained in a brief circular issued in December last, THE FIRST INDUSTRIAL FAIR of the MECHANICS' INSTITUTE of the City of San Francisco, will be held in said city in September next, commencing on Monday, the 7th day of the month, and continuing open at least ten days.

The Board of Directors having carefully considered in all its bearings the subject of holding a Fair at the time proposed, have arrived at the conclusion that with a reasonable amount of exertion on the part of Mechanics and others interested—such an Exhibition can be made not only creditable, but highly beneficial to our young State.

The advantages of Fairs must appear obvious to every reflecting mind, and in no quarter of the globe do they promise more than in California, where so much may be accomplished by the dissemination of correct information, relative to her natural and artificial resources. Besides exciting emulation; extending practical knowledge; suggesting ideas to ingenious minds; affording tangible evidence of superiority; stimulating talent; promoting extensive social intercourse among producers and their patrons, and exhibiting the progress of the arts; they cannot fail to excite a world-wide interest in regard to our State and extend reliable information respecting its resources, which will tend to encourage immigration and to permanently establish beneath our genial skies, an industrious, enlightened, prosperous and happy population.

We earnestly solicit for exhibition the products of every department of Industry—works of art every variety—choice specimens of ingenuity and skill—rare and valuable productions, natural or artificial—the delicate and beautiful handiwork of women—useful labor-saving machines—implements of mining and husbandry—new models of machinery—the products of the quarry and the mine, the hot-house, the orchard, the vineyard, the garden and the field—in short whatever Nature or Art can contribute, Curiosity discover, or Ingenuity devise.

Importers and Dealers are cordially invited to participate in the Fair by exhibiting whatever is calculated to excite interest or extend information in regard to useful improvements.

Persons throughout this State and Oregon are requested to communicate such facts relative to the natural resources, and the facilities for industrial pursuits in their respective districts, as may be deemed by them important; also to give reliable information concerning the geology and mineralogy of their particular localities; and, a Committee of scientific and practical men will be appointed to prepare a report based upon the information thus derived.

We cordially invite the co-operation of all classes in the community, believing that *all* are interested in making this, an Exhibition worthy of general notice and admiration. Medals and Diplomas will be awarded to the owners of such articles as may be deemed worthy of such distinction, and we intend that the strictest impartiality and fairness shall be observed in the appointment of Judges and the distribution of awards.

We confidently hope that the experiment about to be made of holding an Annual Industrial Fair in San Francisco, will be crowned with success and give general satisfaction.

The California Steam Navigation Company—the Pacific Mail Steamship Company, and other Transportation Companies, have generously offered to carry articles intended for the Fair, free of charge.

All articles forwarded, should be labeled, "*For the Industrial Fair*," and addressed to "H. F. WILLIAMS, *Mechanics' Institute, San Francisco.*

RULES AND REGULATIONS

Of the First Industrial Exhibition of the Mechanics' Institute, of the City of San Francisco.

I.

The Rooms will be opened for the reception of goods on Monday, August 24th, and continue open for that purpose until Saturday, September 5th, and the Exhibition will be opened to the public on the Monday following.

II.

When articles are entered, a check for the same will be given, which must be presented when the articles are returned.

III.

The name of every article should be attached to it, and also a description, pointing out its merits, when thought desirable by the exhibitor.

IV.

Articles intended for sale will be labeled accordingly, but cannot be removed until the close of the Exhibition except by the written permission of the Committee of Arrangements.

V.

Light, fancy, or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the Executive Committee.

VI.

Proof of origin must be given when required.

VII.

Committees will be appointed to examine all articles presented, and the Executive Committee will award premiums, on such as the several Committees shall decide most worthy. The Premiums to be delivered as soon as they can be prepared.

VIII.

The morning of each day till 9 o'clock, will be appropriated to the Judges, and visitors will not be admitted during said time.

IX.

In case of misunderstanding, application may be made to the Executive Committee, who will at all times be in attendance.

X.

Steam power will be provided, that Machinery of all kinds may be seen in actual operation, and every facility possible will be given to exhibit all working machinery to the best advantage.

XI.

All articles deposited will be at the risk of the owners, who are invited to be present during the hours of exhibition. In the intervals of the exhibition, efficient measures will be taken for the protection of property.

XII.

Articles from a distance will be stored free of charge, until the rooms are in readiness.

XIII.

Owners or agents offering articles for exhibition, will receive tickets of admission gratis, but in no case transferable.

XIV.

Persons intending to take part in the Exhibition, are earnestly requested to make known their intention at the earliest practicable period—stating the kind of article or articles they intend exhibiting and the probable amount of space required.

Corner California and Battery streets,
San Francisco.
N. B.—Any of the above named articles can be had at our branch store at Marysville. v7-9 3m

The Great Stump Puller.
WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:
The Orange Improved Stump Machine.
Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!
My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.
It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.
It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.
The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.
Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!
It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.
The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

Hydraulic Hose and Pipes.
A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. Benicia High School.
THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.
This is the oldest Boarding School in the State.
The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.
A daily account of recitations and deportment will be kept and sent monthly to parents.
The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.
No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.
For further information or references, address the Principal.

The above Volumes will be mailed to any address, on receipt of Postage Stamps. v7-16 2m

Downing's Rural Essays.
Edited with a Memoir of the Author, by George William Curtis, and a Letter to his Friends, by Frederica Bremer. In One Volume Octavo.

Of Mr. Downing's reputation as a writer, it is almost superfluous to speak. He is, by universal consent, the best and most interesting among those who have chosen the same line. This volume contains all the editorial papers in the HORTICULTURIST. The memoir will be read with great interest, on account of the amiable and excellent character of Mr Downing, as well as his well-earned literary fame. Miss Bremer's testimonial to his merit is an eulogium equally worthy of him and of herself. The volume closes with a series of interesting letters from England.

CALIFORNIA AGENTS.

J. W. SULLIVAN, *near Post-Office, San Francisco.*
WELLS, FARGO & Co., *at all their Offices in this State.*
LANGTON & Co., *at all their Offices.*
D. MCCOMB & Co.'s EXPRESS.
The FARMER can be found at the following places at all times:
ULLMAN & Co. *P. O. Building, San Francisco.*
J. W. SANBORN, *Benicia.*
THOS. T. HOOPER, *Postmaster, Benicia.*
M. M. RICHARDSON, *Suisun.*
J. M. DUDLEY, ESQ., *Napa City and County.*
J. W. SMITH, *Napa.*
ROSENBAUM & VAN ALLEN, *Stockton.*
P. F. GRANT, *Deputy Postmaster, Santa Clara.*
A. A. DUNHAM, *Half-Moon Bay, will supply those ale and papers.*

Foreign Agents.
C. M. SAXTON & Co., *New York City. All orders addressed to the Associate Editor, at C. M. Saxton & Co.'s, will receive attention.*
J. Q. A. WARREN, Boston, Mass., *Associate Editor and Corresponding Agent for the Eastern States, by whom Subscriptions and Advertisements are received—Office, 25 Washington street.*
GRAY, ADAMS & HOGG, *Nurserymen, Seedsmen and Florists, Kensington Road, London, will receive Subscriptions for this paper.*
M. DUSACQ, *Bookseller, Paris, will receive Subscriptions.*
** Subscribers can always form Clubs and transmit by either of the Expresses, or with perfect safety by Mail.

THE LAW OF NEWSPAPERS.
1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.
☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.
Postage of the Farmer.—The Postage of the FARMER to any part of the State is only 6½ cents per quarter, or 26 cents per year. This is the lawful postage established by Congress and when more is exacted it is a violation of law

THE CALIFORNIA FARMER

And Journal of Useful Sciences.

VOLUME VII. SAN FRANCISCO, CALIFORNIA, FRIDAY MORNING, JUNE 5, 1857. NUMBER 21.

The California Farmer

AND JOURNAL OF USEFUL SCIENCES.

By WARREN & CO.

PUBLISHED EVERY FRIDAY MORNING,
Simultaneously at Sacramento and San Francisco.

Office—on Fourth street, between J and K, Sacramento.
—No. 130 Washington street (up stairs), San Francisco

TERMS.—Five dollars per annum, in advance. For a club of five new subscribers, we will send a sixth copy gratis.

☞ Advertisements in this journal will have a circulation and notice unequaled.

☞ **Advertisements and Subscriptions must be paid for in Advance.**

Agricultural Reviews and Essays—No. 14.

The Study of Agriculture.

"CHEMISTRY. By William Gregory, M. D., F. R. S. E." (London.)

"CHEMISTRY in its application to Agriculture and Physiology. By Justus Liebig. Edited from his MSS, by Playfair and Gregory. From the fourth London edition." (Wiley and Halstead, New York.)

"ANNALS de Chimie. Boussingault" (Paris.)

"ELEMENTS of Agricultural Chemistry. By Sir Humphrey Davy." (London.)

"LECTURES on Agricultural Chemistry. By Professor Johnstone." (Edinburgh.)

We live in a progressive age. We are not, and we ought not to be, mere followers of our forefathers. Human knowledge, like the schoolboy's snowball, grows as it passes along. Every additional revolution of the wheels of Time adds its contribution to the common stock, and helps to swell the bequests of bygone ages. We would not be idle where all are at work. The science of Agriculture is only beginning to be recognized as such. Can we do nothing to advance it? Can we not at least aid in developing and applying the agricultural knowledge already acquired, so as to make it more serviceable than it now is to our own State?

I hope we can. But we must recollect that knowledge seldom comes intuitively, that it is generally the result of study, and that before we can add our contribution to the general fund, we must have a private fund of our own, however small, from which to provide it. It is not, generally speaking, by the mere practice of Agriculture that Agriculture is scientifically advanced; far less by learned men forming silly fancies, which any practical man can see through as distinctly as through an open casement. If farmers want to advance Agriculture, they must themselves study it scientifically. They must put their own shoulders to the wheel, and trust for aid neither to Heaven nor Hercules, as otherwise our good wagon may stick by the way, or at best only reach the journey's end, "a day after the fair."

Are there in California no farmers, who are practically such, who have devoted their time to investigating and comparing the different modes of Agriculture, as practiced among ourselves, and practiced abroad? who are as familiar with Liebig and Boussingault, as they are with the Shorter Catechism of the Kirk of Scotland? who have listened to the Lectures of Johnstone as he delivered them, *viva voce*? and who have studied the experience and experiments of Sir Humphrey Davy, over the midnight oil, till their temples ached, and the tide of life coursed feverishly along their veins? Have we among us no agricultural enthusiasts, men of genius as well as talent, who by their resistless eloquence may succeed in rousing us from our apparent lethargy? If we have not, what are we to do? What must be the fate of Agriculture among us? My readers may not like to hear the answer, but I will tell them. Here, in this Golden State which Winter never reaches, and where the harvest is general by Midsummer, without a drop of rain falling to interrupt our harvesting operations, where every year has exhibited, at our State Fair, larger specimens of our vegetable productions, and in greater abundance and variety—even here, will the poor farmer soon farm himself out, and be obliged to content himself with less crops than he has hitherto reaped, or go to farming elsewhere!

We read in the Good Book of a certain prophet of the Lord, who got into bad odor with a Jewish King, because he told him that he saw the Lord seated on his throne, and all his angels around him; and that the Lord asked, if there was none of them who could devise some means to induce the King to go to battle, and be beaten; and that at last there came one, who said that he knew a plan which would be successful—"to get his false prophets to flatter him." "And the Lord said unto him, 'Go, and thou shalt prevail also.'"

Do the farmers of California want me to flatter them? or do they want me to tell them frankly what I think of their case? They are too manly not to ask me to do the latter. It presents a pitiful aspect. Instead of the fields being plowed squarely and carefully in regular lands, it is a general practice to plow round and round. Instead of the farms being regularly subdivided, so that different crops may follow each other in philosophical arrangement, it is usual to go on sowing similar crops, in continued succession, till the soil will grow no longer. Instead of our farmers investigating and ascertaining how to vary their crops, their rotations are generally adopted at hap-hazard, without putting themselves to the trouble to inquire whether the crops planted this year, differ or agree in their constituents from those which they gathered last year, from the same ground. How can we possibly expect to prosper by such an indefensible system of Agriculture?

The farmer admits he has been following a wrong system, but he is at a loss how to improve it. He concludes to consult his friends. Those who have lived but a couple of years in California probably know that some of our friends here are a little selfish. Our anxious farmer is as likely to fall into the hands of such Philistines as not, and have meted out to him such recommendations as were proposed by a sapient and similarly-minded Town-Council of the olden time. The enemy, it was supposed, would besiege their city; and it was necessary for them to put their fortifications in proper order. They had no difference of opinion as to the propriety of taxing the citizens. Citizens were made to be taxed. In all countries, the rulers and governors manage to live on the flesh and fleece of the governed. It was only in regard to the application of the public funds that they were not unanimous. In that respect, every one had an opinion of his own. "The best way," said Alderman Mason, "is to repair and strengthen the Fortifications with *masonwork*." "I think *wood* is much preferable," said Alderman Carpenter. "They will require, in either case, to be strengthened with bars of *iron*, and I doubt much whether *iron alone* would not be altogether more suitable than the materials which either of you propose," said Alderman Smith. "You may talk as you please," said Alderman Tanner, "but there is nothing like *leather*."

Our farmer finds his advisers men of a similar sort. "An ordinary crop would pay well for cultivation," say Treadwell & Co., "if you had one of *our Harvesting Machines*; only consider the unnecessary expense you are at, by persisting in cradling your grain." "Recollect," says Mr. Beeching, "the saving in labor you would experience by using *our New Cultivator*." "And the manifest advantage of having one of *Pitt's or Hall's Threshers*," says Mr. Arthur. "And the importance of *trenchplowing*, or *subsoiling* your land," say several gentlemen who deal in plows, all speaking together. "Do you not see that you would soon get rich," says each and every one of them, "if you would only do as we tell you?"

Let me also have a word to say. It is of the greatest consequence to the farmer to have good Agricultural Implements; but something else is wanted. Our farmers evidently require to be better informed about the *philosophy* of Agriculture. The relations of the soil and seasons in California are strange to many of us. We cannot follow the several systems, which we found so advantageous elsewhere. Let us go to school. We are not yet too old to learn, and we have got as good heads as any people in the world. Let us not bury the talent which our generous Employer has given us, nor roll it up in a napkin. Let us completely master the scientific mysteries of the business in which we are engaged. If

"A little learning is a dangerous thing,"

let us drain the "Pierian spring" to the bottom, and not leave a drop in the *well of Truth*, within our reach, which we do not appropriate to our own individual benefit.

What an enviable and dignified position would practical farmers then occupy, compared with that which they do at present! How independent would it make them of scientific pretenders, who barely know Oats from Barley, and who after a careful inspection might be unable to tell whether Mr. Beeching's New Cultivator, which by the way is an excellent implement, is a plow or a harrow, or what it is! Yet what airs of importance do those same gentlemen give themselves, in consequence of the little which they do know! Let our farmers by all means set to acquiring scientific knowledge. They will soon acquire enough to enable them to perceive *their* shallowness. It will not take them long to acquire as much as will be of the greatest service to themselves. Let them not trust to others, nor be afraid of their own inability for the task.

Once on a time, says the fable, an old man had a small field of wheat, in which a little bird had built its nest. Considering circumstances, it was a very wise bird; and as the crop was approaching maturity, it never failed, every morning before it went abroad, to repeat its instructions to its young family in the nest, to pay particular attention to what they saw and heard going on, as it was very likely the crop would soon be cut down, and it would be of the utmost consequence for them to remove elsewhere, before that event took place. This she did day after day, but nothing transpired for some time, to interrupt the tranquility of old or young. At length, however, an event took place, which filled the breasts of the young birds with serious apprehensions. The old man and his son came to inspect the field, and, after walking round it, and looking minutely at the ears of grain, came to the conclusion that it was perfectly ripe; and in consequence the old man requested his son to go next day and ask his neighbors to cut it down for them, as neither he nor the youngster, who was but a boy, were very competent for the task, and if they all came it would not take them over a few hours to do it. "Is that all?" said the old bird; "then you may keep yourselves perfectly easy. I suppose, if he relies on his neighbors, it will be some time before it is cut down." The old bird however did not neglect to caution her young ones to be on their guard, as the crop was evidently ready for the sickle. It turned out as the bird anticipated. Not one of his neighbors came. But in the afternoon, the old man, accompanied by his boy, again came and looked at the crop, and as the weather was fine and every thing favorable, he concluded that the harvest work must not longer be delayed. So he sent his son forthwith to acquaint and bring with him next morning some relations of his, who lived at some little distance, *that they might cut it down*. "What do you think of our chances now?" said the young birds, as they told mamma on her return at night what they had overheard. "Had we not better be off in the morning?" "There is no danger," said the old bird; "take my word for it his relations will not come;" and repeating her advice she went away next morning as usual. The young birds were not exactly satisfied with mamma's ideas of family affection among men, as they spake a feeling so different from what they entertained for her, and for each other. But again she was right. Nobody came; but just before sunset, the old man and his son again returned to look at the crop. They seemed not a little disappointed that nobody would help them, and that they should be thrown entirely on their own resources. But the old man said that the crop could wait no longer, and as nobody would cut it for them, they would attempt to reap it themselves. He therefore instructed his son to go to a neighboring store and buy two new sickles, and as soon as they had breakfasted next morning they would proceed to cut it down themselves, as fast as they could. This proposal made the young birds laugh outright, as they concluded, when they looked at the infirm old man and the pithless stripling, that they would not have to move at all; and they were continuing to indulge in their merriment, when the old bird arrived. She was a little surprised to find them in such spirits, and gravely inquired after the cause. They told her the absurd idea of the old man. But the old bird was of a very different opinion from her "callow brood." She told them they would yet learn to know better; that they had no idea of what a man can do, when he sets seriously to work to attend himself to his own business; and that she would certainly remove them next morning before sunrise. And, says the fable, she was right; for next day the old man and the lad reaped more than one-half of the field, and on the following day had secured the whole crop.

As I am not a perfectly pliant disciple of Jean Jacques Rousseau, I would advise my agricultural friends not to despise the lesson, which the fable of the birds affords them. The old bird, in my opinion, was no fool; and if our farmers would only rely on themselves, they probably have no conception of how much progress they would make in a very short time. At all events, the circumstances of the two cases are very much alike. There does not seem to be much chance of their getting help from others, so they must evidently do the work themselves, or soon go without a crop. If I have stated my argument with sufficient distinctness, it is easy to foresee what course they will pursue. The cost of those few books, which I have placed at the top of this article, would not amount to the price of the produce of half a bushel of wheat on ordinary soil. To peruse them can do no harm. I believe, in ninety-nine cases out of every hundred, it would be of great service to the farmer to be fully acquainted with their contents. 'We live,' as I said, 'in a progressive age.' We wish not to be the only class in the community, who do not study and investigate fully the particular business in which they are engaged. What would we think of a lawyer, who merely because he was a good speaker undertook cases, without at the same time having a knowledge of law? The laws of Nature, like the laws of man, must be studied, before they can be so distinctly understood as to be applicable to each individual case. We have a remedy within our reach, if we are wise enough to avail ourselves of it. Let us not, from any fear of the toil which it involves, shrink from aspiring to possess so great a boon. If any one find in those works certain passages which he does not exactly comprehend, we are all readers of the CALIFORNIA FARMER, and have an opportunity through its columns of communicating with each other, and getting information from its Editors. Let us not be content until we reach the top of the "tree of knowledge." Its fruit has a very different effect now from what it once had.

AGRICOLA.

Rustic Ornaments.

MANY good pictures exist of Rural Ornaments for gardens (says the Horticulturist), and yet strange to say, rarely are perfect and satisfactory

FIG. 1.

specimens to be seen. The fastidious eye is offended by some detail in many instances; in others the wrong situation has been selected, or the place is in disorder with neglected vines. Some one has happily said that it is difficult to look at any objects with pleasure (unless where it arises from brutal or tumultuous emotions), without feeling that disposition of mind, which tends towards kindness and benevolence, and surely whatever creates such a disposition, by increasing our pleasures and enjoyments, cannot be too much cultivated. Every one has seen specimens of castings in Berlin iron, but large examples rarely find their way to this country. The annexed Fig. 1 represents a garden gate between the residences of two intimate friends on the banks of the Elbe near Dresden, in Saxony; each family has a key, and the gate being kept always locked intruders are excluded. The material is Berlin iron of the finest kind; the taste appeared to us perfect, and may safely be imitated. The castings of lamp-posts and various other things in Berlin are often examples of perfect beauty.

In the same garden occurs a beautiful summer house. The front with the statue faces the house; ascending the stairs you find yourself screened from the dwelling and overlooking the beautiful Elbe below. The summer house stands on a terraced wall at a bend of the river, and you enjoy a view up the stream towards the virgin castle of Königstein and Saxon Switzerland, small steam and sail boats passing almost at your feet.

Another example (Fig. 2) is a garden arbor,

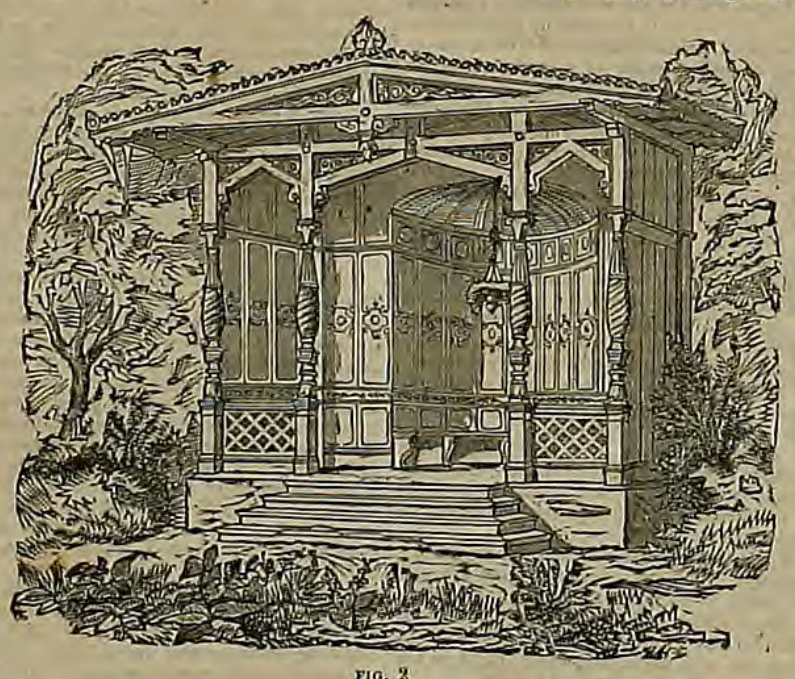

FIG. 2

partly of carved wood, which stands near the avenue leading from the Bradenburg gate to the Thier-garten near Berlin.

Berlin is celebrated for its manufacture of rustic seats, tables, &c., no less than for its drawing-room furniture. They are very tempting to the traveler; some of them found their way by the circuitous route of Bremen to the United States.

Weber's Garden, Stockton.

IT is always a pleasure for us to notice those enterprises that tend to beautify and adorn our private or public places, and when we find a person whose liberal mind and cultivated taste induce him to regard the welfare of the public while he is gratifying his own taste, then we feel that in such men we have public benefactors.

We had not visited the Gardens of Mr. Weber for about a year, and were surprised at the vast change a year had wrought. During the past year the Gardens have been much enlarged and highly improved; many new and rare plants have been added; the collection of roses much increased by new and splendid varieties. The whole design of the inner garden is beautiful and unique, and is in very perfect order.

Among the fine plants we noticed a number of large Pomegranate in bloom, their rich crimson blossoms finely contrasting with their bright green foliage. Mr. W. has a new species of Pomegranate, a dwarf variety, which we esteem a great acquisition, as it will answer finely for a bordering for a flower-garden, instead of the Box plant which is so universally used at the East.

The Vines of Mr. Weber excel those of any we have seen this season. They are heavily loaded with immense clusters, and are uncommonly luxuriant. Beside the common Los Angeles grape in great quantities, we noticed many vines loaded with fruit of foreign varieties, which had been grafted very successfully upon the Los Angeles stocks; we noticed Black Hamburg, Syrian, Malaga, St. Peter, Chasselas of Frontinac, Chasselas of Fontainbleau, Golden Chasselas, Early Cluster, Cannon Hall Muscat, &c.

We noticed several fine arbors of the Vine erected on the windward side of the Garden, to serve as a shield to the wind; an excellent plan. The Apple and Pear trees are large and thrifty and give promise, some Apple trees heavily fruited. The Peach trees, are as fine and promising as we ever saw.

Although the Gardens cover many acres of ground and are inclosed, Mr. Weber has planted outside of his Gardens, broad and spacious walks and a carriage drive, and these are accessible to the public. They are extensive, and are splendidly ornamented with many thousand fruit and ornamental trees and shrubs of the choicest kinds. We feel that the citizens of Stockton, in having so pleasant a retreat as this public promenade, offered them so freely, are under great obligations to Mr. Weber, and the least return they can make is to see that the trees and shrubs are protected from that reckless spirit of vandalism which is too apt to trespass upon the liberality of others.

A courteous reception and polite attention from the proprietor, made our visit a very pleasant one, and we know those who attend the Fair at Stockton will enjoy a rich treat in visiting these beautiful and highly cultivated grounds.

CHEAP WELL BORING.—While at Stockton this week, and on a visit to a friend's house, a well-borer called to inquire if the proprietor desired a well bored? Upon inquiry as to terms, we heard him say, that he would bore a well thirty feet deep, put the pipe in and set the pump, for the sum of eight dollars. Who will want water after this?

The kind of well is that of which we have spoken, bored with a two-inch auger, and made to be used by a force pump. To these, however, can be attached the windmills, such as are used so generally in Stockton, and now the best in the State. They are the best and cheapest used.

LICE ON CALVES.—A correspondent writes that he finds nothing so good for killing lice on calves as a strong decoction of tobacco—say about half a pound to each calf. Wash the calves all over with it once, and again, if need be, after two weeks.

Sugar Duties.

We annex the following important article upon the subject of Sugar, and we ask of the people of California if, with these facts before them, there should not be strenuous efforts made to introduce and cultivate the Sugar Cane and the Sugar Beet:

The high price of that indispensable article, sugar, is beginning to be felt by all classes, but more especially by the poor and working people, men who only earn a few dollars a week, and have a family of perhaps several children to support therefrom. Sugar enters into the composition of nearly all the preparations for the table; it is used at every meal, and forms one of the main comforts, and almost necessaries of life. While the article was cheap no one complained of the duty, but now, from the failure of the crops in Louisiana and deterioration of the cane, it has become so scarce as to enhance the price to the consumer eighty per cent., the thirty per cent. duty becomes an intolerable burden, and the more so because it being an *ad valorem* impost, the dearer the article the higher the duty.

This is not a mere tariff question, but one of sheer humanity, and should be so felt by every human person. It is the reproach of foreigners that the United States seldom legislate for the poor. Heretofore it has been said that there were no poor in this country, how far this may have been true in former periods of the history of this country it is certainly not true now, as every one may easily satisfy himself in any of the great cities, especially in the winter season. The mass of unemployed persons, men, women and children calling for alms in the city of New York is surprising; so indeed, in all the great cities of the Union, not only on the sea board but even in the wealthy West. How can it be otherwise, for from the earliest ages of which we have any record the poor always abounded where large masses congregated. The Savior himself has said the poor you have with you always. Now, if the poor are always to be with us we must be prepared to provide for them, and in what way can we better do so than by making the necessaries of life—the articles they most consume as food, as cheap as possible.

Now let us see how useful, necessary, and even indispensible, the article of sugar is in a large family of straightened circumstances. Rice is a great article of diet, and comparatively cheap, yet what is rice but an insipid and comparatively useless article without the saccharine principle, either in the shape of sugar, sirup, or molasses? So, again, with the Indian meal, that great and most valuable of all cereals. In how many forms it is employed for the table, yet without the sweetening how comparatively valueless it would become. A little mush and molasses will always make a tolerably palatable and nutritious meal for the hungry, more especially children. A few cents, indeed, when sweetening is cheap, will provide a meal for several juveniles. In short, view this question as we please, we find arguments meeting us and crying cloud for the repeal of the sugar duty. Let benevolent men and women, of whom there are thousands throughout the land, look to this matter.

As a great article of domestic industry the cultivation of sugar is not to be placed in competition with the comfort and happiness of millions. A memorial to Congress, of which we subjoin a copy, is now in circulation for signatures, and we trust it will be extensively signed and speedily laid before the National Legislature. That memorial calls for a total repeal of the impost, and directly affirms that the climate of Louisiana is not adapted to the growth of sugar, and can never supply the demand. Of the truth of the latter assertion the present scarcity of the article is competent evidence, but of one fact we are entirely satisfied, that let what improvement in the modes of culture take place that skill and industry may put in requisition, by importing new cuttings from the tropic, &c., Louisiana, and Texas besides, can never do more than supply the great and increasing population of the Western States. Every pound that can be produced will be taken and consumed west of the Alleghany Mountains, leaving the Atlantic States and their vastly populated cities to look to regions more immediately north and south of the equator for their supply.

The following is the memorial alluded to:

To the Senate and House of Representatives of the United States of America, in Congress Assembled.

Respectfully Represent:

That Sugar has become so universal and indispensable an article of consumption as to be not improperly reckoned among the necessaries of life.

That the duty of thirty per cent., with which it is burdened, on its importation into our country, weighs severely upon the mass of the people and upon the various trades and occupations in which it is used as a raw material.

That the Sugar Cane is a tropical plant, which does not come to perfection in the climate of the United States; and that, owing to frequent unfavorable seasons, the tendency of the plant to degenerate, and the exhaustion of the soil of the Sugar estates, more labor is necessary to produce a given quantity of Sugar in this country, than in any other part of the world from which the commodity is brought.

That the making of Sugar from the cane, is, for these reasons, even with the present high duty, never likely to become a prosperous branch of industry in our country.

The undersigned, therefore pray, that Congress will altogether relieve the people from the duty on imported Sugar.

Sunflowers a Preventive of Ague.—Lieut. Maury, in an article communicated to the Rural New Yorker, maintains that the growing of sunflowers around a dwelling located near a fever and ague region, neutralizes the miasma in which that disease originates; and seems to support the theory by successful experiment. He says that an acre of sunflowers will absorb during their growth many thousand gallons of water more than supplied by the rains. They are of easy cultivation, and the seeds, which are very valuable, find a ready market at the drug stores. The theory or science of the experiment is this: The ague and fever poison is set free during the process of vegetable decay, which poison is absorbed by the rank growing sunflower, again elaborated into vegetable matter, and so retained until cold weather sets in. He reports the results of some experiments made, and also suggests that water lilies planted in marshes would have a similar beneficial effect. The N. Y. Commercial says: "If on a second trial the result proves equally favorable the practical benefit of the discovery will be great indeed, and Lieut. Maury will have added another to the evidences he has given that true science is the handmaid of practical utility."

Sow Lettuce with Cabbage.—Lettuce seed sown with cabbage, will generally prevent the destruction of the latter by the fly. The lettuce should be pulled up as soon as the cabbage plants are out of danger. Worth a trial.

How to Raise Turkeys.

A correspondent of the Country Gentleman says: Will you allow me in farmer style, through your paper, to give my experience in raising turkeys, for the benefit of your readers. I commenced raising turkeys about three years ago, but never met with any success until the last season, 1856. The winter previous I wintered one tom and two hens, and they laid sixty eggs, from which I raised forty-five turkeys from fifty hatched. Until the last summer I never could raise over one-fourth that were hatched.

My mode of raising them is as follows: I made each hen lay two sittings, which they will do without injury if they are well wintered. I sit two sittings under dunghill fowls and the remainder under turkey hens. As soon as they are hatched, I have crates provided and immediately shut them up for four weeks, and then let them range anywhere on the farm. I feed them on Indian meal and keep buttermilk constantly before them. I throw about half an ounce of asafetida in their milk each day, and this keeps them lively, and they are never bothered with lice. When I let them out they seem to grow up without any more trouble.

I think there is nothing that will afford our farmers greater profit than turkeys, if managed in this way. I think the whole secret of my success lies in the asafetida. My debt and credit stands as follows:

	Dr.
To three old turkeys	$3 00
To four bushels corn	3 00
To meal-fed young ones	5 00
To one pound asafetida	96
	$11 96
	Cr.
By 45 turkeys raised and sold at $1,	$45 00
By three old ones	3 00
By two bushels manure	3 00
	$51 00
	11 96
Leaving a net profit of	$39 04

on three turkeys in one year, or $13 profit on each turkey.

If any of your readers can give me any more advice on the subject, I will be thankful for it.

Jason H. Tuttle.

Sandyston, N. J.

Mysteries of a Junk of Coal.

For years no one supposed that a piece of soft coal dug up from it mine or bed in the earth, possessed any other property than being combustible, or was valuable for any other purpose than as a fuel. It was next found that it would afford a gas which is also combustible. Chemical analysis proved it to be made up of hydrogen. In process of time mechanical and chemical ingenuity devised a mode of manufacturing this gas and applying it to the lighting of buildings and cities on a large scale. In doing this other products of distillation were developed, until step by step the following ingredients or materials are extracted from it:

1st, an excellent oil to supply light-houses, equal to the best sperm oil, and at a lower cost.

2. *Benzole.* A light sort of etherial fluid which evaporates easily, and combining with vapor or moist air is used for the purpose of portable gas lamps, so called.

3. *Naptha.* A heavier fluid, useful to dissolve Gutta Percha, India Rubber, etc.

4. An oil excellent for lubricating purposes.

5. *Asphaltum*—which is a black solid substance, useful in making varnishes, covering roofs and covering over vaults.

6. *Parrafine.* This is a white crystalline substance resembling white wax, and which can be made into beautiful wax candles. It melts at a temperature of 110 degrees, and affords an excellent light.

All of these substances we learn by the Plough Loom and Anvil, are now made from the soft coal found in Kentucky, and manufactured by the Breckinridge coal company at Cloversport, in that State. They have twelve retorts in operation day and night, consuming eight or ten tons of coal every twenty-four hours.

One can hardly realize as he takes a lump of heavy smutty coal in his hand, that he holds concentrated therein, all these different ingredients chained within, and which a little heat properly applied will liberate and present in their separate forms, ready for the several purposes to which they are adapted.—[Maine Far.

The Eye, and how to See.

From an article in the Scientific American, with the above caption, we extract the following:

The difference between the use of one and two eyes is not generally known. One eye has been found sufficient for the general purposes of life. There are instances on record of persons having the sight of but one eye, and yet were ignorant for years of having a blind one. There are also a great number of persons who have lost an eye by accident, and with the remaining one have performed all the duties required of the two. Two eyes, however, are better than one, for the field of vision with one is only about 150°, while with two it is about 200°. It was long supposed, by many, that we saw objects twice as luminous with two as with one eye; but this is a mistake, for objects are seen as brightly with one as with two eyes.

The pupil of the eye increases in size to admit as much light, when one eye is shut, as when both of them are open; therefore, so far as mere brightness is concerned, the loss of one eye is no disadvantage. Sir David Brewster has determined this by experiment. Two eyes enable us to see solid objects in a higher relief, and all distances in nature more perfectly than one eye. With one eye, however, we see the direction in which an object or point is situated more distinctly than with two eyes. By monocular vision (one eye) we see the exact point where a near object strikes a more distant one in line; this we cannot do with both eyes directed to it, for while they see a near object distinctly, they do not perceive *two* objects in line accurately; hence one eye only is used in shooting with a rifle at a mark, because it takes cognizance correctly of the *sight* on the rifle, and the mark in a line beyond the needle—further off. Some have supposed that practice alone gives us an appreciation of distances with the eyes—one or two—and this idea of acquiring all knowledge experimentally is taught by some works on philosophy, but it is a mistake. An artist in this city (New York), distinguished for his skill and fine tastes, who has been deprived of the use of one eye for a number of years, has told us that in a dim light, such as the dusk of evening, he has never learned to judge well of distances; in other respects, however, monocular vision is more advantageous to him than otherwise in pursuing his profession.

To prove that we can appreciate distances more correctly with two eyes than with one, let any person endeavor to thread a tolerably large needle held out at arm's length, and he will discover how deceptive monocular vision is, regarding distance. The needle's eye will appear further from him than it really is, and he will continually thrust the thread in a line beyond it.

Electric Illumination.—A few weeks since, some experiments on electric illumination were made at Paris, surpassing all that had before been done. The success was due to an electric regulator invented by MM. Lacassagne and Thiers, called by them an *electro-metric* repeater. It is complicated in structure and cannot well be described here. The inventors placed four of their electric lamps on the platform of the Arc de Triomphe de l'Etoile, and projected the light one day on the Champs Elysées, towards the Place de la Concorde, and a second on the avenues of Neuilly or de l'Impératrice, the change having been made because of the numerous gas lights of the Champs Elysées. These gas lights were made to look dull and smoky, yet diminished the effect of the electric light; but in the avenues of l'Impératrice the light presented intense brilliancy.

Each lamp was sustained by means of sixty of Bunsen's pairs, and furnished with a spherical reflector of metal, or of glass silvered by a battery in the manner described beyond.

Manufacture of Soda.—Mr. Melsens, Professor of Chemistry at Brussels,—known for his works on chemistry and also in connection with the preparation of anhydrous acetic acid by means of bi-acetate of soda, the production of the chlorated bodies by means of an amalgam of sodium, etc.,—has patented a new method for the manufacture of soda, a process of great importance, if it be economical. It is based on the well-known fact of the decomposition of sulphate of soda by carbonate of baryta. An equivalent of the former with one of the latter produces two-thirds of an equivalent of each carbonate of baryta and sulphate of baryta; one-third of an equivalent of each carbonate of baryta and sulphate of soda remaining unaltered.

Melsens has observed that the change will go on in the cold and with native carbonate of baryta, and this is the basis of his method.

This carbonate is powdered and subjected to a washing by means of a solution of sulphate of soda. This mode of washing, for a long time practised in the arts, enables him to obtain the carbonate of soda in a state of considerable concentration. Some little sulphate of soda however remains, which may be separated either by crystallization or by taking advantage of the fact that sulphate of soda is more soluble in water at 33° C. than in boiling water, it precipitating when the water is carried to the boiling point. The purification is finished by putting the liquid in contact with a solution of carbonate of baryta in carbonic acid. Mr. Melsens has also endeavored to decompose the carbonate of baryta and sulphate of soda by using high pressure furnished by a self-regulating machine. But no advantage has been found in this process.

As the carbonate of baryta is poisonous, it is proposed to pulverize it after moistening it with a solution of sulphate of soda. The sulphate of baryta obtained in the process is employed either in the manufacture of paper, or for paints, this last a use not honest perhaps, but yet, in these days, of extensive application.

Astronomical News—Paris Observatory. The observatory at Paris continues to make progress. It is well-known that it has two wings, an eastern and a western; on the former, in the time of Arago, a revolving chamber for observation was constructed, whose mechanism is a *chef d'œuvre*. The western wing is about to receive a telescope of the largest dimensions, at the expense of the government, and also an equatorial with a 11-inch aperture, constructed by Secrétan.

The objective of the telescope will be constructed with two disks of flint glass and crown glass, cast in the glass-house of Chance & Co., Oldbury near Birmingham, which were on exhibition at the Crystal Palace in Paris. These glasses were imperfectly appreciated by the jury, for it was thought that after extracting certain portions that were not perfectly transparent and remelting them several times, they would not afford an objective over 40 centimeters in diameter. They were however deemed irreproachable and were purchased for 50,000 francs; and it is now expected that the objective made from them will have a diameter of 73 centimeters. The work will be carried on at the observatory by M. Secrétan. If the curvature obtained be perfect, the achromatism without fault, and the expected size be attained, France will have the most powerful lens in the world.—[American Journal of Science and Arts.

Persevere and Obstacles will Vanish.—There are spots in all our rivers almost, the Hudson, Connecticut, Mississippi, and others, where the prospect is shut in by their sudden bends and turns, or by islands scattered on their bosoms, so that to the inexperienced eye no way seems open to any further advance upon them. The Thousand Islands on Lake Ontario is a magnificent example of this; the voyager cannot at first see how it is possible at certain places to make much further progress, and penetrate what seems to be the absolute limit of the water.

So it happens often in most persons' experience. Obstacles present themselves in front that appear really insurmountable. One does not see any way to turn in order to extricate himself from overwhelming embarrassment, and he is ready to give up in despair. But *nil desperandum*—keep moving—persevere, and ere long a passage will open as is by magic before you, and your little bark of hope and happiness will pass through unharmed, as Dr. Kane's boats did more than once through horrible cliffs of ice on either side, which threatened to crush them in a moment. Then, beyond these sometimes real, sometimes imaginary perils, a clear perspective bursts upon the sight, intercepted neither by mountains of ice, nor inland impediment, nor river curve, but expanding everywhere before energetic enterprise, and promising its usual reward—success.—[Newark Advertiser.

The Use of Tobacco.—The London Lancet gives this as its well considered opinion in relation to the use of tobacco and cigars:

1. To smoke early in the day is excess. 2. As people are generally constituted, to smoke more than one or two pipes of tobacco, or one or two cigars daily, is excess. 3. Youthful indulgence in smoking is excess. 4. There are physiological indications which, occurring in any individual case, are criteria of excess. "We most earnestly desire," says the Lancet "to see the habit of smoking diminish, and we entreat the youth of this country to abandon it altogether. Let them lay our advice to heart. Let them give up a dubious pleasure for a certain good. Ten years hence we shall receive their thanks."

Gapes in Chickens.—A correspondent in an Eastern paper, recommends tobacco water in the food, for this complaint.

Miscellany.

DARK DAYS.

How they blot life's pages o'er—
Like the spots upon the sun,
Only blacker, many more!
Yet we count them one by one.
Each seems darker than the last—
Each its special sadness shows,
And they stretch back in the past—
Standing out as separate woes.

Dark days, circled in by clouds—
Shot by lightnings, which are *pangs!*
Dark days, each a soul enshrouds—
Each a pall around it hangs.
Dark and *silent* days!—save when
Silence broken is by sobs;
Or, as swelling, now and then
Audibly the big heart throbs.

Dark days, when no living smile
Can to grief a ray impart;
When, by contrast, all the while
Darker only is the heart:
Dark days, when that heart alone
All its bitterness can feel;
When on earth there is not one
Who can understand, nor heal.

Dark days, smitten by the rod,
When averted are Heaven's eyes—
When with suffering even God
Seems no more to sympathize:
Then Faith feels out in the dark—
Knows a hand is somewhere there,
And turns upward still, to hark
For the answer to its prayer.

Dark, *dark* day, if no Voice speaks,
If no star shines through the gloom,
If in vain the Hand Faith seeks,—
O, that seems the day of doom.
Only *seems* so—God is true,
When he shows, or hides his rays;
Flowers—as sunshine, need night-dew—
Dark Days are faith's trial days.

(E. C. K., N. Y. Observer.

The Rich Cousin.

"But, my dear father, he has had undisturbed possession so long, that it is cruel to reduce him to beggary now."

"Cruel! You know nothing of the sweets of revenge, boy, or you would not say that. Think you that I have waited all these years to gratify a purpose, and now when the time has come, give it up because it is cruel?"

"But his wife and children? Surely you will not—cannot punish the innocent for the guilty!"

"In that is my revenge. What would poverty be to Edward Leicester alone? No, no; he must see his family stripped of all the luxuries they have so wrongfully enjoyed; he must lose his proud position, and labor for their bread; he must encounter all the horrors of the most absolute poverty before I can be satisfied."

"Father, this is horrible! You will crush out all the love and reverence my sainted mother so carefully sought to instill into my heart. I do not believe now that you can be serious in this matter, or that you will load your conscience with so much guilt. We are wealthy. Even now I am at a loss how to spend the income that is mine. What do we want with your cousin's possessions? Let him live in peace. It will be a sweeter revenge than any you can take."

"Silence, boy! This is no affair for you to meddle with; and though my fond indulgence gives you much licence, beware how you abuse it by interfering in what you do not understand. I have told you my plans now, not because I wanted your advice, knowing that you would find them out on our arrival in England. The instant I set foot on my native land I shall take steps to carry out those plans, and no impertinent interference of yours can prevent their succeeding. You have mentioned your mother—another act of disobedience. 'Tis a pity you do not resemble her in mind as you do in person. I never had occasion to remind her twice of her duty. And now let this conversation cease, never to be renewed. Whatever I do I will not have questioned; and I warn you now never again to excite my anger by like conduct."

Dear reader, after such a conversation, need we say that Colonel Leicester was an overbearing tyrant—heard-hearted and revengeful, domineering, often cruel to his dependents, pitiless to his foes, feared by his friends, with but one tender spot in his heart, and that occupied by his only son.

True, the Colonel had loved his wife—a beautiful, gentle creature—who never in her life presumed to contradict him, or dared to oppose his will. But she was born to be cherished and sheltered, and the cold formality of her life withered the warm young heart pining for its mate. Her husband wished her to dress like a princess! and to please him she robed her slender figure in the richest satins; her pale brow ached under the sparkling gems that pressed it, and diamonds glittered on her fair neck and arms. But she sighed for the days when free and happy she wandered amid the hills of her "highland home," and shuddered at the thought that her grave should be made under the burning Eastern sky.

Once only did Mrs. Leicester venture to ask her husband to let her "see her home once more;" then, silenced by his cold refusal, she without a murmur submitted to her fate, and calmly resigned herself to die. It was an unexpected piece of rebellion on the part of his gentle partner, and Colonel Leicester was astonished when informed that she was no more. He had told her that he wished her to get better—in fact, she *must* get better—and she had disobeyed him; hence his sorrow was largely mingled with anger, and he forbade her name ever to be mentioned in his presence. This prohibition fell heavily on his son, who, idolizing the memory of his lost mother, could with difficulty refrain from speaking of her; and, favorite as he was, this was a fault that always drew on him his father's anger and reproach.

At the time our story opens, young Leicester was in his eighteenth year. His father did not speak the truth when he expressed a wish that he had resembled his mother in temper; for in his secret heart did the old man rejoice at the evidence of a fine manly spirit already manifested by his son. And the handsome, noble-looking youth possessed great influence over his parent, though not sufficient to turn him from his revengeful purposes. Brought up in the East, amid scenes and with habits foreign to his nature, young Leicester joyfully left his native land to seek the early home of his parents, and the knowledge of his father's purposes was the first cloud that overshadowed his happiness. One week after that conversation they landed in England.

* * * * * *

Had England been searched over, a happier man than Edward Leicester could scarcely have been found at the time we commenced this little history. The devoted husband of an excellent and amiable wife, the proud and happy father of three lovely children, the possessor of a magnificent home, and an income more than adequate to meet his utmost wishes, surrounded by friends and a prosperous tenantry, what could man wish for more?

Edward Leicester knew these privileges, and was thankful for them. No man could say that in word or deed he had offended him, and endless were the blessings bestowed on the kind landlord, the liberal master, and the firm friend. No formal ceremony, no forced show of humility, prompted the greeting that everywhere met the Leicesters, that taught the cottager's wife to courtesy, and the laborer to touch his hat at their approach. And Edward Leicester loved his people, and never lost an opportunity of increasing their comfort, and adding to their means. He built them new cottages, he planted them fruit trees, he gave them a school, and he encouraged education. His wife, no less energetic and enthusiastic, attended to other wants, and unlike many of her station, she sought for and relieved their necessities, ere she expected them to comply with all her wishes.

Again we say, a happier man, a happier family, or one that better deserved prosperity, could scarce have been found in all England. But sorrow and trial were in store, misfortune as complete as it was unexpected, and poverty as distressing as it was undeserved.

"My dear Mary, you look sad this evening. Surely, that is a scene to inspire you with pleasant thoughts." And Edward Leicester passed his arm round his wife's waist, and leading her to the open window, pointed to the lawn on which their children were merrily sporting.

"I feel sad, Edward," was the low response. "An unusual presentiment of evil has possessed me all day, nor can I look on my children without a feeling of terror."

"My dear wife, this is unusual for you," said Edward. "Certainly, at present we have no reason to apprehend any trouble; but should misfortunes come, we must meet them with fortitude. Poverty, earth's bitterest trial, we have no reason to dread."

Alas! for the confidence in earthly riches! That day week, Edward Leicester and his family were far away from the scene of their happiness, homeless, almost penniless, and with the humiliating consciousness that for many years they had been appropriating the inheritance of another.

"It is time to talk over our plans for the future, my Mary," said the unhappy husband and father, as the family gathered together on the first night after their arrival in the humble London lodging-house that must henceforth be their home. "Our means are barely sufficient for present wants, and I must lose no time in seeking employment. At present I am unable to determine what I had better try first."

"My husband, this is the cruellest blow of all," replied Mary. "Freely would I have yielded up all we loved so well—freely have endured poverty and privation; but to see you labor for our daily bread! oh, my Edward, it is hard, very hard!" And the loving wife, who without a murmur had parted with the luxuries and comforts which long use had made necessaries, wept at the thought of her husband's trials.

"Mary, you know that for years I have indulged my love of painting as an amusement, and have been called no mean artist," said Edward. "What better plan can I adopt than now to make it a source of profit?"

It was with sincere sorrow that Mrs. Leicester gave her consent to this proposal; but feeling at last that without something of the kind her children must perish from want, she smothered her grief, and her smile and kind caress cheered the heart of the weary artist when, in long after days, he was sinking under the united effects of incessant toil and repeated disappointment.

* * * * * *

Colonel Leicester felt that his revenge was complete, when those whom he had employed to watch the proceedings of the ruined family informed him that not only was his cousin laboring for an existence, but that his wife also had felt herself called on to lend her assistance, and was even then toiling day and night to meet their increasing expenses.

"Ha, revenge is sweet! Truly, this is an hour worth living for!" was his exulting exclamation on hearing of their poverty.

His son made no remark; he had long felt how useless was remonstrance. But the sum intended for the purchase of a splendid addition to his "sportsmanlike possessions" found its way to the humble home of his relatives, where it proved a seasonable and most welcome gift.

"Can Charles have relented, and taken pity on his victims?" was Edward's exclamation on beholding the bank notes.

"It is not from him. Too well do I know his implacable nature to imagine this most welcome present is his," replied Mrs. Leicester, who found it very hard to forgive the man who with abundant wealth had turned them all penniless into the world.

"Never mind, mamma, who sent it!" exclaimed little Marian, the pet of the household; "I will pray for blessings on our kind friend for sending us money to buy sister Alice medicine and brother Charley books."

The mother looked at her sick child—her delicate, beautiful Alice—on whose sensitive nature her parents' distresses had produced a most alarming effect, and a fervent benediction was bestowed on the unknown for the much needed assistance. Three months after, when Colonel Leicester heard that his cousin's eldest daughter was no more, he renewed his rejoicings with almost fiendish delight.

"You little thought when you rejected me with scorn, Mary Wyndham, that the day would come I should mock at your sorrow and rejoice at your bereavement!" he exclaimed; nor did your proud husband dream that his defeated rival would one day crush him to the dust, and exult over his fallen pride."

But Colonel Leicester was far from being at ease, even when triumphing at the success of his schemes. Knowing the generous nature of his son, he was in daily dread of hearing him avow a determination to visit his relatives, even in defiance of the curse he had threatened to pronounce on him in case of such disobedience. But young Leicester had been too early impressed with the reverence due to his parent to hazard so fearful a consequence. The dead mother's teachings were strong in his heart, and he felt compelled to content himself with occasionally sending his cousins such sums of money as he could venture on without exciting his father's suspicions. It was therefore with sincere pleasure that the Colonel gave him permission to travel for a few years in company with a most estimable gentleman about to leave his native land in search of health.

We must now pass over a space of six years, during which the relative positions of the two families were but little changed. Edward Leicester's circumstances had slightly improved; but he still found it necessary to labor at his pencil

for a maintenance. His son Charles, now nearly eighteen, was in a situation of but little profit, but which bid fair to reward him some day.

The Colonel had grown very old in that short time. He had discovered that revenge was not quite so sweet as he had at first imagined. Unpleasant thoughts would arise at times, and something very near akin to remorse, whenever he thought on the child he could not but feel his cruelty had murdered. Again it was annoying to reflect that he had made himself an object of hatred to his people; that one and all detested him, and drew unpleasant comparisons between him and their former landlord. His son, too, gave him many a heart-pang; for well he knew that, disguise it as he might, the noble young man in his inmost soul looked with horror on his father's guilty revenge. Altogether, it was not wonderful that Colonel Leicester looked old, that his hair had grown gray, and that the marks of care had come thickly on his countenance.

* * * * *

Our next scene opens on the banks of one of those beautiful "lochs," the pride of Scotland and the delight of poets. A blue sky and bright sunshine were not wanting; nor fine old trees, nor distant hills and rocks—all that artists love to paint and poets to sing of. But the loveliest object in our picture was a fair young girl, who, gazing thoughtfully on the blue waters, looked the very personification of graceful beauty. She stood on a mossy bank, one hand clasping the low drooping branch of an overhanging tree, the other carelessly holding a gipsy hat, the long blue ribbon of which trailed at her feet. Her white dress was perfectly plain, and there was something in her whole attire that showed her one who wore no ornaments; while her exceeding beauty at once told the beholder that there was little need of them.

Long she stood in silent thought, all unconscious that one was gazing on her in rapt astonishment, with quickly throbbing heart and strange emotions. But he advances a step, and the spell is broken. With a start the maiden raises her head and beholds the intruder. The next instant she makes a backward movement—her balance is lost; for a second she seems falling into the deep waters—another, and the stranger's arm is around her; he clasps her to his breast, and she feels that she is saved from a fearful death.

After such an introduction, was it likely that they should be other than friends? They met again and again in those shady walks on the banks of the beautiful loch, and Marian Leicester (for the maiden was none other than she we last saw as a child) gave her heart into the keeping of the handsome stranger. And stranger he truly was, for she did not even know the name of him who had gained so great an influence over her future life. She loved him passionately, devotedly, with all the strength of an innocent, unworldly heart; and he returned her affection with a love no less sincere and pure. Yet never for an instant did the young girl forget the duty she owed her parents. No promise would she make him, and he reverenced her for her filial respect.

"Fain would I call you mine, Marian," he said, when the time came that the maiden must return to her English home. "Happy should I be to call you my own betrothed, but I dare not ask you to do aught displeasing to your parents. All I may say is, do not forget me. We shall meet again, when I may openly avow my name, and with the sanction of your friends, claim your promise. Until then, darling, keep me in your heart, and never, never doubt my truth. I shall come to you some time. It may be very shortly—it may not be for years; but I shall come—never doubt that."

Marian promised all he asked, and then the farewell words were spoken. For one instant she was clasped to his heart, his first kiss was pressed on her brow, and they parted.

The night after her arrival at home, Marian Leicester told her parents everything. Very slightly did she allude to her feelings on the subject, but readily the mother's heart divined all her child might have expressed.

"Heaven shield my darling from the misery of a blighted, disappointed existence!" was the mother's prayer.

"Let us trust in Providence, my wife," observed her husband. "That our child loves an honorable man, his conduct proves. I am deeply grieved at the course of events, but they might have been worse. Our Marian has returned to us with recovered health and strength; let us not repine that a new love has brought light to her eyes and joy to her young heart."

The father's words seemed prophetic. Marian Leicester—the quiet, reserved Marian—was wonderfully changed. Her merry songs were ever sounding through the house; a sweet, contented smile was ever on her countenance; and her words, always kind and pleasant, now took a tenderer tone.

It was summer when she parted from her lover. For six months the remembrance of those happy days was as a pleasant dream; but Christmas came, and with it a token that another also remembered. Mr. Leicester looked sad as he perused the few lines addressed to himself; but he placed on his child's hand the costly gem which her unknown lover had requested him to allow her to accept, and though pained at the continued mystery, there was nothing he could reasonably feel displeased with in the letter itself. On the contrary, it breathed sentiments the most honorable to the stranger.

On Marian the letter and its accompanying present produced very little effect, and her father felt some surprise at her indifference. "Are you aware of the value of that ring, my child?" he said one day, looking at the sparkling gem on her finger. "Do you know that none but a very wealthy man could make you a present of so valuable a diamond?"

"I always knew he was wealthy, dear father," replied Marian, "but that makes no difference. I should have been as happy had his letter come alone. I needed nothing to remind me of my promise."

The winter passed, and when the spring came Charles Leicester received an offer from his employer to go out to China and transact business for him—an offer so good that the young man felt unable to refuse. It was a sad parting for the whole family; but none dared make objections to what was so obviously for the benefit of the beloved son and brother. After his departure, Edward Leicester's health declined visibly. He lost the energy that had hitherto characterized his endeavors to maintain his family, and again they were made to suffer all the evils of poverty.

Early in the spring they heard that Colonel Leicester and his son had returned to India, the health of the former having suffered severely from his short sojourn in his native land. The estate was given in charge of an agent. The friend, whose secret aid had so materially assisted the stricken family, appeared to have forgotten them. Marian's unknown lover preserved the strictest silence, and the summer passed sadly to the parents and child in the gloomy old house they had made their home.

Before the autumn came serious fears were entertained about the safety of the ship in which Charles had gone out as passenger. This was the crowning of their misery. Even Marian's brave heart yielded to this great sorrow; and but for one hope she would probably have given way to despair. As it was, in her deepest grief there came the remembrance of her promise, and she fought bravely with her fears, lest health and beauty should leave her. She knew that in his eyes she had been exceedingly fair—must he return to find her a miserable invalid? No, she would hope on; something whispered to her heart that her brother would yet return, and they should be happy.

The old proverb says, when affairs get to the worst they generally "take a turn for the better;" and it proved so in Edward Leicester's case. Their money all gone, himself confined to a sick bed, his wife vainly striving to earn enough to support them, and Marian worn out with anxiety and toil, nothing could be more gloomy than their prospects, when a letter arrived from Charles—a letter doubly welcome, as the token of his safety and the bearer of welcome assistance.

The same post brought another surprise in the announcement of Colonel Leicester's death, and a letter from his own hand, written on his death bed. In it he bequeathed his English property to Marian, on condition that she became the wife of his son. Of her he spoke affectionately—her parents he had evidently not forgiven.

This letter was a cruel blow to the gentle-hearted girl, and was the cause of more suffering than all her previous troubles combined. She felt that one word of hers would place her parents in affluence for ever—removing them effectually from the fear of poverty or want. But could she speak it? Could she for ever crush out of her heart all those sweet hopes that through so many trials had sustained her drooping spirits? Could she consent to marry her unknown cousin, of whom she absolutely knew nothing, and for ever banish the remembrance of him who alone could possess her heart? And must she see those dear parents, in sickness and suffering, pining for the comforts in her power to bestow? The thought was distraction.

But Edward Leicester and his wife loved their child too well to see her sacrifice herself for their benefit. The character of their young cousin was totally unknown to them, and the father had done little to prepossess them in favor of the child. Marian was forbidden to vex herself with any more questions on the subject.

"Our happiness would be dearly bought by the sacrifice of yours, my darling," whispered the mother, as she pressed her child to her bosom, and kissed away the tears from her pale cheeks.

Filled with gratitude for their unselfish kindness, the poor girl parted with the precious token she had received from her unknown lover, and with the proceeds obtained for her invalid father numerous little luxuries rendered absolutely necessary by long custom.

* * * * * *

"Marian!" She was seated in the dingy little room they called their parlor; tears were on her cheek, and painful thoughts were evidently occupying her mind; but the sound of that voice has driven them away, the tears that are now falling are tears of joy, for once more Marian is clasped to her lover's heart. "My own, have you doubted?" he continued, "despaired of my coming? forgotten your promise?"

"Never, never," she replied. "But oh, the trouble, the poverty!"

"Hush, my Marian, it is all at an end," said her lover. "No more care, no more sorrow, nought but joy and love for my beautiful bride."

With mingled feelings the father gave his consent to his daughter's bethrothal. He felt that the stranger exerted a great influence over himself, that he felt peculiarly pleased and interested in him; yet the mystery of his name was still unsolved, and that excited suspicion.

"In two days you shall know all," said the young man; "at present my anxiety to remove you from this wretched place will not admit of my now making the long explanations that will be necessary. Surely you cannot doubt me?"

Edward Leicester gazed searchingly into those truthful, earnest eyes, and felt that his fears were groundless.

It was the afternoon of the second day. For many long hours the party had traveled without rest, and Mr. Leicester and his wife were leaning wearily back in the luxurious carriage so carefully provided for the comfort of the invalid. The bright autumn sun shone in at the windows, the roads were dusty, the air was oppressive; Marian removed her bonnet. The sight of her ungloved hand appeared to suggest a thought to her companion.

"I have never seen you wear your ring, Marian," said he. "Did it not meet your approval? or is your dislike of ornaments so great?"

He was watching her attentively, and she blushed deeply at the confession she was about to make.

"I kept it through long months of poverty and distress," he replied, "and once I thought that nothing would tempt me to part with it. But a few weeks since my father saved me from a fate worse than death, and in gratitude I felt compelled to give it up, painful as the sacrifice was."

"And so it would have been 'a fate worse than death' to have married your rich cousin, would it, Marian?" said her companion. "That little speech is more precious to me than a thousand assurances of your love. But here we are at our journey's end."

Before Marian could recover from her astonishment to inquire how he had learned her well kept secret, the carriage turned into a magnificent avenue of trees, dashed past the gatekeeper's lodge, and in a few seconds drew up at the entrance of an elegant and familiar mansion.

Springing to the ground, the young man assisted his companions to alight, and then led them confused and puzzled into the house, where bowing attendants ushered them into the well remembered rooms. Edward Leicester and his family were in their old home, and to their companion they now looked for a solution of the mystery.

"This is Marian's home, and I am Bernard Leicester," was his answer to the inquiring looks and words. "My father's command, not my own will, kept up the deception. He wished to put my betrothed wife to a severe proof, and truly she has passed nobly through it; and in my new character I must strive to obliterate any lingering prejudices she may entertain against a marriage with her rich cousin."

Daniel Webster on the Death of his Wife.

THE following letter from this eminent statesman, affords the surest evidence of the greatness of his mind, and it will be read with interest. It is in his private correspondence, and recently published. We copy the letter from the Boston Transcript:

WASHINGTON, March 21, 1828.

My Dear Nephew: I thank you for your kind and affectionate letter, and assure you its suggestions are all in strict accordance with my own feelings. It does not appear to me to be unreasonable that the friendships of this life are perpetuated in heaven. Flesh and blood, indeed, cannot inherit the kingdom of God, but I know not why that which constitutes a pure source of happiness on earth, individual affection and love, may not survive the tomb. Indeed, is not the principle of happiness to the sentient being essentially the same in heaven and on earth! The love of God and of the good beings whom he has created, and the admiration of the material universe which he has formed, can there be other sources of happiness than those to the human mind, unless it is to alter the whole structure and character?

And again, it may be asked, how can this world be rightly called a scene of probation and discipline, if these affections, which we are commanded to cherish and cultivate here, are to leave us on the threshold of the other world? These views, and many others, would seem to lead to the belief that earthly affections purified and exalted are fit to carry with us to the abode of the blessed. Yet it must be confessed that there are some things in the New Testament which may possibly countenance a different conclusion. The words of our Savior, especially in regard to the woman who had seven husbands, deserve deep reflection.

I am free to confess that some descriptions of heavenly happiness are so ethereal and sublimated as to fill me with a strange sort of terror. Even that which you quote, that our departed friends "are as the angels of God," penetrates my soul with a dreadful emotion. Like an angel of God, indeed, I hope she is in purity, in happiness, and in immortality; but I would fain hope that in kind remembrance of those she has left in a lingering human sympathy and human love, she may yet be as God originally created her, a little lower than the angels.

My dear nephew, I cannot pursue these thoughts nor turn back to see what I have written.

Adieu, D. W.

INFLUENCE OF THE NEWSPAPER.—Thinking men often deplore the frivolous nature of the reading of our age, and the waste of time and intellect over the countless newspapers which find their way into the counting room and the parlor. But there is a bright, as well as dark side to the picture, and papers conducted with eminent ability are important educators of a nation. The poet Croly speaks in the following eulogistic strain of the daily and weekly press:

"The newspaper, the most influential of all human words, is the creation of printing. It is to the honor of England that, in this country, it approaches nearest to excellence, in intellectual vigor, in variety of knowledge, in extent of information and patriotic principle. It has, like all the works of man, occasional imperfections, and, perhaps, the most prominent are its too minute details of offences against public purity. But there is scarcely a newspaper in this age which would not have been regarded as a triumph of ability in the last. In fact, the newspaper of England is the great practical teacher of the people. Its constant and universal teaching alone accounts for the superior intelligence of the population. Schools, lecture rooms and universities, important as they all are, altogether fall behind it in public effect, or find that to retain their influence, they must follow in its steps.

Those steps may now and then turn from the right road, but their native tendency is forward and upward. This intellectual giant always advances, and carries the country with him to a hight which no other country, ancient or modern, ever attained, or, perhaps, ever hoped to attain. If, in an age of foreign convulsion, England has undergone no catastrophe—if, in the fall of monarchies, she has preserved her hereditary throne—if, in the mingled infidelity and superstition of the continent, which, like the mingled fetters and frenzy of a lunatic hospital, have, in our day exhibited the lowest humiliation of our nature, she has preserved her freedom and her religion—I attribute all, under God, to the vigor and intelligence of public investigation, the incessant urgency of appeal to the public mind, the living organization of which the heart is the Press of England.

A HARD HIT.—In our village we have a man who makes himself very unpopular, and, I may say, very odious, by his everlasting fault-finding with other people. He is a good man, perhaps; but if he sees anything in one of the other members of the church that he can take hold of, he talks about it, and harps upon it, and makes it twice as bad as it was, or would have been but for his censorious meddling with the motes in other people's eyes. His name is Sharp, and well it might be. Not far from him—indeed there is only a garden between the houses—lives Mr. Davis, an offensive, good man, who would be very slow to do wrong at any time, and has a fear of Mr. Sharp's tongue before him at all times. It happened during that coldest snap in last December, that by Sunday afternoon they had burnt all the wood that Mr. Davis had provided on Saturday, and he must go out to the pile and cut some more; or the children would suffer, and perhaps be seriously injured by the cold. After some hesitation, but seeing no alternative, Davis took his ax, and keeping one eye out at Sharp's house, and one on his work, he soon had an armful cut, which he was just picking up as some one spoke to him from the road-side.

"I say, Mr. Davis!"

He dropped the wood, and, looking up, cried: "Oh, Smith! Ah!—Yes, Mr. Smith! Cold day, Mr. Smith; glad to see you; thought at first it was old Sharp.

"Well, what if it was?"

"Why, you see, I wouldn't just like, you know to have Sharp see me chopping wood on Sunday."

"But, neighbor Davis," said Mr. Smith, "don't you think the Lord will see you?"

"Oh, yes, I suppose its likely he will; but then *he wont make such a dreadful fuss about it.*"

CARRIAGE TOPS.—R. S. Jennings, of Waterbury, Ct., has obtained a patent for an improvement in a carriage top, which is so constructed that it can be readily put on and taken off a vehicle, and then completely folded when not required for use. Such a top can also be expanded and adjusted to suit the seat of the carriage.

TRAVELING.

California Steam Navigation Company.

ARRANGEMENT FOR MARCH 1st, 1857.

Departure from Jackson street wharf, at 4 o'clock, P. M.

CARRYING UNITED STATES MAIL.

Steamer NEW WORLD, Capt. Samuel Seymour;
" ANTELOPE, Capt. E. A. Poole;
" CONFIDENCE,
" WILSON G. HUNT,
" HELEN HENSLEY Capt. E. C. M. Chadwick;
" J. BRAGDON, Capt. Thos. Seeley;
" URILDA, Capt. E. Z. Clark;
" CORNELIA, Capt. E. Conckiin.

One of the above steamers will leave Jackson street Wharf every day at 4 o'clock P. M., (Sundays excepted,) for

Sacramento and Stockton,

Connecting with the light draft steamers for

Marysville, Colusa, and Red Bluffs,

For further particulars inquire at the Office of the Company corner of Jackson and Front streets.

The Most Successful and the Best,

NOW COMPLETE AND FOR SALE,

SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

BY EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo. pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco.

The Pioneer Gen. Sutter.

READ the following:

Gen. Sutter.—It is stated that by the recent sale of Hock Farm, Gen. Sutter will be better off than he has been for some time. He is comfortably provided for, and will not lose the premises on which he has been residing.

This consoling paragraph we clip from the Town Talk; we ask for it a careful and considerate reading, and this paragraph is to go as a kind of *balm* for another, which has been the rounds of the public journals that Hock Farm was sold by the Sheriff. Read these words again! *Hock Farm sold by the Sheriff!* Has the State of California no heart? Have the people of California forgotten their early benefactor? Have they no gratitude? Where are the hundreds and thousands that were fed, clothed and cared for, in the early days of California? Where are those who made their pilgrimage to Sutter's Fort, as the first object of their attainment when they landed upon the banks of the Sacramento?—if these are all silenced by death, where are those men who have been made rich by the possessions they have acquired through the liberality of our early and generous pioneer?

Yes, where are those who now are counting the wealth, that would never have been their's, had it not been for Gen. Sutter! What a burning shame upon California! what a stain upon the people of our State! what a blot upon our whole country, that the man through whose instrumentality a nation has been made rich, should now in his declining years when his locks are silvered with age, should have the finest and tenderest feelings of his soul tortured by seeing his homestead advertised by a sheriff. Where is all our boasted munificence and liberality—where our justice? Where those friends that have feasted upon his bounty and fattened at his table? Where are those rich cormorants that have gone—gone where the heartless ever go; gone where there is more plunder, but a voice will speak to them—we hear it now, saying, "your riches are corrupted, your gold is cankered, and your garments are moth-eaten." Go to, now, ye *rich* men, for the day of your punishment is nigh. God grant it may be speedy, for the world never saw a case of deeper or more cruel wrong than that which is now being permitted upon the property, happiness and rights of this noble pioneer of California, Gen. Sutter.

Had Gen. Sutter been like most men, when the gold was discovered at his mill, he could now have been worth ten millions of dollars; but behold him now—poor in purse, but rich in remembrances; for he can recall many thousand voices that now slumber in the grave, that in the final day of accounts will say of him: I was an hungered and ye gave me meat; I was thirsty and ye gave me drink; I was naked and ye clothed me; a stranger and ye took me in; sick and ye ministered to me; and oh, these are glorious remembrances—these are indeed a kind of gold that will not canker, either in this world or the next.

But we ask the people of California to look upon the picture we have presented to them. Gen. Sutter, through whose own means that gold was found which has changed the destinies of a world, is now permitted to suffer those agonies which must even touch noble minds when placed as he has been placed, and scarce a voice is raised in his defense. Can a State or a people be just, that will thus permit such a wrong? Can a nation prosper that sits silently by and permits it? England honored the man that *accidentally* found gold in Australia; aye, honored him publicly, and gave him a pension for life, and what has California done for General Sutter, but rob him of his own, and what has the United States done for the man whose discoveries have saved her and Europe from universal bankruptcy?

We ask these questions in all seriousness, and wait reply. Some persons may think them of little matter, but we believe that Heaven will not suffer the deep and cruel wrong which has been done to this generous and self-sacrificing man to go unpunished upon our State; and the speedier the work of restitution commences the better for our country.

SUCCESS FOR THE FARMER.—In no way can the farmer be more sure of success, than by the rapid communication of all the information that is needed to secure that success: all improvements in machinery, in the manner of cultivation of the soil, and by the interchange of practical experiments among farmers; and in no better way can this be done, than through the columns of a paper devoted to their interests. We know our journal can be made such a medium far and wide, and we appeal to all cultivators of the soil for their co-operation. How much can each one of our subscribers do for us? The good will revert upon themselves. Shall we hear from them? By their influence among their neighbors, each subscriber can send us a list.

Letter from Rev. E. Corwin.

WE take pleasure in presenting to our readers the following very interesting letter from Rev. Eli Corwin, the Recording Secretary of the State Agricultural Society, the last year, now in New York. The views presented by Mr. Corwin demand the attention of our readers in California. The richest country in the world! endowed by Nature with all that the heart of man can ask! rich in mineral wealth; unequaled in fertility of soil and climate; abounding in beauty on every hand, yet, at this moment, California stands before the Author of these gifts, before the world, as did the Prodigal Son, when he was an hungered, and as did Esau when he had sold his birthright for a mess of pottage. Californians have had a rich inheritance; but it has been wasted—wasted in profligacy, as was the substance of the Prodigal, which was given him by his indulgent parent. What is to be done? "I will repent," should be the word of every California workingman, every merchant, every shipowner, every real estate owner, and every head of a household; and they should say, "I will arise," and I will go straightway and give all my energy in developing the home manufactures and home products of our soil; aye, I will *patronize home productions first!* This is the kind of repentance now wanting to save California from irretrievable ruin!

Read the letter of Mr. Corwin! See the numerous ways in which our country could be made rich by encouraging home manufactures! We know our readers will remember that we urged the building of starch factories during the period of the great waste of the crop of potatoes in '53 and '54. We know too we have urged ropewalks, paper-mills, and other manufactories; and we have had the pleasure to see ropewalks and paper-mills established, and are proud to say that the CALIFORNIA FARMER is printed on paper of home manufacture; we only wish that every citizen would as cheerfully make the same effort to aid our home manufactures as we do.

But our readers will read the following letter, and if they will think aright, and act aright, we shall not have spoken in vain.

We return sincere thanks to Rev. Mr. Corwin, and hope to hear from him often. Such information will do our citizens good.

NEWBURGH, New York, April 20, 1857.

MY DEAR FARMER: The severity of the snow-storm, which even at this unseasonable date is falling, shuts me up for a day, when I had hoped to be upon the road, and so I have an hour to chat with you.

Accustomed to notice the ways of men, in all departments of business life, while dwelling in the Golden State, I have remarked what a reckless and wasteful spirit there characterized the people in almost every position. The feverish haste in which men pursue wealth, as the great end of life; taking the shortest route, and with desperate strokes cutting the way through to fortune, has taken possession even of the old, staid farmers in that fast country. Few, very few, in any business, are content to make a good honest living. A competency is not a sufficiency. Hence, in the agricultural districts an almost universal mania for large landed estates; and hence, too, the turning of a legitimate, safe and peaceful pursuit into a reckless speculation. Under this high-pressure system immense sums are first expended in lands, heavy expenses are then incurred for implements, seeds, and hands to put in the crop; moneys are borrowed at extravagant rates of interest. The venture is large, and perhaps the harvest is gathered only to satisfy the mortgages of greedy and relentless creditors. The capitalist absorbs the fruits of toil: and all the while the borrower is servant to the lender. Is it any strange that most of the large farmers who have to any considerable extent operated upon borrowed capital have failed to survive the fluctuations of the last three or four years?

Let farming be dissevered from speculation, and let each one carry on the business only according to his means, and there is no reason why, as a class, farmers should not eventually be among the most prosperous and wealthy citizens of California. Nature certainly could not be required to do more. Soil and climate are all that we could desire. Mortgages and interests and sheriffs are the demons that haunt and torment the man who works upon borrowed capital. Moreover, that moderation which discourages speculative farming does not involve the danger of loss from the overstocking of the market.

Industry best developes the resources of a country; the masses become more intelligent; property is more valuable, and society is better where each man is the lord of his own estate, and not where many serfs are under the control of a few large landholders. Let our men of moderate means be content to work a small farm well, and when from the proceeds of their well-directed labor they succeed in accumulating a surplus fund for investment, let them combine their energies and their capital for the erection of the various factories which are needed, and which by working up the products of the farm into certain useful articles of traffic increase the demand for what the farmer can raise. Everything of this kind which tends to stop the drainage of coin from the State for necessary manufactured articles, and at the same time affords a market for the raw material which the farm produces, must prove of double advantage to the farmer who engages in such manufacturing. For while he shares the profits of the factory, the profits of farming are also increased.

Thus, if three years ago a starch factory had been erected in Santa Clara or Alameda county, who doubts that the surplus potatoes which rotted upon the ground, and the wheat which was shipped out of the country, might have found a ready and paying market: and that the consumers of starch, all along the Pacific Coast, might have been supplied with a superior article at a reduced price.

The Beet Sugar operation, at present contemplated, points in the same direction. So of the Paper Mills which have been so much needed in a country where rags are so plentiful and paper is so high.

And what hinders that some enterprising man in Los Angeles should make his fortune by supplying the California market with a cheaper if not a better article of preserved fruits, such as citron, citron-lemon, pomegranates, grapes, peaches, pears, olives, white figs, &c. &c., which there may be produced in such profusion.

These are but hints with reference to the direction in which the surplus capital of our thrifty farmers might be profitably employed.

By far too much gold is still shipped East, to pay for what ought to be produced upon our own soil. Is it not strange that soap and candles, and leather, should still be shipped to a country where hides and tallow, and ashes are so plentiful?

By the way, let me ask, what is the prospect for obtaining in California wood of sufficient toughness and fineness of grain to answer the purpose of the wheelwright, and the manufacturer and repairer of agricultural implements? The manufactured article and the raw material in this department are now almost solely procured by way of Cape Horn. I have seen no oak or other hard wood in California that was not of too rapid a growth and too brittle for service. Let every man in California be as wide awake to discover and develop the resources of that most wonderful of States, as each one now is to forward his own selfish ends, and no man can predict the results which in a few years shall be attained.

Yours for California, E. C.

Fine grained timber of various kinds has been found here, of which we shall speak.—[ED.

The Editor's Card.

WE would ask an especial favor of our friends in every county—we want their aid in a plan which we trust will do our State some service, and make her character and resources better known. Will our Grain growers and Haymakers aid us? Will our Farmers aid us? Will our Miners, Mechanics, Manufacturers, and all other friends of the industry of the State, aid us? The following is our plan, and these are our wants:

We want a collection of Grains from every county in the State, both in the sheaf and in the grain; we desire the best specimens of every county, and of every farm, if we can have them—a sheaf of an hundred and fifty head, and full length of the straw; also about one quart of the same grain, cleaned. We want Barley, Wheat and Oats, and all new species of Grains and Grasses. We would like rare specimens of Vegetables in their seasons, and Fruits; specimens of Minerals, petrified Acorns, or Seed of Trees, or whatever is curious. The object of such articles, especially the grains and products of the soil, as well as all others, is to have them shown at the different Exhibitions of the States, and in Europe, that the character, productions and resources of California may be truly known, and thus induce an emigration of the right character.

As this object is one of a public nature, and intended to accomplish a great public benefit, we shall hope our friends will aid us in this enterprise. We shall keep a record of every contribution, and their kindness will be remembered, and their donations made known abroad as well as at home. All who are pleased to respond to our call, will please pack Grains and Grasses carefully in boxes, so as to preserve the grains perfect, and let them be so far ripe as not to mold—but not too ripe; other samples can come in bags or boxes. Forward by Express, and we will cheerfully pay all charges on boxes, etc., and quickly acknowledge receipt of same through our journal, and with our grateful thanks to those who aid us in this enterprise. Direct to our Office, at San Francisco.

GREEN VALLEY.—"*Katie is my darling.*" One of the most beautiful valleys in any State is the one named above, now in the possession of one of the early pioneers of California, Col. J. M. Harbin, whose liberality is proverbial. We spent a few days there after our visit to Suisun, and on our way to Sonoma. We shall in our next issue speak of this magnificent spot; what we saw, what we enjoyed, and the kindness of the proprietor, whose courtesy and liberality are not forgotten. For the liberal gift of our noble steed, our pet Kate, we have something to say, in a brief time, and shall also give a sketch of Suisun, its rapid advance, and of Sonoma, the residence of Gen. Vallejo, and other handsome spots in these vicinities.

THE UPPER SACRAMENTO.—After we had visited the famed ranch of Bidwell, of which we gave an account last week, we returned by a different route, visiting all the best ranches and places of note, an account of which will be continued at the earliest moment. We returned to Oroville after a pleasant trip of several days, and was particularly fortunate in having been supplied, by Q. E. Emerson, Esq., with a very splendid saddle-horse, fully and handsomely caparisoned, a beautiful creature, the special favorite of his lady, to whose courtesy also we were indebted. Our ride in the saddle will long be remembered, and our gratitude is hereby tendered for the kindness received.

OUR ADVERTISING COLUMNS.—Will our readers please review our advertising columns and examine our new advertisements. Messrs. Clark & Co.'s furniture card; Hewlett & Collins, of Stockton; the new and valuable list of books offered by S. S. & W. Wood, and others from the East. We believe we offer the best list of advertisements, and have the best medium for advertising, in this State.

Stockton Asylum.

WHILE in Stockton the past week, we were induced to visit this important Institution. The new wing has been added and is nearly ready to receive patients, which will greatly enlarge the means of usefulness of the institution. We hope the needed means will soon be forthcoming to improve the old wing, so as to have it correspond with the new one; it will then make this one of the finest buildings in the State. We hope too, the grounds round the buildings may not long remain unimproved. They should be made beautiful. We hope the offensive and unfit Cottonwoods will be removed, and Locusts, Evergreen Oaks, and other native trees, may be substituted for trees unfit for such a place. The garden of this institution might be made beautiful, and should be; for everything that strikes the eye of even a lunatic as beautiful has an alleviating effect.

We were politely shown over a part of the building by Mr. McPherson. What we saw indicated care and attention, cleanliness and order. Yet our heart was made sad at this terrible wreck and ruin of mind. We very much regretted to learn that *one part* of the male department, and the *whole* of the *female department* were closed against *visitors*, and the reason assigned was that they were so furious as to make it dangerous. Surely, thought we, there must be something more terrible in lunacy now than there was a year ago; for then we were permitted to visit *all* the institution, and we *then* found it quiet and peaceable as could be expected; even the most furious were under authority and yielded to a word. We very much regretted that we could not visit all the departments, as our object was to see and note such facts connected with a public institution as a public journalist should know; and surely, thought we, those poor unfortunates would *not* harm an editor; but we were not permitted to see them, on account of their fury.

We regretted also that *ladies* present could not be permitted to visit their own sex; for it is by such a visit that the heart of sympathy is drawn to the suffering, and we rarely ever knew of a woman, however crazy, that did not yield to the kind attentions of her own sex.

Our visit was short, as the most important part of it, to those most affected by lunacy, was the object of our deepest regard. We regretted we did not have the opportunity of seeing any of those who had charge of the Institution, save Mr. McPherson.

We look upon this Institution as one of the most important in our State. The *predisposition* to lunacy so prevalent here, from the intensity of men's minds to a given pursuit, demands all the best, most wise, and most human energies of our government, and we were surprised to find that the *two chief departments* of this Institution were so materially changed in condition, from what they were when we visited it the last year. We know not the cause, but we know the facts. Then, *all was open*, visitors were attended by the Physician and Matron in their respective wards; then, however furious—a look, a word, and quiet came; then, kindred, friends, all who felt a heart beat for suffering humanity, could see, feel and act for its relief; and we remember well the deep and earnest interest manifested to us by Dr. Reid and his lady, under whose superintendence the Asylum had been for some four years. But now, we find that the inmates are ofttimes furious and do damage to themselves and to those who attend them; such we learned from our attendant, and for this reason none are admitted unless they are the kindred of those confined. We cannot believe that this is right, for it was the *first time* we were ever debarred from visiting with the keeper, those of the most furious of the maniacs, and we have visited asylums in many States and in Europe. We cannot but fear that either we have in the asylum a more terrible set of patients, or their cases are materially misunderstood; for we have been taught to believe that a pleasant countenance and a kind word are ever like sunshine to a darkened mind; and our lessons upon lunacy were received from one whose name will ever be hailed as the most enlightened friend and best benefactor of poor reason-dethroned humanity, we mean Dr. Woodward, of the Lunatic Asylum of Worcester, Mass., and his opinion we know is beyond question on this subject.

STATE FAIR AT STOCKTON.—We are happy to renew the assurances we have given of the interest felt at Stockton for the coming State Fair. We can reiterate very strongly that the merchants and traders of Stockton, the manufacturers and mechanics, the farmers and stock rancheros, and in fact all the citizens, are determined to have the present State Fair surpass that of any previous exhibition. We are happy to notice the interest felt in the social circles to make the coming Fair one of peculiar interest in this respect. Great credit is due to the ladies of Stockton for the interest they manifest.

THE MECHANCS' INFLUENCE.—How much can the Mechanics do for their own elevation and prosperity, by co-operating with us and aiding in the circulation of our paper. We know we have always been the friend of the Mechanic and of every workingman, and we only ask that Mechanics should recognize our journal as their steadfast friend, and surely they can do much to widen our circulation, and thus make known their own wants and aid themselves in their own enterprise. Who will act? We hope the answer will be, every one.

WOOL-GROWING IN THE SOUTH.—A gentleman who has been engaged in the wool-growing business in Tennessee, and who has recently traversed Northern Alabama, informs the Mobile Tribune that the raising of sheep in that State would be more profitable than the culture of cotton. Thousands of acres, fit for nothing else but sheep pastures, could be had for 12½ cents per acre.

Hewlett & Collins' Agricultural Warehouse—Stockton.

THIS old pioneer warehouse is now so widely known in San Joaquin county that we need hardly name them; yet, as our journal is so widely circulated in that section, we feel it a duty to show our readers, and all who patronize this house, that they can always be supplied to an indefinite amount with goods in almost every line of heavy merchandise. We were somewhat surprised at the extent of business transacted by this house, but being kindly furnished with items, in order to show the extent of the agriculture of the county, we collected the following:—Messrs. H. & C. have sold the past year 300 plows, 50 harrows, 25 reapers, 15 threshers, 12 mowers, and other implements in proportion, some 1000 pounds vegetable seed, and seed grain almost beyond computation. We were pleased to note one important fact relative to *subsoil plowing*; in 1855 they sold *one* subsoil plow, in 1856 *ten*, and this season, thus far, *fifteen*, showing a great advance in the most important system of plowing. They have also sold many side-hill plows.

Messrs. H. & C. are large importers of hay and straw-cutters, and machinery of all kinds, cordage, bale rope, blocks and tackle for ferrys and mining purposes, cement &c. This house also supplies, by a contract, the Steam Navigation Company with all their wood. This they receive from their country trade. They have a coal yard also, and large warehouses filled with produce of all kinds.

Messrs. Hewlett & Collins have been in trade for over six years, and by their strict attention to business, their known integrity and uprightness, have won an enviable name and position, and now can command the heaviest trade in their line of any house in that section of country. It is only necessary for us to refer our readers to our advertising columns, so show the important branches of trade in which they are engaged, and to say to our patrons that they will find it for their interest to call on Messrs. H. & C. when they visit Stockton.

FINE TEAMS.—It will be recollected that some three weeks since, on a visit to Stockton, we made mention of large teams that we saw, and mentioned the value of teams and mules. As some persons can hardly believe that a good team and animals could be worth a good farm, as we mentioned, we will simply say that we took pains to visit one of the yards at Stockton, where we heard of a fine team. We saw the eight fine mules and the wagon, and gathered the following facts. The owner hauled, the past season, upon this one wagon, with his eight mules, *twenty-one thousand and ninety-four pounds*. For one pair of the mules he paid $1300. The other three pair are all most excellent animals; large, sleek, sprightly, and splendid mules. A better team was never seen, and when ready harnessed to the elegant wagon—a majestic one, white body tipped with red, like a coach, and worth $8000, the lowest price that would purchase it—we do not think it could be beat in the world. This wagon is called the "Independent," and is owned by C. H. Huffman, Esq. Mr. Huffman sold a fine team, some time since, of but little less power, for $7000.

The teamsters of Stockton have a laudable pride in their business, and their animals are kept as nice as coach-horses, and fed better. The feed of eight mules was, for each day, 170 pounds barley, and 140 pounds hay; this is good keeping.

P. S. Since writing the above we learn that the heavy load mentioned above was from the farm of Judge Wier; a part of his wheat; and was drawn to Messrs. Hewlett & Collins of Stockton. The value of this load of wheat was $750; only about the value of a country farm. What will our Eastern friends say of a load of grain of such value? and the team worth $8000? Yet such are the facts.

SPLENDID FRUITS.—We received from Jas. Henderson, Esq., Pomona Gardens, at the Mission Dolores, a box of the most superb strawberries we have ever seen. We learn from Mr. H. that they were gathered from vines planted last December. This fruit was generally cox-comb shaped, of extraordinary size, fully ripe and delicious. The berries measured from four and a half to six and a quarter inches in circumference. Such fruit is worthy of special note. Our thanks to Mr. H. for the splendid fruit and for a kind invitation to visit his gardens, which we shall accept.

We received, some days since, a collection of very large gooseberries; they were of very superior size and quality. We believe they came from the Oakland side. We regret that the name of the kind donor was lost, else we should return our thanks in person, to see his crop; he will please to accept them however. The fruit was as large as pigeon's eggs.

THE BIG WAGON, STOCKTON.—One of the big wagons, which we spoke about some two weeks since, at Stockton, is now nearly finished. We saw it in the paint shop in process of tipping and striping. The body panels of the wagon are of a handsome dark blue, the other parts brown; bands striped; wheels, axles, pole and running gear yellow, and striped with black; all finely varnished. When finished, it will be the handsomest team in California. The value of this wagon is one thousand dollars. It was built at Miller's wagon shop, as previously mentioned.

SHEEP, when first turned out to grass in the spring, should be housed on cold nights. If troubled with the scours, drench with half a pint of milk porridge, thickened with two tablespoonsful of wheaten flour. We have rarely known this remedy to fail. If two or three doses do not effect a cure in as many days, add ten drops of laudanum.

SPECIAL NOTICES.

☞ **ALAMEDA COUNTY AGRICULTURAL SOCIETY.**—The Committee appointed at a primary meeting of the farmers of Alameda County, to draft a Constitution and By-Laws for the organization of an Agricultural Society, having notified the undersigned that they are prepared to submit the result of their labors, notice is hereby given that a meeting will be held at the ESTUDILLO HOUSE, in San Leandro, on SATURDAY EVENING, June 6th, at 7 o'clock, to hear said report and take action thereon.

A general meeting and punctual attendance of farmers and others interested is most respectfully requested.

HENRY SMITH,
Chairman of Primary Meeting.

San Leandro, Alameda County, May 23, 1857. v7-20 2t

☞ **WHAT CHEER HOUSE,**
MAY 27TH, 1857.

CITY AND COUNTY OF SAN FRANCISCO, State of California.

KNOW all People by these presents that R. B. WOODWARD Proprietor of the above named establishment, hereby announces that from and after this date his scale of prices shall be as following reduced rates to wit:

BOARD, Per Week, SIX DOLLARS.
BOARD, Per Day, ONE DOLLAR.
MEALS, FIFTY CENTS Each.
LODGINGS, Per Night, FIFTY AND SEVENTY-FIVE CTS.

French Patent Spring Beds, with best of Curled Hair Mattresses, Clean Bedding, &c., has gained a lasting and world-wide notoriety for the superior and celebrated Lodgings to be had at the What Cheer House.

In addition to the above, there is also a spacious Reading Room (well supplied with papers from all parts) in connection with the extensive Library of over two thousand volumes of the choicest selection of standard works.

Determined and untiring efforts to please and furnish the very best of fare at the lowest prices, backed up by a rigid adherence to the cash system, has made the What Cheer House the best and most popular establishment on the Pacific Coast, for which the public will please to accept the thanks of

R. B. WOODWARD, Proprietor.

Nos. 119 and 121 Sacramento street; and
Nos. 27, 29 and 91 (new addition), Leidesdorff street. v7-20

Fine, beautiful hair—jet black or brown;
Or tresses, curling and golden—
Is the certain result—without chance or doubt—
Of the use of LYON'S KATHAIRON.

The immense sale of **LYON'S KATHAIRON**—nearly 1,000,000 bottles per year—proves its excellence and universal popularity. It restores the Hair after it has fallen out, invigorates and beautifies it—making it soft, curly and glossy—cleanses it from all Scurf and Dandruff, and imparts to it a delightful perfume. The Ladies universally pronounce it the finest and most agreeable article ever used. Sold by all dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers, San Francisco. 20-1m

☞ **RATS—ROACHES—BED BUGS, &c.—**

The *London Quarterly Review*,
The *New York Daily State Register*, and others on
"COSTAR'S" Rat, Roach, &c., EXTERMINATOR,
"COSTAR'S" Bed Bug EXTERMINATOR,
"COSTAR'S" ELECTRIC POWDER, for Ants, &c.

The London Quarterly Review contains near a column, and the New York Daily State Register, of April 27th, says: "The French Government does not permit rats to be killed in any other manner except by 'Costar's Rat Exterminator,' which is sold (in this city) at No. 382 Broadway;" and again, in issue of May 1st: "No judicious housekeeper should defer purchasing a supply of this invaluable remedy for clearing their houses of all kinds of vermin. With all confidence we can recommend it as an indispensable article for every family."

The New York Journal, for April, has the following: "'Costar's' Remedies for all domestic pests, such as Rats, Cock-Roaches, Bed Bugs, Ants, Fleas, &c., are said to be invaluable; indeed, we can speak from actual knowledge of their rare merits. The name of 'Costar' is a 'household word' to New Yorkers, and his Depot, No. 382 Broadway, is thronged by thousands daily. As the summer approaches we advise every one who would be rid of the above named pests, to send and procure a timely supply of the *Exterminator*. Druggists and Dealers also should send their orders early if they would secure a trade in articles for which there is a *constant demand*, and on which a fair profit may be realized."

☞ See advertisement in another column. v7-20 3m

☞ **OXYGENATED BITTERS**—*A Sure Cure for Dyspepsia.*—The history of this remarkable medicine, and its astonishing success in obstinate cases of DYSPEPSIA, ASTHMA, AND GENERAL DEBILITY OF THE SYSTEM, places it among the most wonderful discoveries in medical science, and has given it a reputation far beyond any remedy known for these complaints, in all their various forms.

The *Oxygenated Bitters* contain nothing which can intoxicate; and the medicine has no similarity whatever to the various alcoholic mixtures disguised as "Bitters," being purely a medicinal compound, in which are combined the most valuable remedial agents, and a peculiar oxygenated property, hitherto unknown, but highly efficacious in all complaints arising from weakness and derangement, or prostration of the stomach and system generally. It is a mild and agreeable tonic, removing all disagreeable symptoms, and assisting nature in her efforts to restore the impaired powers of the system.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORAILL, cor. Third and K sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 20-1m

☞ **JOSEPH GILLOTT'S STEEL PENS.**—These popular Pens are to be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Thirty years' experience in the manufacture will, it is hoped, be a sufficient guarantee that every effort will be made to maintain the reputation of these articles. Those of *Standard Quality*, only, are allowed to issue from the Manufactory.

Each box contains a warrant, bearing a *fac simile* of Joseph Gillott's signature.

Manufactory and Warehouse,
91 John street, New York.
HENRY OWEN, Agent. v7-15 3m

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

☞ **BEAUTIFUL GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

v7-10 WARREN & CO.

BOOKS, &c.

SAMUEL S. & WILLIAM WOOD,
BOOKSELLERS,
PUBLISHERS AND STATIONERS,
389 BROADWAY,
NEW YORK,

ARE continually adding to their extensive stock, by importation from England and France, as well as American Works, which they offer on reasonable terms.

Merchants dealing in Books will be served at low prices.

LIBRARIES for Towns, District Schools, or Clubs, furnished at wholesale prices.

School, Classical, Theological and Miscellaneous Books;
Bibles in great variety, in plain and fancy bindings;
Elegantly Illustrated Books, suitable for presents;
Blank Account Books of all kinds; Globes,
Maps, Atlases; Writing, Letter and Note
Papers; Envelope and Wrapping
Papers; Buff, White and Fancy
Envelopes; Stationery of
various kinds, &c., &c.

MEDICAL BOOKS.

S. S. & W. WOOD,
389 Broadway, New York,

Have the largest assortment of Medical Books to be found in the country, amongst which will be found not only the works of the day, text books for colleges, &c., but a great variety of finely illustrated works on Diseases of the Eye, Skin, Kidneys, Surgical Anatomy, Botanical Plates, Anatomical and Obstetrical Plates, works of the Fathers in Medicine, &c., &c.

☞ *Catalogues of their entire Stock sent free of postage to applicants.*

Amongst their stock are the following valuable periodicals, which they offer at the low prices affixed, delivered in New York:

Duncan's Medical Commentaries, from commencement to 1795. 20 vols, 8vo. half calf.....$10 00
London Medical Gazette, from commencement to 1849. 43 vols, half calf, *very fine copy*.....50 00
London Lancet, from commencement to 1844. 46 vols bound in 42, 8vo, half calf, *fine copy*.....70 00
London Pharmaceutical Journal, from commencement to 1855. 14 vols, half calf, *very fine copy*.....35 00
Transactions of the Provincial Medical and Surgical Association, numerous colored plates, from commencement to 1851. 18 vols, half Morrocco, *very fine copy*.....35 00
Sydenham Society Publications, from commencement to 1856. 37 vols 8vo and 1 vol. folio, full cloth, gilt tops, fine copy.....100 00
Complete sets of these works are rarely for sale; several of the volumes being out of print.
Medico-Chirurgical Review, from 1816 to 1847. 58 vols, half sheep, not quite uniform.....85 00
This set includes 7 vols, edited by Drs. Shearman, Johnson and Palmer, which have been long out of print.
American Journal of Insanity, from commencement to 1856. 12 vols, bound in 6, sheep.....15 00
Ranking's Half Yearly Extract of Medical Sciences. 1846 to to 1855. 10 vols, half cloth.....7 00
New York Lancet. Edited by Dr. Houston. 2 vols, half sheep.....2 50
Containing Lectures of Professors Mott, Revere, Stevens, Swett; also Drs. Detmold, Forry, Marshall Hall, John Hunter, &c.
New York Medico-Chirurgical Bulletin. Edited by Dr. Bushe. 2 vols in 1, all published, half calf.....1 50
Journal of Health. By an Association of Physicians. 1829 to to 1833. 4 vols, all published, sheep.....3 00
London Lancet for 1845, reprint. 2 vols, cloth.....1 50

The following will be sent to any part of California by mail, free of postage, at the prices affixed:

Bedford's Diseases of Women and Children. 4th ed...$3 50
"Eminently practical, and therefore valuable as a contribution to medical knowledge."—[Southern Med. and Surg. Journal.
"The most valuable work on the subject ever presented to profession."—[Cincinnati Med. Journal.
Hassall's Microscopic Anatomy of the Human Body in Health and Disease. With colored plates. 2 vols.....8 00
"Pre-eminently the best illustrated microscopic human anatomy that is accessible to us in this country."—[Medical Examiner.
Comstock's and Coming's Principles of Physiology. With colored plates.....3 50
"It is a fascinating book for man, woman or child."—[Boston Med. and Surg. Journal.
Smith's Treatise on Fractures in the vicinity of Joints. 191 illustrations.....4 50
"One of the most valuable works which has ever issued from the press on the subject of fractures."—[Ranking's Abstract.
Harrison's Text Book of Anatomy. Second Edition. With engravings.....3 00
"Such a one as every student should possess."—[Ohio Med. and Surg. Journal.
Vidal on the Venereal Disease. Edited by G. C. Blackman, M. D. With colored plates. Second edition.....3 50
"The best general treatise that has ever been published. The colored illustrations are the most beautiful and faithful things of the kind we have yet seen."—[Montreal Med. Chronicle.
Fuller on Rheumatism, Rheumatic Gout and Sciatica...2 00
"One of the best practical works of modern times."—[Winslow's Journal of Psychological Medicine.
Quain's Anatomical Plates. Illustrating the structure of different parts of the human body. 200 plates; 4to; 4th ed.20 00
"The cheapest work of the kind ever published in this country."—[Am. Jour. of Med. Sciences.
[Too large for mail—will be sent by express.]
Cazenave and Schedel on Diseases of the Skin. Edited by H. D. Bulkley, M. D. Second edition.....2 00
"One of the most concise, complete and practical treatises with which we are acquainted."—[Northern Lancet.
Carnochan on Congenital Dislocations of the Head of the Femur. With plates.....1 75
"By far the most complete and systematic work in the English language, and the only one which contains any directions for treatment."—[British Am. Med. and Phy. Journal.
Tilt on Diseases of Menstruation and Ovarian Inflammation.....1 25
"A lucid and satisfactory treatise upon a most interesting class of diseases."—[Nashville Jour. of Med. and Surgery.
Cock's Manual of Obstetrics.....1 25
"A plain, sensible, judicious and reliable manual"—[Kentucky Medical Recorder.
Mott's Velpeau's Operative Surgery. Edited by Dr. Blackman, Prof. of Surgery in Medical College of Ohio. 3 vols, 8vo and 4to Atlas of 22 plates.....20 00
[Too large for mail—will be sent by express.]
"A work which embraces almost every known or imagined operation of early or late times, and is indispensable as a work of reference to surgeons."—[Ill. and In. Med. and Surg. Journal.
Gregory on Eruptive Fevers. Edited by H. D. Bulkley, M. D. With colored plates.....2 75
"Abounds with valuable information in regard to a class of diseases of very frequent occurrence and of fearful mortality."—[Stethescope.
Beck's Materia Medica and Therapeutic's.....3 50
"As a text-book for students, we know of no better treatise."—[Am. Jour. of Med. Sciences.
Budd on Organic Diseases and Functional Disorders of the Stomach.....1 75
"The fullest and most satisfactory work, exclusively devoted to the stomach, that we have ever perused."—[Med. Counsellor.
Chambers on Digestion and its Derangements.....2 50
"A work of rare merit, and should be in the hands of every practitioner."—[Eclectic Med. Journal.
Foote's Practitioner's Pharmacopœia, and Universal Formulary, containing 2000 classified prescriptions.....1 50
"The newest in regard to the materials which compose it, the easiest of reference, and the most valuable compendium for daily use."—[N. H. Journal of Med.
Quain on Diseases of the Rectum, second edition, with colored plates.....2 50
"An extremely good guide for all who have to deal with these troublesome complaints."—[Brit. and For. Med. Chir. Review.
Wright on Headaches, their Causes and their Cure.....0 60
"A very excellent brochure, affording a good deal of information upon a subject which most works say but little about."—[Medical Examiner.
Beck's Essays on Infant Therapeutics. Sec. edition...00 60
"A perfect gem. We regard it one of the most useful books in our library."—[N. Y. Med. Reporter.
Cox's Companion to the Medicine Chest. From the 33d London edition.....00 75
"It is just such a volume as ought to be in the hands of the traveler by sea or by land."—[N. Y. Med. Reporter.
Goddard on Anatomy, Physiology and Pathology of the Human Teeth: with 33 plates.....4 00
"Contains valuable information for the general practitioner as well as the dentist."—[Peninsular Jour. of Medicine.
Johnson and Martin on Influence of Tropical Climates..3 00
"In no work do we remember to have seen the important subject of preserving health in tropical climates so ably, so clearly, and so philosophically treated."—[New Medical and Physical Journal.
Cooper's First Lines of the Theory and Practice of Surgery. Edited by W. Parker, M. D., Professor of Surgery, &c. 2 vols.....6 00
"The names of S. Cooper and W. Parker are alone sufficient guarantee of the value of the volumes."—[Buffalo Med. Jour.

The British and Foreign Medico-Chirurgical REVIEW;
OR,
Quarterly Journal of Practical Medicine and Surgery.

"Among the medical publications, the very best reprint among the quarterlies, is the British and Foreign Medico-Chirurgical Review."—[Hall's Journal of Health.

Price $3 a year, free of postage, if paid in advance.

BOOKS, &c.

Just Published.
THE GRAMMAR OF ENGLISH GRAMARS,
By GOULD BROWN,
Author of "The Institutes of English Grammar," &c., &c.
Second Edition—Revised and Improved.
With Portrait of the Author.

"It leaves far, very far behind it, everything which has hitherto appeared under the denomination of an English Grammar. * * * It is in the amazing extent and compass of the '*critica sylca*'—the topics, definitions, rules and illustrations; in the acute investigation which is everywhere displayed; and in the minuteness and perfect finish with which every particular is wrought up, that the distinguishing features of the work most manifestly appear. * * * We see, as the result of all that has been done by our author, a noble and most important book—ample, critical and symmetrical in a high degree—and, what is a most remarkable feature, an original work—the work of one head and one pen."—[The District School Journal of Education.

"We have carefully examined its pages, and feel bound to acknowledge it a standard work—settling numerous and vexatious disputes among teachers and scholars, and rendering plain and interesting what has heretofore appeared difficult and uninviting, and even unprofitable to those who aimed at certainty."—[The American Artisan.

V. M. Rice, late Superintendent of Public Instruction for the State of New York, in a recent letter, speaking of the author of this work, says: "I know of no man to whom this country is more indebted for a correct knowledge of our language than to him."

Also, recently Published, Revised Editions of
Brown's First Lines of English Grammar,
For Young Learners.
Brown's Institutes of Grammar,
For the Higher Classes.

Samuel U. Berrian, of Rye, School Commissioner for the Second District of Westchester county, N. Y., says:

"The definitions and rules are rigidly exact, the paradigms neatly arranged, and the formules explicit and easy of enunciation. *Method* is a marked feature of the book [First Lines]; and as to its didactics, whatever is said, is said in the fewest words possible: principle is never found clashing with principle; there is a due sequence in the parts; and all goes to make up a harmonious whole.

"Brown's Grammars are of a class *never to die*. At present of unapproachable excellence, and the highest possible authority, we doubt if they can ever be superseded, at least while our language remains what it is. The 'Institutes,' the author's intermediate, or academic Grammar, comes forth now also rejuvenated, elaborately polished, and beautiful in its exterior. We call the attention of teachers and private learners to this work, especially of those teachers who have the conduct of higher schools."

"Brown's 'First Lines,' and his 'Institutes of English Grammar,' in their original forms, were the best Grammars we ever used; with their improvements, they justly command the good will of teachers."—[Massachusetts Teacher.

Ladies' Department.

COME HOME.

[We republish the annexed from "Florence Percy," in justice to the fair author: the stanza omitted being one of the most beautiful, and adds so much to the charms of the whole.]

Return, for oh! thy wife doth pine
Thy stately form to see;
To know, to feel that thou art near,—
She pines to be with thee.
To feel thy arms entwine her form,
Her head upon thy breast,
'Twould ease her aching heart to know
She ere would be so blest.

A lonely bark upon the waves,
With none its course to guide,
Through storms and billows dashing high,
It drifts upon the tide;
'Tis thus am I, without thy hand
To lead and guide through life—
Then, oh! return, for thee I mourn;
Return unto thy wife.

I cannot chase the thoughts away,
That fill my heart with gloom,
As sadly falls my gaze upon
The now forsaken room.
Oh! then, come home, beloved, come home;
The hour, the greeting tone
Returns, and darkly falls the thought
That I am still alone.

Yes, come! there is a saddened tone
Breathed round me since ye went;
The evening winds seem wandering by,
With mournful tidings blent;
And tones of music seem more sad,
More sorrowing and deep;
And pining for thee thus, I turn
In agony and weep.

THE BIRD IS FREE.

A bird was caged; but yet no song
Had echoed from his new found home;
When, stealthily, intent on wrong,
That angel bird was bid to roam.

The hand that set that bright bird free,
By opening wide its golden door,
Must ne'er again expect to see
That bird of song—it comes no more.

That warbler bore beneath its wing,
A message full of future fate;
But in a distant land 'twill sing
A song that some will learn too late.

For angel birds make but one flight,
With messages to mortals given,
And those that will not hear aright
Lose both the message, bird and heaven.

GLAUCUS.

THE REPROACH.

When clouds, with darkening gloom,
Thy path surround,
And life seems not the boon
That erst was found—
When friendship but a myth appears,
And doubt o'ershadows thee with fears,
With vain regrets and bitter tears,
Then wilt remember me!

When youth's bright promise fades,
Like childhood's grief,
And treasured hopes are laid
With autumn's leaf—
When hollow smiles shall with deceit
Their flattering falsehoods still repeat,
And nought of truth thy vision meet
Then thou'lt remember me!

(J. L. C., Boston Cultivator.

'Tis Beautiful.

Upon the broad prairie, amid a myriad of other flowers, grew one far more beautiful than all the rest. While in its earliest glory, even when it had opened its first blossoms, and was casting its sweet fragrance upon the wind, and embalming the atmosphere around, that flower was carelessly lifted from its native home and carried to another home, where for a brief time it continued to live the admired and petted of those who came to look upon the beautiful flowers; but it soon drooped, its leaflets faded, its buds shrank and opened not; it bloomed no more. The hand that had borne it away from its original elements, not knowing its wants, or the culture necessary for its life and growth, left it to its fate, and being cared for no more, it was left without guardianship; but like all natural plants, it sprang once more into new life by its native vigor, and again put forth fresh leaves, new branches, and once more the bright buds opened, and radiant petals gave forth their accustomed fragrance and beauty, and were even more beautiful than before.

This flower was not long in its new glory until another worshipper stealthily seized it and bore to another home. It was now a proud flower, for it was in its brightest health and richest robes of beauty, and was worshipped by him who bore off his petted plant. But this beautiful flower was again destined to fade for want of care and culture: soon its bloom paled and the buds drooped; the leaves dropped off one by one, until rudeness and neglect were apparent upon this once cherished flower, and soon, unprotected, unsheltered and uncared for, it was homeless and alone; and thus it is with all the wildings of nature.

A natural element they need
To make them bloom and grow;
Transplanted without care or heed
Their growth uncertain, slow.

The hand that plants a beauteous flower,
And hopes for constant bloom,
Must guard and tend it hour by hour,
Else it finds an early tomb;
And none a beauteous flower should share,
Unless they've given it watchful care.

And so it was with that peculiar flower. Drooping and fading, it again struggled for life; blessed with its own strong native power, it may yet live and bloom with richest fragrance and more glorious beauty than ever. Once more it can be transplanted, but its life will now depend upon the hand that shall nurture and care for it, and upon that care will depend the reward for the future labor bestowed. It may give blossoms of richest fragrance to reward the cultivator, or it may yield only thorns that shall pierce the hand that nurtures and cares for it. Of this the future alone can reveal, for of all the wild flowers of the prairies and hills of any sunny clime, however bright and beautiful they may be in their native state, few only reward the hand that transplants them. Such as do reward are priceless and beautiful.

NANNETTE.

To the Rescue of Home.

We have been endeavoring for some time to prepare some remarks upon the subject of Female Help, and the importance of discussing the question connected with it in all its bearings, when the following admirably written article came to hand in the last N. E. Farmer, and is so much to the point that we copy it entire, and know it will meet with a hearty response among the most intelligent of our State.

We know there is great complaint in regard to help—the *kind* of help, the *cost* of help, and the difficulty of retaining those who having been kindly cared for and instructed in household duties, leave to obtain higher wages than families now-a-days can possibly afford to pay.

Although we always advocate a liberal pay to good laborers in every department, yet we cannot but see (for we hear and know it everywhere) that the average wages of female help are far above the average of the male laborers in our State, and we know well that this portion of the expenses of housekeeping, added to what necessarily follows when the wife is unqualified to superintend the home department, has and will deter many an industrious man, many in the higher walks of life, from entering into engagements for a home; we hear it a *thousand times a year;* it echoes over our State. This is a subject worthy the attention of every female head of the family—worthy the attention of every mother and daughter in our land, if they would see happy and prosperous homes.

The article alluded to above is here added:

Female Help.

Foreign help is now almost universally employed, in our families in New England, not only in the towns and cities, but in the country. This help constitutes a class by itself—a distinct caste. They associate together, and compose a separate society. They are ignorant, and are looked upon as an inferior class. I will refer to only one of the effects of the existence of such a distinct class in the country, viz: its tendency to degrade labor; like the presence of slaves, in slaveholding communities. When the laborer, from whatever cause, is in a degraded condition, labor itself comes to be considered a degradation. While Cincinnatus held the plow, the cultivation of the soil was an honorable employment. But when the prisoners who were taken captive by his courage and prowess, were compelled to hold the plow, the cultivation of the earth soon became too degrading an employment for the Roman soldier or citizen. Household labor is by no means as reputable as it was, when it was done by the members of our own families. The younger members of the family, especially, are growing with the idea that the washing and scouring and cooking, the harder and more unpleasant part of the labor, which is done by Irish help, is unsuitable for them, is a degradation; and they learn to despise it. Household labor is conducive to health and vigor. The health of our females has deteriorated since spinning and weaving have been given up, and the labors of the kitchen and dairy have been transferred to foreign females. The pernicious effects of this change are manifest in our families and in our children. The remedy must be found, either in a return to household labors, or in a vigorous course of exercise in the open air, such as is adopted by English females.

There is a mistaken idea connected with our system of education, which is, that education—cultivation of the mind and manners—is designed to raise us above the necessity of bodily labor. Our daughters seek education that they may be fitted to teach, or engage in intellectual pursuits, and lighter avocations. The true idea of education, that which should be kept before the mind of the young while pursuing study, is that education will fit them to labor better, more easily, more profitably, more happily. Were this idea made prominent to the young, education would not, as is now too often the case, unfit those for labor, who are so fortunate (or shall I rather say unfortunate), as to have the means of obtaining it. They would not, then, at the same time with their education, acquire the foolish notion that labor is a degradation, but would be taught that the object of education is to qualify them to apply, understandingly and successfully, their faculties of mind and their physical powers to any kind of labor that they may be called upon to engage in by their circumstances or situation.

Now our young men and women think and say that their education will all be lost, if they engage in bodily labor. An Irish man or woman can do this as well as they can; why should they get an education, if they must labor? But is this true? can an ignorant Irish man or woman labor as well as an intelligent, educated man or woman? Can they labor as skillfully, as successfully, and with as good results? One great advantage of intelligence is, that it saves labor. The intelligent laborer will accomplish his labor in less time, and with less outlay of muscular strength. He will make his brain do the work of his hands. He will labor for the future as well as for the present. The labor of, today, will not only serve the purpose of today, but to a certain extent, will be a preparation for the work of to-morrow. He will use his time, and strength, and capital, to the best advantage, and where they will be most productive of profit or gratification, and thus he will save time for the further cultivation of his mind, and for the exercise of his public spirit or his benevolence. This is no less true in the house than in those labors that are more appropriate to the stronger sex. And why should it not be so?

The intelligent and educated woman applies, not only her hands, but her mind, to her work. She works to better advantage. She does not make mistakes and failures. She does not waste her time and strength in labors that accomplish nothing. She works with a will, and with the expectation of finding time for mental improvement and social enjoyment. While her hands are employed she arranges her plans for the future, so that one duty, or one occupation, shall not conflict with another. She has a time for everything, and everything in its time; and thus she accomplishes much more in a given time, than one who works without plan or forethought. She understands the nature and properties of the material she uses, and her cultivated taste leads her to work out all her results in accordance with the laws of fitness and propriety. Hence, in these results, are not only the demands of necessity met, but the love of order and beauty is gratified, and with a much less expenditure of time and strength. She accomplishes much more necessary work, and at the same time, surrounds herself with an atmosphere of neatness and comfort, and even elegance, which is wholly unknown to the ignorant and uncultivated. Her home is rendered a place of enjoyment and happiness. She surrounds herself with objects of attraction and beauty, suitable to her circumstances. She is herself the central object of attraction and moral beauty.

But how shall this state of things be brought about? How shall the mistake in education be corrected? Says Olmsted, in his Travels in the Slave States, "A man in New Orleans told me that he now had one slave, and he got along very well; but if he married he would have to purchase three more, and he could not afford it." A young man in Massachusetts married an Irish girl. When a lady acquaintance remonstrated with him, asking him how he could do so, he replied, "If I married an American girl, I should have to get an Irish girl to take care of her, and I cannot afford to maintain two." Hundreds of young men are deterred from marrying for the same reason; and hundreds who have married have bitterly regretted their imprudence. How many wives live in a state of unhappiness, because they consider it a degradation to do their own labor; and how many families are kept poor and unhappy by indulging their foolish pride, and employing ignorant foreign help to do their work, which they might do, not only with much greater economy, but with much greater comfort and satisfaction, themselves; and which they would do, did not the mistaken notions which they imbibed in early life stand in the way. Says the Prophet, "as is the mother, so is the daughter." In relation to this subject the influence of maternal teaching and example is specially important. So long as a servile class exists in our midst, labor will be considered a degradation, whether that class consists of an ignorant European race, or of an ignorant African race. So long as this is the case, the influence and example of mothers and female teachers will be needed to counteract its effects upon our daughters.

[For the California Farmer.]

An Appeal to Wives and Mothers.

Would you have your husbands spend their leisure hours at their own firesides, instead of seeking other society than yours? and spending night after night in drinking, and gambling with beastly companions? Then make your homes attractive, and use economy; be saving of your time and money; dress neat and becoming, but ever within your means. Adorn not yourselves with gaudy ornaments; but remember the teaching, and counsel, of a "Dear Old Saint," now gone to rest; and seek above everything to be ornamented with "*A meek and quiet spirit.* And seek to please none so much as your own husband. Let your hair be combed just as nice and your house kept just as free from dust, when he alone is expected home to dinner, as you used to ere you bore a matron's name. You would surely have blushed then to receive him with a dress full of rents, and covered with dust and grease, unless you was in some very dirty business, and then of course, you would dress appropriately; but you could put your dress on *neat* then.

And now about your children: Dress them neat, and tidy; their hair combed smooth, their shoes tied up, and their cheeks clean and rosy; their little paddies clean, and teach them to run out and meet Papa, with a hearty welcome, and give him a kiss from their clean lips. What is better calculated to keep a man from vice, and error, than his own bright-eyed, roguish, fun-loving, careless little prattlers. Teach them to be good and to love one another. Little children are the best ministers in the land, if rightly trained; and who can train them, and cultivate the *good*, and root out the *evil*, like the *mother?* And if you would have your husband look up to you, and learn of you, you must show him, that you love and appreciate *his society*, and *he* is *all the world to you.* If he has got any heart, he cannot see you toiling, day after day, and denying yourself all society, but *his*, and your children's, to smooth the way of life for him, without at least giving you *kind words*, and spending as much of his leisure time in your society as he possibly can.

ROSA.

TALLMADGE, Mich., April, 1857.

Female Education.—A writer in the new number of the North British Review, observes:

"Instead of educating every girl as though she were born to be an independent, self-supporting member of society, we educate her to become a mere dependent, a hanger-on, or, as the law delicately phases it, a chattel. In some respects, indeed, we err more barbarously than those nations among whom a plurality of wives is permitted, and who regard women purely as so much live stock; for among such people women are, at all events, provided with shelter, with food, and cloth ing—they are "cared" for as cattle are. There is a completeness in such a system.

"But among ourselves we treat women as cattle, without providing for them as cattle. We take the worst part of barbarism and the worst part of civilization, and work them into a heterogenous whole. We bring up our women to be dependent, and then leave them without any one to depend on. There is no one, there is nothing for them to lean upon, and they fall to the ground. Now, what every woman, no less than every man, should have to depend upon, is an ability, after some fashion or other, to turn labor into money. She may or may not be compelled to exercise it, but every one ought to possess it. If she belong to the richer classes, she may have to exercise it; if to the poorer, she assuredly will."

Heavenly Origin of Chit-Chat.—Naturally, women talk more than men. The learned Buxtorf informs us, in his Hebrew Lexicon, that the primeval name, Eve, is derived from a root signifying Talk; and it was perhaps from a dim idea of this kind that the Rabbins owed their tradition that twelve baskets of chit-chat—it could not be gossip, for there were no neighbors to gossip about—were rained down into Paradise for Adam and Eve to amuse themselves with: of which twelve Adam picked up three, and Eve the other nine. [Elizabeth Strutt.

Corner of Sansome and Bush streets, San Francisco, Cal.
FAMILIES accommodated with suites of rooms—boarders by the day, week or month, with or without rooms, at low prices. The "Rassette Coach" will call at all the steamers and convey passengers (baggage free) for One Dollar. JOSEPH RASSETTE,
v6-1 Proprietor.

Hayward's Hotel,
Five Miles from San Leandro, near the Castro Ranch.
THE Proprietor of the above Hotel takes pleasure in calling the attention of his patrons to his house at the present time. Having taken some pains to newly finish and furnish his house and prepare it for the traveling public, he feels confident he can offer a pleasant and comfortable "home" for the traveler, or for any one that wishes to spend the season in one of the finest valleys of the State.
The location is one of the most healthy and delightful spots in Alameda county. Situated upon a commanding eminence, it presents a magnificent view of one of the most beautiful and highly cultivated valleys of California, and opens the prospect to the bay and harbor of San Francisco, and the country around for many leagues.
The Proprietor has spared no pains or expense to fit and furnish his rooms in a style having reference to neatness and cleanliness and comfort. These he feels confident will be approved; and every effort will be made to have the table and and every other department subserve the pleasure of his patrons.
A good Stable is attached to the house. Horses in saddle or harness can be furnished for the pleasantest road scenes in the country—the Springs, the Mission Gardens, the Fishing Grounds, and other places, furnishing abundant sources of amusement for the benefit of invalids or persons desiring recreation and pleasure.
☞ The patronage of the public is solicited. v7-18 3m

Estudillo House,
SAN LEANDRO, Alameda County.
THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.
To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.
San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.
The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.
v7-13 A. R. BIGGS & CO.

Antelope Restaurant,
Nos. 74 and 76 J street, Sacramento.
THE Proprietors of the above named Restaurant offer it to their friends and patrons as a *first class restaurant*, perfect in all its appointments, with Lodgings attached.
The Proprietors hope, by strict attention to business, to give satisfaction to all who may favor them with their patronage.
J. D. Treat. [7-8 3m] Charles Brooks.

OY'S FINE OY'S.
THE luxury of a good "Oyster"—a genuine "Cove Oyster;" one of your Baltimore or New Yorker's (the very thought of which makes one's mouth water)—can always be found by those who can appreciate them, either in the Shell, Broiled, Fried or Stewed, and in true epicurean style, at "DAN'S OYSTER SALOON;" and with this appetizer, before or after, every other dish of dainties, such as those who appreciate good things can always find at DAN'S OYSTER SALOON,
Montgomery street, bet. Commercial and Clay,
v7-14 San Francisco.

☞ A GIFT BOOK FOR ALL SEASONS. ☜
FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.
LUCAS BROTHERS, No. 170 Market street, Baltimore, Md., call the attention of the public to their new splendidly illustrated edition of Mrs. Wirt's Flora's Dictionary. It is a medium quarto, containing two hundred and thirty pages, embellished with a border, and interspersed with upwards of
Five Hundred Wood Engravings!
It is issued in the following styles of binding and illustrations:
Muslin, super extra, gilt edges and full gilt sides, with Eight Groups of Flowers colored from nature.
Morocco, extra, gilt edges and full gilt sides, with Fourteen Groups of Flowers colored from nature.
Turkey Morocco, super extra, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.
Turkey Morocco, Antique, gilt edges, with Fifty-Eight Groups colored from nature, illustrating all the flowers named in the book.

SEEDS, &c.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.
THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid.* Description and directions for culture furnished with each package.
NEW CHINESE SUGAR CANE (Sorghum Sucar).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.
Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.
Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 1i 15 John street, New York City.

SEEDS.
HOVEY & CO.,
DEALERS IN SEEDS,
No. 7 Merchant's Row, Boston, Mass,
ARE now receiving their new and fresh stock, embracing all the best and most desirable varieties of Agricultural, Garden and Flower Seeds, grown expressly for them by the most experienced cultivators. Purchasers who wish to obtain the most reliable Seeds are requested to forward their orders early.
Seeds packed securely for California or any other part of the country.
Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.
Catalogues sent gratis on application.
☞ Remittances must accompany orders. v6-19

New Flower Seeds.
A superior lot of very choice Flower Seeds—many rare kinds—just received from a Boston house. Persons wishing any of them can procure them by calling at our Office, 130 Washington street, San Francisco; or address by letter marked "Seed Order," and it will be promptly attended to. [7-11] WARREN & CO.

Sugar Beet Seed.
WE have received a lot of very superior French Sugar Beet Seed. It is of extra quality, new and fresh, and imported expressly for trials of beet raising for sugar making.
Persons who desire a superior article can order by express, and the seed will be carefully forwarded. Such orders should be addressed to our office at San Francisco, superscribed "Seed Order." [7-11] WARREN & CO.

Garden, Ornamental and Forest Tree Seed.
A VERY choice assortment, selected by Messrs Thorburn & Co., of New York, with great care, expressly for BRYANT & CO.,
v7-6 2m 68 Battery street.

Hemp Seed.
SUPERIOR Hemp Seed, just received. No country in the world can surpass California in the production of this article.
For sale at our Office 130 Washington street, San Francisco.
v7-11 WARREN & CO.

Seed of the Great Tree.
A FEW packets of the Seed of this famous Tree are for sale at the State Society's Rooms, on Fourth street, Office of the California Farmer. v5-13

Smith's Pomological Gardens
AND
NURSERY.
On the American River, 2½ miles from Sacramento.
THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of
Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants
to be found in any one establishment on the Pacific Coast.
Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.
FRUIT TREES—fine, vigorous, and in every variety of the following:
Apple, Peach, Peat
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.
ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.
Among the fine Trees are the following varieties:
Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.
Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.
We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.
ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.
Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.
GARDEN SEEDS.—1,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.
☞ Catalogues furnished to applicants.
☞ Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.
A. P. SMITH.

NOTICE.
We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.
Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.
☞ J. F. SWIFT, No. 1 Washington Market, is Special Agent in San Francisco for Smith's Pomological Gardens.
v6-19 3m A. P. S.

[PREMIUM MANUFACTORY.]
Hudson's Golden California Mustard.
THE proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.
The proprietor also manufactures a very superior article of Sallad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.
For any further information regarding this Mustard, we refer to the principal business houses in this city.
Purchases at wholesale or retail are specially invited to call at the office,
22 Front street, corner of Pine,
H. C. HUDSON.
P. S.—The highest price always paid for pure A No 1 Mustard Seed. v7-8 3m

Spermatorrhea can be Cured!
THE GREAT RUSSIAN REMEDY!
THIS unparalleled specific for the above fearful complaint, recommended by the Medical Societies of Berlin, Paris and Vienna, and by Dr Andrew Ure, of London, has recently been imported by the agent of Johannesburgh & Co., the manufacturers, and is now for sale in San Francisco. A cure is guaranteed in from three to fifteen days, even when paralysis has taken place.
Address Box 14, San Francisco Post Office, inclosing $10, when sufficient will be sent for a perfect cure; and the harrowed mind of the almost lunatic victim of passion put to rest. We have also half packages at $5—they will be put up carefully and sent per express, free from detection.
JOHANNESBURGH & CO.,
v7-14 Vallejo street, bet. Stockton and Dupont.

Cordage Manufactory.
WE now have our ROPE WALK in operation, and are manufacturing CORDAGE of the best quality from
Pure Hemp, direct from Manila,
and have constantly on hand
MANILA ROPE OF ALL SIZES;
Also,
BALE ROPE and WHALE LINE.
v7-8 3m TUBBS & CO., 130 Front street

Ho! There, Everybody! Face the Music and Read!

If you have business of any kind to transact, is it not important that you should endeavor to get as near as possible to where business of all kinds is known to center?

Do you wish to patronize a house conducted on strictly temperance principles?

Do you want to stop at an establishment favorably known throughout California, Oregon, and all other places, for its moderate charges, good tables and best of beds, together with order, comfort, convenience, and superior accommodations?

If you desire all these, we advise you to go to

WOODWARD'S

87, 89 and 91 Leidesdorff street---119 and 121 Sacramento street.

This establishment is centrally located in the principal business part of the city, and in the immediate vicinity of the Steamship Company's Office, the Express Companies Offices, and the United States Branch Mint.

BOARD, per Week, $6. BOARD, per Day, $1. MEALS, 50 cts. LODGINGS, 50 to 75 cts. per Night.

☞ Single Rooms, furnished complete, 75 cents per Night.

☞ Rooms or Lodgings can be had by the Night or Week, with or without board, to suit the convenience of all.

The Beds are fitted up in the very best style, with patent French springs, and the best of curled hair mattresses, clean bedding, &c.

☞ BATHS FREE! ☜

By unremitting attention and untiring efforts to furnish the greatest amount of comfort and convenience at extremely low prices, the proprietor hopes to merit a continuance of the increasing patronage that the What Cheer House at present enjoys.

For the accommodation of miners and others having money or valuables, there are two large safes in the office. There is an extensive Library and Reading Room, well supplied with papers, periodicals, &c.

THE HOUSE IS OPEN ALL NIGHT.

☞ Travelers will please to remember that there are no "Runners" connected with this establishment. The What Cheer House is conducted on strictly temperance principles.

MEDICINES, &c.

J. L. POLHEMUS
DRUGGIST

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

v7-14 R. H. VANCE.

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

LYNN COUNTY, Oregon Ter., March 11, 1855.

MESSRS. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 3d of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.

Yours, respectfully,
CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

NEW YORK, July 15, 1856.

MESSRS. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.

Yours, &c.,
G. B. WILLIAMS, 262 BROADWAY.

PRICE, 25 CENTS PER JAR.

Prepared and sold by A. B. & D. SANDS, Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v7-16 3m

OFFICE—124 Montgomery street, corner Sacramento street. v7-17

Splendid Merino Rams and Ewes.

ANY person wishing a few very superior Merino Rams and Ewes can be supplied if they call for them immediately. WARREN & CO.,
v7-1c 130 Washington street, San Francisco

California not so Bad a Place, after all.

Some newspapers have a penchant for arraying all kinds of crime before the public, and constantly holding up California as the worst place on the earth for crime. We are ready to admit there is too much of it, yet we wish those journals that are so greedy for the *Criminal Calendar*, just to look upon the following table of crime for the good city of Philadelphia—the city of Penn, and of Brotherly Love—and then they will see that San Francisco, or California, is "not so bad a place after all:"

"*Philadelphia* is a lively town, considering its high claims as to abundant brotherly love. During the last year there were 17 commitments for arson, 54 for burglary, 46 for murder, 13 for rape, 55 for robbery, 3 for manslaughter, 20 for highway robbery,—for assault and battery, two thousand one hundred and eighteen!!—stealing, 1356!!!"

The Crops at the East.—The papers received by the last mail from the trans-mountain States, give rather unfavorable reports on the prospects of the present year's crops. Late frosts and cold weather had been quite general, doing serious injury, particularly to the corn, cotton, and sugar-cane, of the Southern States. And although these accounts come to us, yet we notice that considerable Flour is being shipped from the East to California; this being the result of the foolish reports of short crops here. We do not pity the importers, however. We hope they will learn a lesson they will not soon forget. *California has Flour enough* and to spare, and we can ship Flour to them better than they can spare it to us.

Magnolia Hotel, Stockton.—This excellent hotel, under the care of its active and enterprising proprietor, Capt. Morris, is now in complete order to receive visitors. The house has been put in complete repair, thoroughly renovated and furnished very neatly. Capt. Morris is now making preparation to receive the visitors during the Fair, and will be able to accommodate three hundred persons. Having been shown over the house, we can say it is neat and cleanly, and worthy a generous support.

Artesian Well at Stockton.—This well has now reached the depth of 765 feet, and the auger passes through clear blue sand. A fine swell of water flows over the tube, similar to many of the common wells of San José; but the intention is to continue digging until an abundant flow is found. We trust such a stream may be found previous to the time of the Fair, so that fountains may grace the show grounds and the hall.

Scarcity of Cotton Seed.—The Savannah Republican says: "We understand that a commission house in this city received an order lately from Columbus, for "ten thousand bushels of cotton seed." The order was sent in behalf of planters in that section of the State and Alabama, whose first plantings have been destroyed by the frost. In view of the fact that young cotton is liable to so many disasters, such improvidence on the part of planters may well be wondered at. No wise man, it seems to us, would ever be without double supply of seed."

An order in Council has been issued, prohibiting the importation into England of cattle, or of horses, hoofs, hides, or skins, from those territories of Russia, Prussia, or Mecklenburg (Schwerin) which lie on the Gulf of Finland, or between the gulf and the city of Lubec. This precaution has been taken to prevent the introduction into England of the infectious disease which is destroying the cattle of the Baltic provinces.

The Maple Sugar Crop.—The maple sugar season, has thus far been a successful one throughout the New England States. In Vermont it has proved the best in ten years. In Northern New Hampshire, we learn by the Manchester Mirror, the business has been unusually lucrative, although the late storms have probably closed up the season.

Shipment of Treasure, this day, by the steamer John L. Stephens, $2,260,195; by steamer of 20th May, $2,284,864—total for the two last shipments, $4,545,059.

Old Men in Old Times—*Modern Degeneracy.*—Modern luxury is not favorable to long life. In the patriarchal era, if translators of the scriptures are correct in their interpretations of the Mosaic measurement of time, an ancient Hebrew was quite a youth at the age of a century or so, and could scarcely be considered settled for life before he had reached his second centennial epoch. Now, however, a man is venerable at fifty, and although Old Parr saw his 159th birthday, and the census occasionally brings a centenarian to light, seventy is usually the extreme limit of human existence. The fact is, we moderns eat too much, drink too much, loaf too much, and work too little. We spoil our stomachs with over indulgence, and the result is impure blood, vitiated secretions, a disordered system, and premature decay. The root of half the fatal diseases of the race is dyspepsia, a complaint unknown, it is presumed, in the days of Moses and the prophets, when turtle soup, terrapin stew, rich *pate's* and champagne were uninvented. As these, and hundreds of other indigestible's, however, form an indispensable portion of the *carte* of the nineteenth century, and human nature or rather artificial appetite *will* invoke dyspepsia with all its kindred horrors, one of the great objects of medical science should be to provide a cure for them. This we really think has been accomplished by Holloway. His pills seem almost to realize the fable of the *Elixir Vitæ*. There can be no manner of doubt (unless we choose to reject a mass of testimony which would be deemed conclusive by any court and jury in Christendom), that they are the most potent and unfailing remedy the world has ever seen for indigestion, and all disorders of the stomach, the liver and the bowels. We do not advise our readers to tempt an attack of these maladies by neglecting the condition of health; but if the mischief is done, we most earnestly recommend this famous laxative and stomachic—for strange to say, the Pills combine the two qualities—as the speediest, the safest, and the most infallible means of cure. In so doing we simply act upon our own convictions, founded on personal observation, as well as on volumes upon volumes of unimpeachable vouchers.—[Boston Traveler.

Black Teeth.—The cause of this disease in hogs, is close confinement from the ground. Its symptoms are these: the hog loses appetite, becomes dizzy, and is weak in its hind legs; the teeth are black. Prevention and cure may be effected by giving the animal a clean dry pen, well strewed with wood ashes, and plenty of turf for him to root over; feed him well, too. In bad cases, removal of the worst teeth is thought good, but this may be avoided by due care. Many farmers and agricultural writers ridicule the idea that swine are liable at all to such a disease. They deny that a well authenticated case has ever been proved.

A Calculation to Look at.—Suppose a man drinks four glasses of liquor a day, at five cents a glass; in a week he spends $1 40, and in a year, $72 80. This will buy the following articles: 4 barrels of flour, say $24; 4 pairs of boots, say $15; 40 pounds of butter, $10; 200 pounds of beef, $8; a new hat, $4; a new satin vest, $4; a bonnet for wife, $5; sugar plums for children, $1 80: Total, seventy-two dollars and eighty cents.

Holloway's Pills are highly recommended for the cure of Scurvy, and other diseases usual to sea-faring men. No mariner should go to sea unprovided with this medicine. It regulates the digestive organs and gives health and vigor to the human frame.

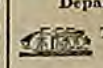
Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

It is folly to suffer from a protracted cough when relief may be so easily obtained. Wistar's Balsam of Wild Cherry is undoubtedly the most reliable of all preparations offered for the cure of throat or lung complaints. None genuine unless signed I. Butts on the wrapper.

BOOKS FOR GARDENERS.

Just received, at the office of the Farmer, a few valuable Agricultural and Horticultural Books, worthy especial attention:—BRIDGEMAN'S GARDENER'S ASSISTANT, one of the best books known, embracing every subject worthy of notice; BARRY'S FRUIT GARDEN, a standard work, and should be in the hands of every orchardist and gardener; RURAL HOMES, a standard work every library should have a copy of. These, with other Agricultural Books, noticed in the advertising columns, will supply a want which many experience in cultivating.

Pacific Mail Steamship Company's Line
TO PANAMA,
CONNECTING
VIA PANAMA RAILROAD
WITH THE STEAMERS OF THE
UNITED STATES MAIL STEAMSHIP COMPANY.
AT ASPINWALL.
For New York and New Orleans Direct.
Departure from Vallejo street Wharf.



THE MAGNIFICENT STEAMSHIP
GOLDEN AGE,

Are furnished, including the transit of the Isthmus.

Passengers are notified that the tickets for the steamers of the U. S. Mail Steamship Company must be presented to their Agent at Aspinwall for registry and exchange, as they will not otherwise be available.

☞ Treasure for shipment will be received on board the steamer until 12 o'clock midnight, Friday, June 19th.

No Merchandise freight will be received on board after 3 P.M., June 19th, and a written order must be procured at the Company's Office for its shipment.

For freight or passage, apply to
FORBES & BABCOCK, Agents,
Corner of Sacramento and Leidesdorff streets.

☞ A Choice of Berths on the Atlantic Steamers is secured by the early purchase of Tickets in San Francisco. v7-1

PHALON'S
CHEMICAL HAIR INVIGORATOR.
The most complete article of the kind ever before offered to the public. It has stood the test of twenty years in this county, and not one of the many hundreds of imitations have been able to compete with it for preserving, dressing, and beautifying the hair, and keeping the head clear from dandruff, &c. It is inestimable; in short it is everything the hair requires. Price, 50 cents and $1.

PHALON'S
PAPHIAN LOTION,
OR FLORAL BEAUTIFIER.
A great cosmetic for beautifying the skin and complexion, and for curing chapped hands, face, lips, tan, sunburn, freckles, pimples, scalds, burns, &c. A sure and safe cure for the piles—one washing will give instant relief. After shaving, it is very soothing to the skin. It keeps the hands soft and white, and for inflammations of the skin it will be found to be a great remedy. Price, One Dollar per bottle. Made and sold by E. PHALON.

PHALON'S
MAGIC HAIR DYE.
One of the very best natural dyes in the world. Its long use has proved it to be beyond comparison; and being a vegetable production, no injury can possibly be done to the skin. It is easily applied, and you can obtain a black or a brown which will defy the best judges to tell it from nature itself. Price $1 and $1 50 per box. Made and sold by E. PHALON, at 197 Broadway, corner of Dey street, and 517 Broadway, St. Nicholas Hotel, New York, and all Druggists and Fancy Stores throughout the United States.

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.
It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.
It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.
The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.
Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!
It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by Cornelius J. Flatt, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17th of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.
A daily account of recitations and deportment will be kept and sent monthly to parents.
The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS: PER MONTH

Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	6 00
Tuition in the Ancient or Modern Languages	5 00
Board (per week)	6 00
Washing (per session)	25 00

Private arrangements will be made for Instrumental Music when required.
No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.
For further information or references, address the Principal.

*** Subscribers can always form Clubs and transmit by either of the Expresses, or with perfect safety by Mail.

THE LAW OF NEWSPAPERS.
1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.
☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.
Postage of the Farmer.—The Postage of the Farmer to any part of the State is only 6½ cents per quarter, or 26 cents per year. This is the lawful postage established by Congress and when more is exacted it is a violation of law

State Agricultural Fair!

CATTLE SHOW AND NDUSTR AL EXHIBITION,

AT STOCKTON,

On SEPTEMBER 29, 30, and OCTOBER 1 and 2, 1857.

THE ANNUAL FAIR, for the Exhibition of the Products of the Soil, and of Industry, will be held as above, in the large Court House Building, and Grounds adjacent, which will be inclosed and covered for that purpose.

THE CATTLE SHOW will be held at the CENTRAL RACE COURSE, one mile northeast of the city. The avenues leading from the Court House Building to the Cattle Show Ground, will be kept well sprinkled and free from dust.

PREMIUMS OFFERED FOR 1857.

AMOUNTING TO OVER $6,000.

Farms, Orchards, Vineyards and Field Crops.

Competitors for Premiums in this Department are to give immediate notice of their intention to the President or Corresponding Secretary, that the Committee may visit and examine at the most favorable time. No such notice will be expected to claim the attention of the Committee, unless received before the first day of August.

For the best Essay on Quartz Mining.....50
Essay on the best mode of destroying Squirrels and Gophers, accompanied by actual experiments.....50
[All the above Essays must be accompanied by a list of Experiments to prove the Theory advanced.]

Discretionary Premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of Premiums.

Each Committee is authorized to recommend Special Premiums upon objects which properly belong to the class assigned to it.

The Judges appointed will in every instance "withhold Premiums on animals or articles, that, in their opinion, are not worthy, though there be no competition;" and no stock of inferior quality will be admitted within the ground.

The Managers of the Society will be present during the Fair, to give directions to all who may wish to enter animals or any articles for Premiums or exhibition, and forage will be furnished gratis for all animals entered for Premiums.

The various Premiums awarded will be promptly paid upon the reception of the State Premium Fund of $5,000, which is wholly devoted to this purpose.

SPECIAL PREMIUMS.

For Ladies in Saddle.

N. B.—No competitor will be allowed to enter this list without a card from a Committee, to secure ladies from improper association.

Special Purse Premiums.

☞ An opportunity will be given for the trial of the Strength of Teams, and the Speed of Horses, running against time; the Premiums being provided in each department by an extra Entrance Fee of Five Dollars, three-fourths of which shall be allotted to the best animal or team in its class, the other fourth to be awarded as a second Premium; the winner of the first prize in every case to be entitled to a Diploma of the Society, as an additional Premium.

Under this head entries may be made—

For Pacing Horses, For Trotting Horses,
For Running Horses, For Draft Teams of Horses,
For Draft Teams of Mules, For Draft Teams of Oxen.

☞ The Society offers a **Purse of $250**, free to all California-bred Horses—three years old last Spring—one mile heats—best two in three—ride as they please—to be run on Friday, October 2d, at 2 o'clock, P. M.

EXECUTIVE COMMITTEE:

WM. GARRARD, President.
E. S. HOLDEN, First Vice-President.
J. C. COBB, Corresponding Secretary.
GEO. H. SANDERSON, Recording Secretary.
P. EDWARD CONNER, Treasurer.

SALE OF A FLOURING MILL.—The large flouring mill, erected at a cost of $80,000, and formerly owned by Messrs. Paige & Webster, of Stockton, was recently purchased by Messrs. Hewlett & Collins, of that city. This mill, the Argus says, is capable of turning out two hundred and fifty barrels of flour per day, of the finest quality.

Voices from the Old States.

THE great State of Michigan speaks! and we cry, hear! hear! We need no longer wonder that we do not have a rapid increase of population from the old States, when such impressions prevail as these of which the annexed letter speaks.

Why will our citizens sit down with folded hands? Why will our merchants remain idle and see their business gradually going to decay, and they fast becoming bankrupt, and not lift a hand to avert the blow that will surely fall upon our State unless the right action is taken? We ask all to read the following letter, and then ask what shall be done! We say, *flood the States with correct information upon the resources and true condition of California!* Give to the thousands and hundreds of thousands of people who are now moving to new territories the real state of things here; show them our unbounded resources, and the tide of immigration will turn this way.

Not a paper comes to us from the East that is not filled with accounts of families—hundreds of families—that are moving to Kansas, and to the great States west of New England. "Their number is legion," and all these are prevented from coming to California by reason of the alarming facts that are heralded by our journals, which are principally filled with accounts of crime and misery; of public and private plunder, sufficient to deter every lover of good order from seeking a home in such a country.

We ask, in justice to our State, in justice to the wise, the good, the truly industrious portion of our State, shall these *dark pictures* only go abroad? We have been humbly striving to present a truer, a better, a brighter picture before the industrious of the great States of our glorious Union. We know of thousands of families who are looking to California for a home, but have thus far been prevented from coming hither by the *dark side*, which, as yet, has been the only view which has reached them.

We now ask our citizens to calmly review the picture that the last steamer carried to the East, and then ask themselves if they could be induced to go and settle in any country where such a state of things existed? The last steamer takes the news that the Treasurer of the State, whose defalcations and abuse of his trust have cast a foul blot upon the honor and reputation of the whole State, has thus far eluded that punishment which should ever await such a breach of trust. All the associations connected with that office, the past year, reflect but a sad picture of the public heart. Public trials of various other matters are heralded in such a light as to emblazon slight crimes into enormities; and just now widely distorted stories of defalcations of other public functionaries fly from mouth to mouth, and the journals of the day herald them as the *news*. Columns of highly colored police records, and the sad, sad stains upon the social fabric that our journals greedily paint to feed a depraved appetite—these all go forth to our Eastern friends, and they are thus filled with horror and alarm, and instead of coming to our golden land, to make a home in our beautiful valleys, they turn away to Kansas, or to the already too thickly populated States, and waste the golden opportunity of coming hither, where bounteous Nature has opened a field for the laborers of tens of thousands of homes that shall yet bless our land.

Do our readers ask us what they shall do? We answer, *send the very document* which the writer of the following letter received from our hands; send the *Report of the State Agricultural Society*, containing the accounts of the late Annual Fair. That document will show the bright side of California; it will show her rich productions, her fruits, her flowers, her grains, her vegetables, and the skill of her working men in all the various departments of industry. This will convince men that we have a country where plenty abounds.

We ask, too, of those who feel a true interest in the *future* of California to peruse *our journal*, and to ask themselves if they can better serve their friends East than by sending them a copy of the FARMER regularly by mail. We believe we can say without vanity that we know this will enlighten them upon the condition of California, showing them the means we have in our State to sustain a population, at least as clearly as any other journal on the Pacific. We know we labor to that effect, and if our merchants, our mechanics, and our citizens generally would unite with us in these efforts, the dark and threatening cloud that now hangs over our State would soon disappear. We ask an especial reading to the following letter. It will speak in a stronger language than we can.

We must ask our readers to notice this fact. Our correspondent asks us not if the Gold continues—not a word of that. Fruit, Flowers and Grain are more precious to those who seek for homes.

TALMADGE, Ottowa county, Michigan, April 16, 1857.

EDITORS FARMER: Report and sample CALIFORNIA FARMER received and *well* perused. Many thanks to you for them. I am receiving the FARMER regularly *via* Boston, Mass. I like it well, and it makes a fine addition to my newspapers.

I have been trying to get reliable information concerning the agricultural resources of California, and believe I have found it in the Report of your last Annual Fair. If I had known of your climate and soil three years ago I would have been a resident there, tilling the soil; but I was wrongly informed (as the majority of our Northerners are). I heard little but *gold, gold*, and *crime*; that the country was full of ruffians and cut-throats. What inducements were these for a permanent residence there? What would a home be with such surroundings? But *my* views are changed with what I have learned within a year. I am bound to find a *home* there, among my brother farmers. Such a *climate* as yours! such *fruits, vegetables* and *grain!* My fever don't abate. I will go as soon as I can dispose of land and property here; and I will bring all I can with me, and seek a *home*—such a home as myself and family will be proud of, if life and health is spared us.

Perhaps you would like to know something of our winter. We had a very hard one. Snow nearly two feet, and mercury down to, or below zero nearly half the time. Have had my cattle in stable since November 22d, and have had but little weather warm enough to make them comfortable out since. Had some springlike weather in February; the snow disappeared, and we anticipated an early Spring, but we are disappointed. Vegetation has started but very little, and many cattle are nearly famished. It has snowed, more or less, nearly every day for two weeks. I think that about eighteen inches of snow has fallen since April 5th, but the temperature has been so high that most of it is gone. The thermometer was 30° above zero to-day, at 11 o'clock, A. M., and the snow is from three to four inches deep, with frequent snow-squalls. But it is an "evil wind that blows no good:" the farmers are reaping a sweet harvest of maple sugar. More sugar will be made this spring than at any time within three years.

If you have any descriptive and price catalogues of fruit and ornamental trees please mail one to me, as an orchard of fruit trees will be about the first thing I shall plant on a farm. The cultivation of fruit I wish very much to engage in, and that too in a soil and climate that will grow it to perfection, with the labor of my hands, which I am willing to give. I love to labor, surrounded with the best gifts of Nature's fruits and flowers. Their flavor and fragrance! where are those who do not appreciate them?

Yours respectfully,
O. N. CADWELL.

N. B. The prospect of fruit this year is not very promising, particularly peaches and grapes. Peach trees are nearly all dead, on account of the cold weather. Grapes were killed twice last year. The frost generally cuts them down just before they blossom. Perhaps apples will be plenty, because they are more hardy. There was but very little fruit last year of any kind, and consequently it was very high. O. N. C.

PULU MATTRESSES.—This singular material, the Pulu, is now extensively used in the making of mattresses, perhaps more so than curled hair or any other material. It is but a brief time since it was first introduced, and now we note its arrival here in quantities like fifty or an hundred thousand pounds in a lot. Some peculiar properties are attributed to it, as having the power to ward off all noxious insects. Sailors, and natives in China and other countries where it is found gather it and use it because it secures them from the danger of venomous insects and reptiles. Immense quantities are now used here. We note the opening, for sale, of 75,000 pounds by one house in this city, the Messrs. Schreiber of the Rochester Furniture Warehouse, on Jackson street, opposite the International. We called to see it, and examined the material and the mattresses made. We know the value of this kind of mattress, having used them for more than a year. Messrs. Schreiber have now the entire control of the article in this market, and they are supplying the dealers and makers of mattresses here.

As this is a matter of some moment to the families on the Pacific we mention these facts, and also say that the Messrs. Schreiber won the premium for this branch of manufactures, at the State Fair of 1855, at Sacramento, and presume they will make a handsome show at the coming Mechanics' Fair in this city, in September, and also at the Fair in Stockton.

DONAHUE'S FOUNDERY.—Here we have another great hive of human toil and the development of human genius; and when we peep into such places we wonder our unwise importers of implements and machinery do not see how much better it would be for our State, if all the machinery and every implement now imported was made here, and the heavy cost of them saved to the State. It can be done—it ought to be done—it must be done.

Strawberries.

The Ky. Farm Journal says: we promised to tell why we prefer to grow the Strawberry in rows from eighteen inches to two feet apart, instead of cultivating it in the common method of broad patches, or in crowded beds three or four feet wide.

1. White plaintain, white clover, and sorrel, are three great pests of Strawberry grounds in many parts of the Ohio Valley. It is very difficult to get the upper hand of these vagrants, and quite impossible to maintain it, where the entire surface of the ground, except the parts which they usurp, is covered by Strawberry plants. The sorrel can be pulled up without materially disturbing the Strawberries, but without great care is apt to break off near the root, and immediately commences to grow again. A strong Strawberry fork is required to get up the plaintain, which sticks to the ground as tight as burr to a sheep's fleece, and where one of the pests is taken out a dozen more are just ready to spring up and occupy its place. As for the white clover, nothing less than a fork-spade is sufficient to force it out by the roots, and every piece that is left an inch long soon forms a new plant.

2. By setting the Strawberries in rows a foot and a half or two feet apart, and ten or twelve inches apart in the rows, room is left to hoe, spade, and even plow them. By these processes they can be kept clear of weeds of all kinds with very little trouble.

3. When the plants are allowed to establish themselves by running all over the ground, they can receive no sort of cultivation, and in the course of two or three years require renewal, or fall off in the quantity and quality of their fruit. But if cultivated according to the method we propose, the ground can be worked at any time except when the plants are setting or ripening their fruit, and the berries will come of good quality and in large quantity for four five, or even six years.

4. When hermaphrodite or perfect varieties are not planted, the pistilate (female) varieties must be supplied with a certain number of stimulate (male) plants. If suffered to run indiscriminately together, it is well known that these latter will in the course of two or three years completely overrun the grounds and crowd out the fruit-bearing plants. But set out as we suggest, every eighth, tenth, or twelfth row can be given to the staminate plants, and to that row they can without much trouble be kept confined.

5. In very dry seasons the Strawberry is much benefitted by a good mulching, say of spent tanbark, half-rotten leaves, or sawdust. This it is quite impossible to apply where the whole ground is covered; but when the plants are grown in rows, it can be applied thoroughly without the least difficulty.

6. When well cultivated in rows, the plants are more vigorous and the berries larger and better than when covering the entire plat. The fruit is also more readily seen and more easily gathered in the fomer case than in the latter.

7. When a dry spell occurs at the period of blossoming and setting the fruit, a liberal supply of water must be given to the plants by hand, or but little fruit need be expected, and that little small and inferior. If the cultivation is by rows, this water can be much more easily supplied than if it is otherwise.

These reasons are conclusive with us, and we think ought to be with all who grow the Strawberry in their gardens.

We shall have something to say about *varieties* in our next issue.

Tomato Culture.

The cultivation of this vegetable is comparatively recent in this country. Thirty years ago it was hardly known, except in the gardens of the curious, and among those seafaring people whose business had led them to the West Indies, and to South American ports. It has been much longer established in France and Spain, and was introduced into those countries from their South American possessions, where it originated. Thousands of acres are cultivated to supply the demands of our large cities, and so abundant is the yield of the vines, that in their season they are among the cheapest of vegetables. They are also made into catsup, pickles, sliced and dried for winter use, and lately it has become common to seal them up in cans, in which they preserve their flavor admirably, and can be had fresh and good the year round.

There are numerous varieties, of which the large smooth red is the most popular for market, and the Mammoth much the best flavor for family use. This we have raised several years, and have frequently had them two pounds in weight. The plant will perpetuate itself in the garden, unless pains are taken to destroy it. But this is a careless method of growing them, and they deteriorate in size and quality, unless the seeds of the best fruit are saved and planted.

They are commonly forced by planting single seeds in pots in February, and putting them out the last of May, already in blossom. The pot is then well filled with roots, and as none are broken in turning them out, they push along rapidly and give fruit in July. These potted plants are to be had of the market gardeners at this season, and a dozen of them will supply a common family.

When the plants are put out about four feet apart, they should have frequent hoeings, and the leaders should be headed in, to facilitate the forming and ripening of the fruit. Most of the blossoms are put out within two feet of the roots, and the shortening-in of the plant forces its energies to fruit-bearing. The fruit will be larger under this treatment, and will be some days earlier.

Some cultivators lay brush down for the vines to run on, and others tie them up upon a lattice. We think both these methods retard the ripening. The heat of the earth in August is of great service in maturing this fruit. The early plants should have a southern exposure under a fence or wall.

This crop when it first comes to market, bears a high price, selling for four and five dollars a basket. It soon falls to a dollar or less, and not unfrequently becomes a drug at any price. The enormous quantities that are now preserved for winter use in cans, and manufactured into catsups and pickles, cannot fail to affect prices, and make them a paying crop.—[Am. Agriculturist.

Soap for Killing Borers in Trees.—S. S. Green, of East Cambridge, Mass., has made an experiment with this article. He has in his garden a white ash tree, which was full of these worms, so fatal to their fruit and ornamental trees. He covered every place on the tree which appeared to be wounded by them, with common hard soap, nicely rubbed into the place where the borer seemed to have entered. During the rains of this week, the soap dissolved and penetrated to the worms, which forced them out by scores causing their death. We think this the best remedy yet discovered for destroying these nuisances to gardens and orchards.

Pruning Fruit-Trees.

In the Horticulturist for May, Wm. Saunders writes:

In former remarks on winter pruning, it has been suggested to prune very sparingly all those of luxuriant and thrifty growth; such will now require attention in picking out the points of all shoots that exhibit a tendency to luxuriance. This pinching process appears to be looked upon by many as a *fancy* species of cultivation only applied to dwarf pear-trees. So far from being so, it is, practically, the most important subject to which the attention of fruit growers can be directed. By its means, they can induce fruitfulness in young trees, and keep them uniformly productive. It is economical, inasmuch as it is easier to rub off a bud than to saw off a branch, and, when thoroughly understood and acted upon branches are permitted to grow only when and where they are wanted. Fruit-trees, when healthy, and growing in good soil, have a tendency to make strong, yearly shoots at the extremity of the branches, the lower buds on the tree remaining dormant, or producing only weak shoots. *Pinching* consists, practically, in checking, at an early state of growth, these robust shoots, by breaking out their points; this retards their longitudinal extension, and causes a development of latent buds, producing short, lateral growths, which are the future fruiting points. Our most successful fruit growers are becoming convinced that this is the only method of securing full benefit from good cultivation; otherwise, manuring only increases wood growth, to be lopped off at the winter pruning.

When the size of a tree is the only object in view, summer pruning should not be practised.

Pears on the Quince.

At the last meeting of the London Pomological Society, Mr. Rivers, of Sawbridgeworth, exhibited three pyramidal Pear trees, and with them the following memoranda. He said: "The trees (Louise Bonne of Jersey) are from seven to eight years old. No. 1, a tree budded on the Quince, has struck root from the collar of the graft; as soon as this took place, about three or four years ago, all the Quince roots died, for, as will be seen, the stump is quite bare. These (Pear) roots penetrated into the solid, calcareous clay to the depth of nearly five feet, and so hard was the clay that the spade could not penetrate it so as to take them out to their full length. As soon as these roots struck into the clay the tree ceased to bear, and its shoots become full of cankery spots, the leaves more green than those on the Quince roots, and the young shoots more vigorous, although they cankered and died back. Out of a plantation of two thousand pyramids of this variety on the Quince, only the tree now sent and another have struck root from the collar of the graft, and both are in the same state. Last year, every tree except these two was covered with the very finest fruit; the tree sent did not bear one—the other produced two or three, which were cracked, spotted and worthless. No. 2 is a tree of the same sort, on the Quince stock, which grew within five feet of No. 1; this, in common with the others in the same plantation, has no canker, and has borne fine, clean fruit. The soil is moist, and brings on moss to a small extent. No. 3 is on the Quince and is a young tree that has been twice removed. Trees of this kind, where soil is not favorable (and I have a part of my nursery the soil of which is very wet and cold), I remove biennially, giving them a compost of sand and rotton manure. In a few years, their roots become like those of rhododendrons, and keep close to the surface, so that the trees keep in good health, and bear profusely. The fibrosity of the roots of the tree sent is remarkable.

These specimens were extremely interesting, showing as they did that the Quince was better suited for certain kinds of soils than the Pear stock; they also showed how necessary it is to keep the roots of our fruit-trees near the surface, and indicated that, under certain circumstances, at least, to deep rooting we owe barrenness and canker.—[Gardener's Chronicle.

Roses.—A knowing man writes to the Gardener's Chronicle about Roses: "Let them have an eye to every point that tends to perfection—vigorous habit, constancy, free blooming, and, above all, handsome and abundant foliage, not forgetting high perfume. These are what we must look for, now-a-days, in every new Rose that is brought before the public, and a variety that has not all these qualities more or less in advance of its compeers, has no business to pass muster. Above all, however, let handsome foliage be aimed at; for, as an old cultivator of this lovely flower, I can answer for it that a clean, luxuriant foliage is the very making of a Rose. We amateurs do not want varieties from which a choice bloom can only be plucked now and then. To any beginner in the cultivation of Roses, I would say: "Never rest till you have procured Madame Laffay and William Jesse, and let him add Coupe d'Hebe, Jules Margottin, William Griffiths, Baronne Hallez, Duchess of Sutherland, Blairi No. 2 (Hyb. China), Auguste Mie, Prince Leon, Geant des Batailles, Baronne Prevost, Pius IX., and Mrs. Rivers (the best white)."

Have you Water in your Stock Yard?—If not, listen to advice, and if it be possible, introduce it. Either set a ram or a windmill, or one of the self-acting wells; or lay a pipe from a spring on the hill; or throw a dam across the brook, and lay a pipe from that; somehow or other manage to have flowing water, and plenty of it, so as not to drive your stock to the brook, or have to pump, or turn a crank half a day to draw water for them. One has no idea of the convenience till he has tried it. Sit down and make an estimate of the time it takes in four months to draw water for forty head of stock, or to lead or drive them an eighth of a mile to water, and our word for it, the water will come in a pipe if there is any such thing.—[Western Farm Journal.

Renovating Grass Lands.—The very best way, undoubtedly, to improve meadows or pastures that have become impoverished, is to plow them up, manure heavily, and seed them down again. If infested with daisies and other weeds, they should be broken up in the fall, and planted with potatoes or other root crops for several years, and then laid down to grass. If, however, the land is low and wet, and weeds not very troublesome, they may be plowed in midsummer, manured and harrowed thoroughly, and in September sowed with grass seed. In most cases a fair crop of hay will be realized the next season.—[Farm Journal.

Let it be more and more firmly fixed and deeply impressed upon the minds of all concerned, that good crops depend, in a great measure, on saving and using everything that will fertilize.

Artesian Wells in New Mexico.

The following interesting communication relating to Artesian Wells on the table lands of New Mexico, and the results of the U. S. Government Expedition to that country, under command of Captain Pope, is from one intimately acquainted with the subject and the history of the expedition referred to:

The subject of reclaiming, by means of Artesian Wells, some portion at least of the immense region formed by the high table lands lying along the eastern base of the Rocky Mountains, and the valleys included within the ranges of these mountains—a region equal in extent to that already formed into States, but at present entirely useless from want of water—is gradually assuming greater importance as the tide of emigration approaches the western limit of the cultivatable lands, and as the increasing intercourse with the PacificCoast and the settlements of New Mexico and Utah brings more fully into notice the inconvenience and danger arising from the interposition of a desert, 1500 miles in width, between the different parts of the nation. A Government expedition, under the command of Captain Pope, U. S. Topographical Engineers, has been engaged during the past two years in making experiments on the possibility of obtaining water by Artesian wells on the table lands of New Mexico, and especially on the so-called "Llano Estacado." The result of these experiments has been to show that the Geological condition of this region is eminently favorable to the success of these wells; that ample underground reservoirs of water exist, and, although water which rose above the surface was not actually obtained, yet the finding of several successive streams of water, each of which rose higher than the previous one,—the last rising to within 160 feet of the surface,—seems to prove beyond a doubt, when the geological character of the plain is taken into account, that the work needs only to be carried to a greater depth to bring water above the level of the ground. That the data on which this opinion is based may be fully understood it may be worth while to give a description of the region in which the experiments were made. I will, therefore, describe the principal characteristics of this region, which affect the question of Artesian Wells, and will then endeavor to give some idea of the natural advantages of the country, and those which might be developed, were a supply of water to be obtained.

The "staked plain" presents the largest unbroken surface in all that vast extent of table land which stretches along the eastern base of the Rocky Mountains, throughout the whole length of the continent. It extends from the 31st to about the 37th parallel of latitude, and has an average breadth of about 200 miles. Along its eastern base burst forth the springs which form the head waters of the Red River of Louisiana, the Colorado, Brazos, and other principal streams of Texas. To the eastward of this line lie the rolling prairies of Northern Texas, well watered, well timbered, one of the most fertile and finest agricultural regions on the continent. To the westward stretches away to the base of the Rocky Mountains, an unbroken plain, treeless, waterless, and apparently desert. West of the staked plain, for one hundred and fifty miles to the Rio Grande, the country is exactly similar in its geological characteristics, but is broken by three parallel ranges of mountains about fifty miles apart. The strata forming the surface of the "staked plain" and of these valleys, have been upheaved and broken through by the eruption of these mountains, and their edges are exposed along the sides of the different chains, from which they slope to the centers of the valleys. These strata, being partly pervious and partly impervious to water, the rain falling on the mountains is absorbed by the pervious strata, and being prevented from escaping by the impervious strata above and below, gradually fills the pervious strata, forming enormous reservoirs. When these are reached by a shaft sunk in the valley, the water is forced by hydraulic pressure to rise in the shaft to the level of the exposed edges, or until having reached the surface of the ground, it is no longer confined. This is exactly the condition of the region in question, the strata forming the staked plan being exposed along the Guadaloupe Mountains at a point about two thousand feet above the general level of the plain, and those forming the valleys further West, along the mountains, on either side. The fall of rain on these mountains is very great, as is proved by the observations of the party, and by the numerous springs which rise among them, but are immediately absorbed by the porous strata before reaching the plain. Several considerable rivers are known to be absorbed in this way. Streams, however, which reach the surface of the plain, as is sometimes the case with these, when swollen by heavy rains, are no longer absorbed, the immediate floors of the valleys being impervious. All conditions necessary for the success of Artesian wells are therefore most perfectly fulfilled in this region.

The natural advantages of the country are such that they require only water to enable them to be developed, to change this tract, now desert and unproductive, a constant expense and inconvenience, not only worthless, but a bar to the proper connection and development of the different parts of our nation, into a rich and productive region, supporting its tens of millions, and a bond of union instead of an insurmountable barrier between the widely separated States of the Mississippi Valley and Pacific Coast. Immense quantities of gypsum and calcareous marls are found within it, enough to supply fertilizing material for the world. But while these agents are so abundant, the soil of the valleys themselves is most fertile, and the climate, while one of the healthiest and finest in the world, is most favorable also to the growth of almost all agricultural productions. The New Mexican, in the valley of the Rio Grande, with a plow made of two crossed sticks, and the rudest and most careless husbandry raises crops equal to those generally raised anywhere in the States. While depending on irrigation he never knows the evils of drought or over-moist weather. All grains grow with the greatest luxuriance, while vegetables attain a size and perfection unknown elsewhere. Fruit seems here to gain the greatest possible flavor and size. The climate seems to have all the advantages of a tropical one without that too abundant moisture which causes fruits and vegetables to lose in flavor while gaining in size. And it is perhaps in its peculiar adaptation for the culture of one fruit that the greatest value of this region, in an agricultural sense, lies. The grape attains a perfection here unequaled on this Continent and probably unsurpassed in the world. The vines were probably introduced here by the Spanish missionaries, or the first European settlers. Rude as their husbandry is, in every other respect, the New Mexicans cultivate the vines after the most approved methods of European vineyards. The soil is peculiarly adapted to the grape, being a mixture of calcareous soil with the "debris" of volcanic rocks. The soil of any part of this region effervesces strongly with an acid, showing an abundant presence of lime. The same is the case with the soil of the best vineyards of Madeira, and this kind of soil is known to be peculiarly favorable for the grape. The destruction of the old and long cultivated vineyards of Europe and Madeira by a mysterious blight, renders this subject of the more importance, as it is probable, at least possible, that a new region would escape, and these table lands and valleys may yet supply the world with wine. The climate is also peculiarly favorable to the packing of raisins.

As a stock-raising country, this region is unequaled. The table-lands and valleys are covered with a thick growth of grama grass remaining green and nutritions during the whole year, and growing everywhere in the dryest and apparently most barren spots. The climate is peculiarly favorable as no snow falls during the year, and it is so pure and salubrious that the diseases so fatal among domestic animals in the States, are absolutely unknown. A diseased horse or sheep is a curiosity, and these animals are, it is well-known, more liable to disease than any others. The New Mexicans formerly possessed immense herds of cattle and sheep, while the Spanish troops kept the Indians in subjection, but more recently the Apaches and other tribes have swept away nearly all.

The mineral resources of the country, at present mostly unavailable from the want of water, sufficiently near the mines, it is impossible to estimate. Scarcely a range of mountains is destitute of veins of one or more minerals. In the Organ Mountains, a few miles east of the Rio Grande, are found silver, lead, and magnetic iron ore. In the mountains, west of that river, mines of copper and gold have been long known, and occasionally worked. Immense quantities of iron ore are also found. Gold has been discovered in several ranges of mountains, and it is reputed, by tradition, to exist in many more, and the geological character of the ranges is such as to render this highly probable. The distance and difficulty of transportation, the hostility of the Indians, and the inertness of the people have prevented these mines from being explored or worked to any extent, but that they will at some time not far distant be made to yield up their treasures, the value of which cannot be computed, is certain.

There are many other small items, which will be of more or less value, such as the use of the fibre of the Spanish bayonet for making rope, &c., but which cannot be described at present. Many plants, peculiar to this region, are used by the natives for medicinal purposes, and some of them will probably be found of value.

Fuel, for all purposes of settlement, for some time, at least, will be furnished by the root of the mezquite bush. These roots grow from three to eight inches in diameter, and fill the ground to such an extent that five hundred wagon-loads were obtained by the party from about a square mile of ground, without, by any means, exhausting the supply. No other fuel has been used in the settlements of the lower part of New Mexico. The root makes excellent fuel, equal to the best known in the States.

As the strata composing this region are of the carboniferous era, and as coal has been found not far from its eastern border, it is to be hoped that beds may yet be found within this tract itself.

The importance to the government of the reclamation of these lands can hardly be estimated. Any expenditure which may be incurred in experiments, which previous results have shown to be as nearly certain of success as can be supposed possible in any experiment of the kind, would of course be nothing in comparison with the change of a country comprising one-third of our whole territory, from present worthlessness to fertility and productiveness. That it is generally felt that the wants of the race demand the extension of the inhabitable lands so as to comprise those immense tracts now desert in both hemispheres, the experiments of the French in Algiers, &c., sufficiently show. And if any region supplies all the conditions most favorable to success in such an experiment, combined with those natural advantages which will give such a success the greatest possible value, it is the region now in question.—[New York Courier and Inquirer.

The most complete work on the melon (says the editor of the Horticulturist) is that of M. Jacquin, Paris, but now difficult to procure. His list contains eighty-eight varieties, with as many colored figures, each one being accompanied by a representation of a slice of the fruit, to indicate the color and thickness of the flesh and rind; an example is also given of the branch of an individual variety of each class, displaying the foliage, blossoms and manner of growth. The work is founded on practical experience. The manner of pruning recommended is this: When the plant has four leaves, exclusive of the cotyledons, it is cut down to two; the branches proceeding from their axils, having just unfolded the third leaf, are again cut down to two; and if these fail to show fruit blossoms, the same is repeated, when they again invariably do so. The object is to insure the emission of fruit blossoms, which, in the melon, usually occurs on the second ramification from the parent stem, but always on the third.

Tunneling. — We take the following fair sample of tunnel labor from the Nevada Democrat of the 27th:

"The Montezuma Tunnel Company, whose claims are located on the hill of the same name, are pushing ahead their work with great vigor. They first sunk a shaft to the depth of 212 feet and drifted in different directions about 300 feet in all, and found gravel which prospected two and three dollars to the pan. In consequence of the great quantity of water in the shaft, they were compelled to abandon it for a time. They accordingly commenced driving a tunnel into the hill, in order to drain the claims. They have some fifty feet yet to run, and are still in the solid rock which has to be blasted. This company have been at work three years, expended in money and labor about $40,000, and as yet have taken nothing out of the diggings. Their claims, however, are extensive, and they are sanguine of taking out gold enough, at some future day, to reward them for their money and labor expended."

Kill the Worms.—Now is the time. Not a day to be lost. It must be done before warm weather hatches the eggs that you will find on all your fruit trees, closely glued to the twigs generally of the last year's growth. Climb up in the trees and look about you carefully, and you will see little shining spots on the bark that look as though they had been varnished. You can scale those masses of eggs off with a knife and burn them, and thus destroy more worms in one day than in a week after they have hatched and crawled out upon the limbs.

Eggs as an Article of Food.

Mrs. Bateham, one of the most sensible and practical housewives of Ohio, makes, through the Cultivator, the following exposition of the interesting subject named above:

With the opening of spring comes the annual harvest of eggs, inviting even the poorest to a feast of fat things; for what is more suggestive, not only of plenty, but of rich living, than eggs, when we remember that they are both the product and the source of animal life.

The yelk of eggs consists mainly of oil suspended in water by means of albumen, and the white is almost pure albumen and water. The albumen, of which eggs are so largely composed, is highly nutritious; indeed, all nitrogenous articles of food, and this includes most of the substances we eat, whether animal or vegetable, are converted into albumen before they can aid in the nutrition of the body.

The yelk containing so much oil is less readily digested than the white, provided the latter be sparingly cooked. White of eggs is alkaline, and contains some common salt. The animal matter which it contains is the same as that found in the chyle and the blood, and besides these it contains some unorganized membranes, which are supposed to aid materially in its digestion. Newly laid eggs are more easily digested than others, and eggs lightly boiled, either in or out of the shell, more so than hard boiled or fried ones, as the following experiments which have been tried will show: Raw eggs, well whipped, digested in a healthy stomach in one and a half hours; unwhipped, in two hours; soft boiled, in three hours; and hard boiled or fried, in three and a half hours.

In most farmers' families, at this season of the year, eggs are freely used for food, taking to considerable extent the place of meat; and as variety in the modes of cooking is quite desirable, some suggestions and recipes may be useful, at least to beginners in housekeeping. Dropped eggs are probably the most healthful form in which they can be prepared for the table. Break the eggs very carefully into a pan of scalding water, and let the water come gradually to a boil, removing the eggs with a skimmer as soon as the white is set. Serve on a hot platter with a little salt, pepper and butter, or lay the eggs on hot buttered toast. For invalids, use cream instead of butter.

Boiled Eggs.—Drop them in the shell into boiling water, and boil from two to three minutes, according as you wish the whites lightly or thoroughly done. A fresh laid egg requires a half minute more of boiling than an old one.

Poached Eggs.—Beat the eggs to a froth, add salt, pepper and butter, turn them into a buttered pan, and cook slowly over a few coals, or better yet, over boiling water, stirring constantly till delicately set, then serve on toast or vegetables, or in a dish by themselves.

Baked Eggs.—Butter an earthen baking dish, break the eggs in carefully, sprinkle a little pepper and salt over, lay on a few crumbs of butter, and bake slowly till the white is set.

Fried eggs are commonly cooked too much. They should not be turned, but the hot fat should be constantly poured over them with a spoon till the white is set, when they are ready to be served.

Omelette.—Beat six eggs, add a little minced boiled ham or other meat, or if preferred, a little chopped parsley and onion, with salt, pepper and two ounces of butter. Turn it into a greased frying pan over a slow fire, or over boiling water, and stir till it begins to set. When brown on the under side, it is done; they lay a flat plate over the top, and turn your pan upside down. It should be cooked slightly, and eaten quickly.

Boiled Custard.—Boil the milk, and set it away to cool. Beat four eggs for each quart of milk, and stir them in, adding salt, sugar and nutmeg to the taste; cook slowly over water, stirring constantly till it thickens, taking care to remove it before boiling. Turn into cups, and serve. For a richer custard, take cream instead of milk, and the yelk of six eggs and whites of three, beating the reserved whites to a stiff froth to pile on the cups.

Soft Custard.—These require sixteen yelks to a quart of cream or new milk, six ounces of white sugar, and spice to the taste; cook slightly and slowly, and then turn into cups. Take the whites of eight eggs, a spoonful of powdered white sugar, and six drops essence of lemon, and beat till it stands alone, then pile it on the cups of custard.

Lady Franklin's Arctic Expedition.—A sum of £500 has been placed by Lady Franklin in the hands of Admiral Sir Francis Beaufort, Sir Roderick Murchison and Captain Collinson and Sherard Osborn, for the purpose of encouraging investigation by the masters of whalers frequenting Baffin's Bay, into the mysterious circumstances reported by them on their return from the fishing grounds last autumn. It will be remembered that articles of wood, copper and iron, belonging to European ships, were found in the hands of the natives at Pond's Bay, who stated that they had been procured from two ships, one of which had come on shore, while the other was still imbedded in the ice.

From another Esquimaux tribe, statements requiring the most searching investigation were obtained—that parties of white men had been seen further westward. The ships thus wrecked, or icebound, may possibly be the long-lost Erebus and Terror; or, more probably, are part of Sir Edward Belcher's abandoned vessels, which, like the Resolute, only waited their time, in order to free themselves from the ice, and be again afloat. Under any circumstances these facts are of great interest, and as Lady Franklin's private expedition, now in preparation for the yet undiscovered remnant or remains of Sir John Franklin's expedition, is directed to the mouth of the Great Fish River without delay, it is satisfactory to know that the intermediate locality, above alluded to, though of secondary importance, will yet not be wholly neglected.

The Harbor at Niagara Falls.—The late soundings of the river about Niagara Falls have developed a harbor there of something like two hundred and fifty acres, giving from twelve to fifteen feet of water. A bar, running from the Old Schlosser landing nearly half way across to the Canada shore, has heretofore prevented the entrance of vessels to the basin below. This is to be removed this spring; a large pier is to be built out from the American shore, below the bar line and above the rapids, which will make navigation for the lake vessels to the mouth of the Mammoth Hydraulic Canal, now being built. When these enterprises are completed, the town of Niagara Falls will possess superior advantages for commercial and manufacturing interests.

Wicked.—It is not unfrequently the case that the kisses and attentions bestowed on the child of six years, are intended for her sister of sixteen.

The Spring Campaign in England and America.

The great meetings which, on either side of the Atlantic, inaugurate the contests of the Turf for the racing year, have already been had in England and America, and already have the observant in such matters been able to form an idea of the degrees of glory with which they are likely to go off. According to all appearances, never was the racing prospect more brilliant than it is with us, and we can well afford to pause at this portion of the game, and compare exploits with England as far as we have gone.

In England, they have thus far held the Liverpool, Doncaster, Salisbury, and Warwick spring meetings. In the United States, we have had the Charleston, the Augusta, the Mobile, the Natchez, and the Columbus races. Now, as we cannot place the horses who performed in either country side by side, the most we can do is to compare their exploits with one another, in the way of time.

The best mile made this year upon an English course, was made for the Chesterfield Handicap Plate at the Doncaster spring meeting, as reported in our last; and that mile was made by Mysterious Jack, a three years old, by Sir Tatton Sykes, in *one minute and forty-four seconds*, carrying 77 pounds. The next best mile was made in the Trial Stakes, at the same meeting, by Old Trick, a three year old, by Sleight of Hand, in one minute and fifty seconds. The best mile at the Warwick spring meeting, as published by us, was made by the celebrated Fisherman, who beat Gemma di Vergy and Melissa in 1:55; and the next best was performed by Collingwood, who beat Early Bird, Malacca, and Weathercock, in 1:59.

The best two mile heats of this latter meeting were accomplished, as will be seen by reference to the table under our racing head, in the slow time of 4 minutes and 5 seconds. At the Salisbury races, however, Apathy, a three year old, by Anandale, made a two mile heat in 3:40, carrying 100 pounds.

As a set-off to this two mile heat of Apathy in 3:40, and the heat of Mysterious Jack in 1:44, we have the splendid exploits of Charleston, Sue, Washington, Dallas, Kate Hunter, Don Juan, Marksman, Birdcatcher, and others, on the various southern fields. First among these races, may be named that of Charleston, at Columbus, as reported in this day's paper, where he beat Don Juan and Birdcatcher, in a race of mile heats, in the extraordinary and unprecedented time of 1:46; 1:46; 1:48½, and 1:47½, the second heat being a dead heat between him and the Darkness colt, now called Don Juan. It is true that neither of the above miles equal the single mile of Mysterious Jack, for the Chesterfield Handicap, by two seconds; but then, it must be borne in mind, that Mysterious Jack was required to go but for a single mile dash, and was free to exhaust all his powers for that solitary feat; while Charleston and his comrades were obliged to reserve their powers, to a certain extent, at first, in order to be able to sustain the tax and drag of a long race. Either of the heats of Charleston are therefore superior to the single heat of Mysterious Jack, in the mere point of time; while the last may be said to exceed Mysterious Jack's achievement, most of all.

We have called this an unprecedented race, and so we believe it is. We know of no four successive miles which have been run, single heats, in such low time; and the merit of them will be speedily seen, when, by adding them together, they will be found to make an aggregate of only *seven minutes and eight seconds* for the four miles, which is 11½ seconds less than the wonderful time of Lexington, in his great exploits on the Metairie Course, in 1844.

We have also in our American races, a fourth heat, by "Charleston," in 1:46, over the Washington Course, Charleston, the first three having been performed, respectively, in 1:49¾, 1:47½, and 1:50. Again, we have Charleston beating Nicholas I. and Ada Tevis, over the same course, in two mile heats, in 3:43¾, 3:39½, 3:44. And again, on the same course, beating the Darkness colt, in 3:40¼ and 3:43. Finally, on the last day of this meeting, we have Charleston beaten, in a race of four mile heats, by Sue Washington, in the time of 7:39, 7:40, 8:00, and 8:15½, the third heat obliging Charleston to withdraw, and the fourth heat killing Frankfort.

Here, then, is some exploit and promise, and when we come to compare it with the record made in the Liverpool, Doncaster, Salisbury, and Warwick, and more particularly with the respective detached exploits of Apathy and Mysterious Jack, we find ourselves decidedly ahead in the season, by the only test which can possibly be brought to bear upon competitors at a distance.

Encouraged by this record, we see no reason to apprehend that we shall not be able to contend with credit against the racers of England through the noble champions of our turf who are already in their fields. On the contrary, everything that we can find in the calculation—everything that stands on the record in the way of past exploits, invites us to believe that we have triumphs in store for us, that are more tangible and profitable than mere comparisons of time. Thus far, we have made but two entries for the English purses (the Stockbridge plate and Brighton champion stakes), but we soon hope to hear that Pryor or Lecomte are marked for some of the heavier prizes, and that they have selected the Ascot or the Goodwood meetings for that grand superior trial which will be truly worthy of the audience of a world. And if we mistake not, the world will, in case of such a contest, pause, all around, for a few minutes at least, for the purpose of looking on; and all we have to add just now on this subject is, that if we should win for the third time a grand national contest over our old friend and foe, Great Britain, we shall be very likely to receive with the purse, a good hearty round of the world's applause.—[Porter's Spirit.

Indian Summer of Life.—In the life of the good man there is an Indian summer more beautiful than that of the seasons—richer, sunnier and more sublime than the most glorious Indian summer the world ever knew—it is the Indian summer of the soul. When the glow of youth has departed, when the warmth of middle age is gone, and the buds and blossoms of spring are changing to the sear and yellow leaf, then the mind of the good man, still ripe and vigorous, relaxes its labors, and the memories of a well-spent life gush forth from their secret fountains, enriching, rejoicing and fertilizing; then the truthful resignation of the Christian sheds around a sweet and holy warmth, and the soul, assuming a heavenly lustre, is no longer restricted to the narrow confines of business, but soars far beyond the winter of hoary age, and dwells peacefully and happily upon that bright spring and summer which await him within the gates of Paradise evermore. Let us strive for and look trustingly forward to an Indian summer like this.

An Emeralder, in writing his life says: "I ran away from my father, because I discovered he was my uncle."

The Use of Spectacles.

An article in the North British Review, evidently from the pen of Sir David Brewster, contains some interesting remarks on the use of spectacles. Persons who have enjoyed distinct and comfortable vision in early life, it is remarked, are the most likely to appreciate the benefit to be derived from glasses. Between the ages of thirty and forty, they begin to experience a change in sight. This is the commencement of *long sightedness*, growing out of an incipient affection of the crystalline lens, beginning at the edge and proceeding towards the center. During the progress of this alteration, much inconvenience is experienced, as no spectacles seem to be serviceable in giving correct vision. Happily, however, two or three months ends this difficulty, and as soon as the alteration is completed, distinct and comfortable vision is at once obtained by the use of well selected glasses of a convex figure. During this transition state it is important that the eyes should be subjected to no severe strain, and great regard should be paid to the general health.

The material of spectacle lenses should be glass of a very low dispersive power, or better still, of rock crystal. They should be double convex; the proper radii of the inner and outer surfaces being in glass as 6 to 1, and in rock crystal as 14 to 1. They should be as thin as practicable. To correct a common error in the manufacture of lenses, by which the distance between the centers of the lenses is made precisely equal to the distance between the centers of the pupils of the eyes, the following rule is given:

"Draw (on paper) an isosceles triangle, the two sides of which are equal to the distance of each pupil from the point to be seen distinctly; while the third side or base is equal to the distance between the pupils when the eyes view that point. The set off on each side of the triangle, from each end of the base, the distance of the center of the lenses or their frames from the pupil, and the distance of these points will be the distance of the centers of the lenses required."

The long sighted person will generally, for ten or twelve years, require glasses only for reading or work done by hands, but as life advances other spectacles will be needed for objects at greater distances, and it will be of great advantage to have two or three pairs of different focal distances. It is a very incorrect notion that it is prudent to avoid the use of artificial helps to the eye as long as possible. The human eye is too delicate a structure to bear continued strain without injury, and the true rule is to commence the use of glasses as soon as we can see better with than without them. For special purposes, as reading a very fine print or examining maps, a hand reading glass two and a half inches in diameter, to be used in conjunction with spectacles, and never without them, is strongly recommended. The practice frequently indulged in of using an eye-glass whose frame is grasped by the muscles of the eye-brow cannot be too strongly condemned. Whenever it is found necessary to moderate the quantity of light admitted to the eyes by means of colored glasses, they never should be blue, which are more mischievous than useful. Green glass is better, but the best of all is a colorless glass of imperfect transparency, known by the name of "neutral tint glass," by which the intensity of the transparent light can be diminished to any desired degree.

Total Length of Submarine Cables Already Laid Down.—The following table gives the length of each of the submarine cables which have been laid in different parts of the world since the first attempt to establish subaqueous communication between Castle Garden and Governor's Island:

	Miles.
From Dover to Calais	21
From Howth to Holyhead	65
Between Ireland and Scotland	20
From England to Holland	115
From Dover to Ostend	60
From Balaklava to Varna, Black Sea	374
Between Sardinia, on the main land, and Corsica	60
Between Corsica and the Island of Sardinia	6
Across the Gulf of St. Lawrence, from Cape Breton to Newfoundland	74
Across the Straits of Northumberland, between Cape Sormentine and Prince Edward Island	10½
Total miles now laid	805½

When the Atlantic cable shall have been laid, the total will be increased to nearly twenty-five hundred miles.

Sunset.—On the arrival of an emigrant ship some years ago, when the North Carolina laid off the battery at New York, an Irishman hearing the gun fired at sunset, inquired of one of the sailors what it was.

"What's that?"

"Why, that's sunset!" was the contemptuous reply.

"Sunset!" exclaimed Paddy with distended eyes; "sunset! oh Moses! and does the sun go down in this country with such a clather as that?"

[Premium Manufactory.]

Hudson's Golden California Mustard.

The proprietor of this manufactory would invite all who feel an interest in California productions to visit his establishment and examine his Golden Mustard. This article is made of California Seed of the very purest quality, and put up in tins of 10 lbs., 5 lbs., 3 lbs., 1 lb. and ½ lb., and in glass of 1 lb. and ½; and it can be had at prices lower than Eastern prices, and at the same time proved to be purer and better than the imported.

The proprietor also manufactures a very superior article of Salad Oil, to which he desires to call the attention of the public. Sample bottles of his make will be sent to hotels and large purchasers when desired.

For any further information regarding this Mustard, we refer to the principal business houses in this city.

Purchases at wholesale or retail are specially invited to call at the office,

22 Front street, corner of Pine,
H. C. HUDSON.

P. S.—The highest price always paid for pure A No 1 Mustard Seed. v7-8 3m

Spermatorrhea can be Cured!

THE GREAT RUSSIAN REMEDY!

THIS unparalleled specific for the above fearful complaint, recommended by the Medical Societies of Berlin, Paris and Vienna, and by Dr. Andrew Ure, of London, has recently been imported by the agent of Johannesburgh & Co., the manufacturers, and is now for sale in San Francisco. A cure is guaranteed in from three to fifteen days, even when paralysis has taken place. Address Box 14, San Francisco Post Office, inclosing $10, when sufficient will be sent for a perfect cure; and the harrowed mind of the almost lunatic victim of passion put to rest. We have also half packages at $5—they will be put up carefully and sent per express, free from detection.

BOOKS, &c.

The Fruit Garden.

By P. Barry,

Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, The Villa, the Mansion and Cottage. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express*

Copies of either of these books sent by mail (post-paid), for $2, remitted to

Embracing the Physiology, Classification, and the Culture of Plants; with their various uses to Man and the Lower Animals, and their application in the Arts, Manufactures and Domestic Economy. Illustrated by 700 figures engraved on Wood and Steel, of which 100 are elaborately colored. One vol. large 8vo.

THE FARMER'S GUIDE. A Treatise on the Diseases of Horses and Black Cattle, with Instructions for the Management of Breeding Mares and Cows. By James Webb, Veterinary Surgeon.

HOW TO CHOOSE A GOOD MILK COW; or, a Description of all the Marks by which the Milking Qualities of Cows may be Ascertained. With a Supplement on Dairy Cattle, their Qualities, Management and Productive Results, with Hints for Selecting. Illustrated with Engravings.

☞ Samples of the above Books can always be seen at the Office of California Farmer, where Catalogues will also be found. v7-6

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.
By Epes Sargent, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

Sargent's Standard Speller contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. Globe Pattern Rubber Stocks, with and without Steel Rings. The whole coupling together in the most thorough workman-like manner complete for use placing in the hands of miners the most valuable gold washing apparatus ever yet introduced into the mining regions, and one which is destined to do more for the development of our mountain treasures, than all others yet introduced.

Orders per Mail or Express promptly executed.

Agricultural Seeds.

THE subscribers offer the following seasonable Seeds, the growth of last year, and of unsurpassed qualities. Dealers and other requiring large quantities will be served at very low rates:

Best quality Red Top Turnip;
Red Top Strap Leaf do
Large White English Globe Turnip;
do do do Norfolk do
Long White Tankard do
Yellow Stone do
Yellow Aberdeen do
Best American Improved Ruta Baga Turnip;
Imported do do do
Imported Purple Top do do
And twelve other fine varieties of Turnips.
Early Scarlet Horn Carrot;
Improved Long Orange Carrot;
Long White do
White Sugar Beet;
Yellow do
Long Red Mangel Wurtzel;
Yellow Globe do
Fine Mixed French Grass Seed, and other mixtures for Lawns.
Also—The finest qualities of Red, White, Dutch, Lucerne and other Clovers;
Timothy, Red Top, Blue Grass;
English and Italian Rye Grasses;
Orchard, Sweet Scented Vernal;
The Fescues and other Grasses;
With a large and complete assortment of

Vegetable, Flower and Field Seeds

of the Best Qualities, at reasonable rates.

DIOSCOREA BATATAS,

New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (Sorghum Sucre).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,

Smith's Pomological Gardens

AND

NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:
Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.
Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of extra size Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

. Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

The California Farmer.

SAN FRANCISCO, FRIDAY, JUNE 5, 1857.

Letters and Exchanges.

Our correspondents are kindly requested to direct all letters to us at our principal office, San Francisco.

Those journals and periodicals with whom we exchange will much oblige us if they will be particular to note this, so that we may be in receipt of their favors at the earliest date. Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco.

TO OUR PATRONS.

Please address all our Letters and Communications relative to the Farmer, to the Publishers, at San Francisco; and all Letters for Col. Warren, personally, to him, care of Farmer Office.

Removal from Sacramento.

The State Agricultural Rooms, which were at Sacramento, have been removed until the Fair, to Stockton, to facilitate that enterprise; and the Farmer Office, which was connected with it, has been removed to San Francisco; so that our whole edition of the Farmer will be hereafter issued at San Francisco. Our friends and patrons will please remember this and send all their parcels to us here.

We are constantly enlarging our circulation, and, we trust and believe, our usefulness; and we hope our friends will give us all their influence to increase our list of subscribers.

Tax on Industry.

Among the many ways which the Supervisors of San Francisco have devised to raise money to meet the wants of the county, we note a tax upon all branches of manufactures, and it includes all the minute branches of industry that are springing into existence in our State.

The *necessity* of raising money in this way we do not question, when we look at the county treasurer's office as it now appears to the citizens with its closed shutters and guards at its entrance —but this only reminds us of "shutting the stable door, &c."—the fable is clear; but the *wisdom* of such a policy we very much doubt.

The manufacturer and mechanic need encouragement, great encouragement, in this country, and not hindrance. There are causes enough at work to hinder his efforts, without this onerous tax upon his genius and labor.

We see too by the list of articles upon which this tax is laid, that it embraces every branch of industry that most particularly demands the fostering care of a wise government, and it must work most seriously against the future prosperity of the county of San Francisco, by driving from her borders many manufacturers that would otherwise preserve a business that would tend much to the prosperity of city and county. A little reflection should convince those in authority that it would be far better to encourage her working citizens and do all they can to make them prosperous, and thus enable them to succeed in their business, and help them to pay their already heavy taxes, arising from the enormous waste by public plunder. But this new, unwise and unjust burden will do more to paralyze the hand of industry and drive citizens to other counties, than any act that could be performed.

We trust those in authority will reflect upon the consequences of this unwise law, and take immediate measures for its repeal; and we hope the manufacturers and mechanics will not rest until they have examined the causes that led to its enactment, and will look to its effects upon this arm of industry, and unite and labor for its repeal. Of what use is it for the national government to impose a duty upon foreign manufactures, to protect home industry, if our State or city authorities add a tax that more than balances it? We ask where another city in the whole union can be found that has such a law to oppress its own laborers. Mechanics! as your friend, we ask you to look to this question.

The Crops.

What will croakers say now about short crops and high prices? Who can explain the sudden panic in the flour market? the great depreciation in the value of flour? and the ruin that has come upon those who were instrumental in getting up these fictitious prices?

See the grain fields of Napa, and of many other great grain-growing districts: hear the song of the harvesters. These will explain the cause of present state of things. We have an abundance. The bubble has burst; and those farmers that were wise sold their crops and are now enjoying the fruits of their labors.

We have never doubted an abundance. We have seen the increased breadth of land cultivated, and the general average of crops would more than balance those places where short crops were blazoned so widely.

Look at the shipments of barley of late, and the fall on that article; and yet there is still an abundance in market and the price low.

We predicted that flour would be as low as $8 by the 1st July. It has already been crowded upon the market by auction sales, and has been sold at $7 50 to $8 12, common brands. Does such a state of things show a scarcity? Where are the true prophets in this matter?

The Wagon Road Survey.—The Sacramento Union says that some time during the next week John Kirk, superintendent, and Frank Denver, disbursing agent, will take up their line of march to commence operations on the National Wagon Road. John Kirk will start from Sacramento with nine or ten well loaded wagons, and about sixty men. It is his intention to increase these latter to a hundred, when the work has been got fairly under way, and to break ground somewhere in the vicinity of Honey Lake Valley, extending his observations towards the Atlantic end of the road.

Green Valley.

Agreeable to our promise in last issue, we will give our readers some faint idea of one of the most beautiful natural homes in California. Although we see new and beautiful spots in many of our lovely valleys, yet there are some where nature seems to have been more lavish than in others, and where she seems to have been prodigal in her munificence.

Green Valley, the residence of Col. J. M. Harbin, is one of those spots chosen by the good goddess, where the owner might make a beautiful home; and, most fortunately, it has fallen to the ownership of one that will make it so. Green Valley is about nine or ten miles westward of Suisun City, some two miles from Cordelia, and the same distance from Rockville. The valley proper, of which we speak, lies between a high range of hills. The ranch of Col. Harbin (who is one of the earliest pioneers, having come to California in 1844,) contains over 5000 acres, and is as rich a soil, and as naturally luxuriant as any spot in California. To show the value of such land, we will state that Col. H. recently purchased 200 acres adjoining, paying $10,000 cash for it.

The ranch when we visited it in April was in luxuriance: grain fields promising well; the meadow or low land yielding heavy crops of native clover. Here the soil is from fifteen to eighteen feet deep, rich alluvial. A never failing stream of water runs through the entire ranch. This stream was once nine feet deep, but has decreased; yet it is now sufficient to drive a fine mill seven months in the year, which grinds the grain of this section of country. The mill can also be worked by steam power very cheap, as wood grows in the vicinity in abundance, and costs only the cutting, which is fifty cents a cord. The hill-sides are valuable, and abound with some of the choicest evergreen trees and ornamental plants we have yet found in the country. We noticed the following very remarkable kinds: evergreen oaks, of beautiful weeping varieties; a new cerassier, or wild cherry; calycanthus, or sweet scented shrub called alspice; rebes sanguineu, or red currant, flowering in long and beautiful vacemes; honeysuckles; azaleas; holly trees; wild roses, very fragrant; the bay tree, and several species of a very hard wood that never warps or bends when exposed to the sun and air. In addition to these there are many very choice and beautiful native flowers; and in order to make the place complete, building stone of several kinds, from the hardy granite to the fine freestone, is found in abundance. We learn that the proprietor has contracted to have erected for him, of this freestone, a large and commodious mansion, with all modern improvements and conveniences, fifty feet by sixty, with two fronts, east and south. Water can be conveyed to the roof of this house from living springs. A splendid garden is to be designed, and a fruit orchard added. This residence is to be inclosed by a stone wall five feet high, finished with cap stone. The extent of the inclosure may be conceived when we say the wall will be five miles in extent; and as it was partly built when we were there, we can say it will be the best wall in this State. The cost of buildings will be about $12,000, and that of the wall and stone about $8000. Col. Harbin is known as one of our most extensive stock dealers, owning and stocking some four or five large ranches beside the one where he resides. He has large herds of stock of all kinds, and is now arranging for introducing fine Durham stock the present year.

We learned the following interesting fact from Col. H. An old and valued friend and workman in the employ of Col. Harbin made a bureau of a peculiar oak that grows above Napa, for which Col. H. paid him $150. He sawed the wood, made and polished the bureau, with ordinary tools, in the early days of California, before there was any good furniture in the country. This same man made three more bureaus, of the same kind and price, and yet he was seventy years old when he did this work. This was five years since. This was the same workman who built the home in which Col. Harbin was born; and thus after a lapse of forty years he finds his way to California, to labor in this new land for the son of his former employer.

We tarried some few days at the present hospitable home of Col. Harbin, to whom and his lady we were indebted for many courtesies. Of the Colonel's liberality we need only say, it is proverbial, and we experienced it in the gift of a fine steed, which will often carry us over hill and dale; but never shall we pursue our duties without a grateful remembrance of his generosity, and a prayer for his health and prosperity, and that of his family. Would we had thousands of men like him who would use of their abundance to benefit their fellow-men.

New Map of California.

We are pleased to notice that the enterprising firm of Britton & Rey have lithographed an elegant Map of California, compiled by George H. Goddard, C. E., who has been engaged upon this map for the last six years. It is based upon the U. S. Land Survey, that being conceded the highest authority we have, and helped by mining and water companies' surveys, railroad surveys and explorations, State and county boundary surveys (made by order of the State Surveyor General), and every other reliable source of information. It contains all the new counties, many of which have never been mapped before, numbering forty-five in all, and all the corrections of county boundaries made by the last Legislature, and the elevations of the different passes, wagon roads, &c. The execution of the map is very handsome, the lettering distinct and the coloring admirable. The size is very convenient, and it is a highly useful as well as ornamental appendage to an office or counting-room. It can be obtained in this city, of the publishers, Messrs. Britton & Rey.

Condition of Our Indians.

Office Superintendent Indian Affairs,
San Francisco, Cal., Sep. 4, 1856.

Sir: In obedience to the requsition of the Department, I have the honor to submit the following as my annual report of the affairs of the California superintendency:

At the date of my assuming the duties of superintendent of Indian affairs for this State, the system of colonizing and subsisting Indians upon reservations selected for that purpose, and instructing them in the arts of agricultural labor, etc., had been commenced, and a reservation selected at the Tejon Pass, in the northern part of the State.

This reservation is in a prosperous condition. The number of Indians who reside here is seven hundred. The quantity of land in cultivation this year is about seven hundred acres; five hundred of which are in wheat and barley, and the remainder in corn and vegetables; most of the latter being the exclusive property of the Indians, cultivated entirely by them, and in their own way. The Indians work cheerfully, and perform all the labor upon the farm, white men being only employed as overseers and mechanics. Owing to the extraordinary drought of the past season, in that portion of the State, the product of the farm is much less than it should have been; enough, however, has been produced for the consumption of the place.

There are on the reserve eight adobé buildings —the first of which is one hundred feet in length by twenty-four feet in breadth, two stories high; it is used as a granary and storehouse. The second is the residence of the agent, and is sixty feet in length by twenty feet in breadth. The remainder are residences of the Indian chiefs, and are about forty feet in length by twenty feet in breadth. All the labor of building these houses was performed by Indians, except the mechanical part of it. The mill is in complete order, and by it all the grain produced upon the place is manufactured into unbolted flour before it is issued to the Indians. The property used in conducting the farm is twenty-six horses, thirty-eight mules, seven oxen, eight wagons, and fourteen plows.

Fresno and King's river farms.—Owing to the difficulty of procuring a suitable location for a reservation in the central portion of the State, no permanent selection has yet been made; but, in order to provide for the Indians according to the intentions of the government, land has been rented at Fresno and King's river, and the Indians collected and subsisted at these points in the same manner as upon permanent reservations. The crops consist of seven hundred acres of wheat and barley, and 100 acres of corn. Owing to the drought the wheat and barley crop was an entire failure. The corn, having been irrigated, will be an ordinary crop. This failure of the crops will be a source of serious difficulty to the superintendency. There are about three thousand Indians in the vicinity of these farms, all of whom could have been provided with food had the crops been successful. The drought having been general in this region, grain can only be purchased at exorbitant rates, such as would not be justified, except to prevent starvation. Every precaution, however, has been taken to prevent the consequences of this misfortune. The agents have been instructed to turn the attention of the Indians to their mode of living before the care of the government had been extended over them; and parties have been sent to the mountains, in various directions, to collect acorns, berries, seeds, and such other food as they were formerly accustomed to subsist upon; and, as if to demonstrate the fact that Providence never leaves any portion of the human family entirely unprovided with the means to sustain life, the phenomenon exists that the salmon, which for several years have failed to make their appearance in the San Joaquin river in any numbers worth mentioning, are this year abundant in that stream, and the prospect seems to be that the threatened famine will be in a great degree averted by this providential supply of fish from the ocean, though it is distant from the coast, by the meandering of the stream, some three hundred miles. A portion of the Indians from the farms have been removed to and encamped upon the river, and every facility furnished them for catching and curing fish, which, should the supply continue, will enable them to provide a sufficient quantity for a great portion of the winter. Another source, which is now looked upon as of great importance, is the Tula lake, lying about fifty miles northwest of the San Joaquin river, which abounds with fish of excellent quality, and is, during the winter season, the resort of an unlimited number of wild geese and ducks, from which the Indians have heretofore, when undistured by the whites, obtained a comfortable subsistence. Agents Lewis and Ridley are now examining the lake country for a suitable location, to which, if found, it is intended to remove some ten or fifteen hundred of the Indians for support during the winter. Although the prospect for these Indians seems to be gloomy, yet I have great confidence that, by industry, energy, and judicious management, we shall be enabled to provide for them in such a way as to prevent starvation, and preserve the peace of the country.

Passing from the Fresno, we have a much more cheering prospect at Nome Lacke reservation, at which place there are collected about two thousand Indians. Land in cultivation, one thousand acres; estimated product of wheat, fifteen thousand bushels; corn, pumpkins, melons, turnips, and other vegetables in great abunnance. Nothing in the pursuits of industry could have been more satisfactory or interesting than the harvesting of the wheat crop; it was cut entirely with small German reaping-hooks, used by the Indians with extraordinary dexterity. About two hundred men, furnished with these sickles, cut the wheat and threw it into bunches, followed by a sufficient number of women and boys to bind it into sheaves and put into stacks ready for threshing. In this way, and at their leisure, in about ten days, taking it as it ripened, the entire harvesting was completed, all the labor having been performed by the Indians, only three or four white men being engaged as overseers. It was estimated by the white men in charge of the work, that one hundred of these Indians could be selected who would cut and take care of as much grain as any fifty white men not regularly accustomed to this description of labor. Considering the fact that these Indians eighteen months ago were entirely wild and totally ignorant of everything connected with industrial habits, the labor they have performed, and the skill and dexterity they exhibited, are alone a sufficient answer to the question so often asked, "Can Indians be made to perform labor sufficient to provide for their support?" It is a fact, too, worthy of particular remark, that all this labor has been most cheerfully performed, no coercion or chastisement having been necessary. Attached to Nome Lacke a farm has recently been established at Nome Cult valley. This valley is located in the Coast Range of mountains, about forty miles east of Cape Mendocino, and there are in the vicinity about three thousand Indians. The farm is placed in charge of three of the employés from the Nome Lacke. The Indians are now engaged, under the direction of the persons in charge of them, in collecting acorns, manzanito berries, and other wild food for their winter supply, of which there will be plenty for their subsistence until crops can be produced for their support. There are on the Nome Lacke reserve three adobé houses. In addition to these improvements, there is in the course of erection an adobé building intended for a fortification. It is to be one hundred feet square, with a thick adobé wall ten feet high. In the centre will be erected a two-story substantial adobé building, which will be used as a guard-house and prison. The property used in conducting this farm are twenty-five horses, eight mules, seventy-seven oxen, twenty-one plows, and five wagons.

Klamath reservation is located on the river of that name, which discharges its waters into the Pacific ocean twenty miles south of Crescent city.

The Indians at this place number about two thousand. They are proud and somewhat insolent, and not inclined to labor, alleging that, as they have always heretofore lived upon the fish of the river, and the roots, berries, and seeds of their native hills, they can continue to do so if left unmolested by the whites, whose encroachments upon what they call *their* country they are disposed to resist. Their prejudices upon these points are fast giving way before the policy of the government, and no serious difficulty will be encountered in initiating the system of labor among them. The land on this river is peculiarly adapted to the growth of vegetables, and it is expected that potatoes and other vegetable food, which can be produced in any abundance, together with the salmon and other fish which abound plentifully in the Klamath river, shall constitute the principal food for these Indians. It is confidently expected in this way to avoid the purchase of beef, which forms so expensive an item at those places where there is no substitute for it. The establishment of the Klamath reserve has undoubtedly prevented the spread of the Indian wars of Oregon down into Northern California. There are on this reserve five log houses, seven board houses, four slab houses, one smoke-house, one poultry house and thirty Indian huts. The property used in conducting the farming operations is two mules, thirteen oxen and six plows.

Mendocino reservation is located fifty miles south of Cape Mendocino, on the Pacific coast. This reserve has been but recently established. The number of Indians at present collected there is about five hundred. They subsist almost entirely upon fish and muscles. They are furnished with boats, seines, and all the necessary tackle for fishing. A smoke-house has been erected, and the agent has a large number of Indians engaged in catching and curing fish for the winter supply of food. There are several rivers discharging into the ocean through this reserve, in which, at all seasons of the year, an abundant supply of fish can be taken. The coast at this point is somewhat shoaly, and the beach is covered with muscles, over which the tide ebbs and flows, and they are covered with an inexhaustible quantity of muscles, but little inferior in flavor and richness to oysters. These two articles will always, in case of a failure of crops upon the reserve, afford sustenance to the Indians without any other food. The land on this reserve, like that of the Klamath, will produce corn, wheat, oats, etc., but is peculiarly adapted to the production of vegetables. The quantity of land of this description amounts to several thousand acres, the products of which, with the fish and muscles of the rivers and coast in plentiful abundance, will afford support for a very large number of Indians, which I consider safe to estimate as not less than ten thousand. Indeed, I know of no location, either in California or elsewhere, so well adapted to the purposes of an Indian reservation as Mendocino. There are on this reserve eight houses. The property used to establish and carry on operations at this place is five horses, two mules, twenty-four oxen, one cart, and two plows.

In regard to the system of colonizing and subsisting Indians on reservations, I have only to say that it has so far succeeded entirely beyond my expectations, and is, in my judgment, the only system that can be of any real benefit to the Indians. It enables the government to withdraw them from the contaminating influences of an unrestrained intercourse with the whites, and gives an opportunity to provide for them just such, and no more, assistance than their wants from time to time may actually require.

Indians should be treated as wards, and the government should act as their guardian, judging for them at all times of their real wants, and providing for them accordingly. This has been the policy pursued in the California superintendency, and I have so far found no difficulty in its application.

With a view of obtaining information of the most reliable character in regard to the character, condition, mode of living, &c., of the Indians in California, I addressed, in June last, a circular to gentlemen in different parts of the State, containing interrogatories touching these points, from whose answers I have taken the following extracts:

A. Delano, of Grass Valley, Nevada county, July 30, 1856, says: "Their condition is not improved by intercourse with the whites. Owing to the occupancy of their lands by the whites for mining and agricultural purposes, their game is driven off, their acorn trees cut down gradually; their seeds and acorns, which is their staple food, are diminishing, and they pick up a scanty living by washing a little gold, and by the charity of the whites in voluntary contributions of bread, meat, &c. They are, in my opinion, diminishing in numbers from diseases consequent upon a mode of living new to them, and a few years will probably decimate them. The best provision that could be made for them, in my opinion, is to gather them upon reservations, and teach them to earn their own bread; but the difficulty of detaching them from their old camp-grounds, and their repugnance to labor, your experience has made you perfectly understand. My opinion is, that the best mode of taking care of them has already been adopted —by reservations. Those who will not go by persuasion, will scarcely remain there if taken by force; and they understand that on the reservation they will have plenty of good and wholesome food, while here they must suffer. I think nothing more can be done, only to keep the door open to such as may from time to time voluntarily wish to remove."

Cave J. Couts, of San Diego county, July 7, 1856, says: "The inhabited portion of this county is infested with two tribes of Indians, known as the San Luisenians and Dieguinos, according to the mission to which they respectively belonged, and number about 2500 each. The San Luisenians exist in the northern part of the county, and, from the coast east, include the principal chain of mountains. These Indians are probably more advanced than any pertaining to your superintendency, and require but little attention with *proper management*. They understand the cultivation of the soil, and are the main dependence of our rancherios for vaqueros. They live comfortably in their rancheros of tule (some few in adobes), on what they gather from their wheat and barley fields, gardens, acorns and *cattle stealing*. Many of them can read and write. The Dieguinos, although reared in an adjoining mission, are far inferior to the San Luisenians. They lack nothing of that laziness and indolence proverbial to all Indian tribes, and live principally by cattle stealing, and on acorns. They are in the southern part of the county, and extend from the coast to the desert, where they naturally blend with the Yumas, with whom they are on very friendly terms."

G. W. Patrick, of Tuolumne county, July 24, 1856, says: "The number of Indians in the county I suppose to be five hundred, entirely, I believe, designated as *Wallas*. The character, condition, and mode of living of these people is the most degraded, destitute, and savage, possible to conceive human beings to exist in. They live in small communities or tribes, better known as rancherias, destitute of clothing, except the old worn-out refuse garments bestowed on them by the whites. They have no houses nor huts, but live in camps covered with brush, and in some instances covered with skins. They are poor hunters, their weapons the bow and arrow, and are too indolent to procure food in that mode; hence they beg, and are frequently seen roving about our towns and villages, asking charity, and picking up the old clothes, in the shape of shirts, hats, boots and shoes thrown away by the miners. They hang around slaughter pens and beg offal, and are often seen wending their way out of town with their baskets loaded with the refuse of the butchers' shops. Late in the spring they migrate, following the melting snow towards the summit of the Sierra Nevada, returning in the fall in time to escape the falling snow. During these excursions they measurably subsist upon acorns, pine nuts upon the pine burr, soap root, grasshoppers, &c., &c. Their condition is the most miserable that it is possible to conceive; their mode of living, the most abject and destitute known to man. I do not see that anything can be done to better their condition in any way, except to locate a farm or reservation, place them upon it, under the charge of competent, humane agents, teach them to cultivate the soil, and to raise a support from the same. They are docile, by no means warlike, and are so low in the scale of human beings, that all that is wanting to make them contented is to better their condition."

[To be continued.]

Merino Sheep.

We deem it a duty we owe to all who feel interested in stock raising, to point out to them every opportunity that occurs which will tend to advance the success of this very important branch of our industrial resources. Sheep raising and wool growing is already assuming an importance that cannot be overlooked.

We have repeatedly spoken of the profits of sheep raising; and the advertisement in our columns, and the reports we have made, are but a part of the facts we could give. But what we could say as to their enormous increase and the profits arising from it, would be so large as to startle the credulity of some of our readers who are faithless as to California ever being anything.

The following facts relative to the flock of superior Merinos imported by Messrs. Whitney & Co., last year, we are at liberty to give. These facts are of such a character as to leave no room for doubt: The above named firm commenced with the landing of one hundred and twenty sheep from Australia: they were thin and sickly when they arrived. In a brief time they were were taken to Sacramento, and a shepherd provided. The number had been reduced by death and sale to ninety six, of which seventy-seven were ewes and nineteen rams. They commenced in April with the above named stock—ninety-six in all—which at the present time amounts to two hundred and twenty-six; being an increase of one hundred and thirty, or equal to one hundred and fifty per cent., in stock, on the seventy-seven ewes.

Although this was but the first year, and the sheep had to become acclimated, yet the lambs produced are improved in size, form and weight, showing this improvement by reason the climate; and in addition to all this, at the shearing of these sheep in May, the amount of wool taken was six hundred pounds, and sold at forty-five cents per pound, or $270 cash. Supposing the sheep to be valued at fifty dollars each, there is a dividend of five per cent. interest, ample to pay the cost of keeping, while the cash value in stock is one hundred and thirty-five per cent., and this the first and trial year.

Can any one doubt longer? We are glad that Messrs. Whitney & Co. have consented to offer some of their valuable sheep for sale, and no person who desires to secure fine stock—those that have been acclimated—should lose a moment in securing them.

The Mines.—A correspondent of the Sierra Citizen in Monte Cristo writes on the 3d instant, that the result of last week's work from the different companies is as follows:

"The Ravine Company took out 102 ounces; the Keystone took out 232 ounces; the Swanton have been repairing their main tunnel, and as a matter of course washed but little pay dirt; Monte Cristo Company in the same fix as the Swanton, although week before last the Monte Cristo Company took out $3,000. The Exchange Company last week took out over 100 ounces; the West Point 'Cadets' took out 170 ounces—the result of Saturday's work was 5 pounds, less fourteen dollars. The Keystone took out on Saturday about 80 ounces. The Bigelow Tunnel is paying well, but don't know the figures.

Goddard & Co.'s Foundery.—This immense laboratory of human industry is in full blast, and when one looks into this vast workshop, and sees the thousand wheels going, it looks like a *great Clock*. We have a story of the "wheel within a wheel," for some future day.

Sacramento City.

A few days spent in our "old home," the city of Sacramento, gave us many pleasant as well as sad memories. Sacramento is undoubtedly as prosperous as any of our cities, her principal streets are occupied by her old standing merchants, and it was pleasant to look in upon old familiar faces again; we were gratified, as we walked up J and K streets, to see the activity that prevailed, notwithstanding the cry that is so frequently uttered, "hard times." We noticed great activity around many business places, and among those most prominent, was the old and well known House of Meeker & Co., corner of K and Third streets; this old and highly esteemed House has been established since '49, and is probably as widely known as any house in California. It was established by S. H. Meeker, Esq., in '49, and continued by him till united with his brother, more recently, and now the House is composed of David Meeker, Mr. Reo and another partner, under the same name of Meeker & Co.; S. H. Meeker being the importing house at San Francisco, and continuing a very extensive trade there. We note also the old house of Hamilton & Howlet, on K street; well known, and established in '49.

On J street, the large houses of Sneath & Arnold, Grissim & Co., Burton, Powers & Culver; Burton & McCarty, Lindley & Co., Cothrim & Co., Hull & Loman, Klopstein & Co., Hill & Co., J.W. Foard & Co., and many others, whose names are as familiar as "household words." At several of these stores we counted four, five, seven and nine teams loading; thus giving an evidence that there was some business, and of importance, too.

The business over the city, though comparatively light, was healthy; no appearance of want of business among the mechanics, as the workmen in the shops appeared busy.

The weather was hot enough, the gardens beautiful and flourishing, the streets shaded by her luxuriant trees, and the city more pleasing than ever. We could not but recall the trials she had passed as a city, and rejoice at her present appearance of prosperity; long may it continue—for in spite of her weather and shortcomings, we love her still.

HOLLOWAY'S OINTMENT AND PILLS.—The brother of His Holiness the Pope, was advised the use of these medicines for a scrofulous eruption of a serious nature. He was completely cured. No skin disease can withstand their influence.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

Do not waste your health and money in purchasing worthless nostrums when there is medicine which will perform all it promises. The Oxygenated Bitters *will cure* any complaint arising from impaired digestion, or debility.

OBITUARY.

"DEATH is but
A kind and gentle servant, who unlocks,
With noiseless hand, life's flower-encircled door,
To show us those we love."

Death makes the following records in the pages of yesterday's history:

Died, in this city, at the residence of her parents, Miss GEORGIE E. L. GIBSON, aged 19 years; only child of Lewis and Almira Gibson.

If parental affection, if watchful care and enduring tenderness, added to a large circle of loving and devoted friends, could have averted the shaft of relentless Death, this lovely and affectionate child would have been spared to return love for love to her now heart-stricken parents, and to have graced and blessed with her pure life and character the wide circle in which she was ever an ornament. But the messenger came; and the young, the beautiful and the gifted has been transplanted to a brighter and better world.

But there is a triumph over Death! The good die not. Their material presence is lost to us only; their lives, always good and pure, come before us, in memory, like bright and beautiful flowers, and the remembrances of their *actions* live, and throw a hallowing influence around us; and as the breath of fragrant flowers is caught by the winds of Heaven, and borne far and wide, so thousands beyond their immediate presence are blessed thereby. Such was the life of the deeply lamented one to whom weeping friends will pay their tribute of affectionate remembrance on the morrow. But kindred and friends have no cause for sorrow. The life of the departed was beautiful; like a zephyr-cloud before the sun, so was her life; clear, pure, transparent, spotless; the morning had but just beamed upon it—and it passed away; there was no noon, no evening; we only remember it was beautiful. The last remembrance of those who were with the departing spirit only recall soft, low, sweet words, whispering prayers, and then, then music—music like that of the evening wind playing on the aolian; and the spirit of the departing one saying to her weeping mother

"Hark! hark! with harps of gold what anthems do they sing.
The radiant clouds have backward rolled, and angels smile the string!
They sing the song that angels sing; they say, come, sister, come!
Another of our own bright band we welcome. Come! come home!"

The music ceased, the voices were hushed, the spirit has gone to Him who gave it, and the clayey tenement only remained, with its weeping friends around it.

☞ **Scrofula and Diseased Blood.**—"DR. GUYSOTT'S Improved Extract of Yellow Dock and Sarsaparilla" is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say, "Try it." It revives the decaying constitution, eradicates all humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine, it has no equal. Its singularly effective action on the blood, its strengthening and vivifying action on the system stands preëminently above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor infused through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of other Sarsaparilla compounds.

☞ Be careful and buy none but QUART BOTTLES. Sold by Druggists generally.

H. H. WARNER & CO., General Agents, and importers for all valuable Patents Medicines, 122 Washington street, San Francisco. v7-22

SPECIAL NOTICES.

☞ **ALAMEDA COUNTY AGRICULTURAL SOCIETY**—The Committee appointed at a primary meeting of the farmers of Alameda County, to draft a Constitution and By-Laws for the organization of an Agricultural Society, having notified the undersigned that they are prepared to submit the result of their labors, notice is hereby given that a meeting will be held at the ESTUDILLO HOUSE, in San Leandro, on SATURDAY EVENING, June 6th, at 7 o'clock, to hear said report and take action thereon.

A general meeting and punctual attendance of farmers and others interested is most respectfully requested.

HENRY SMITH,
Chairman of Primary Meeting.

San Leandro, Alameda County, May 28, 1857. v7-20 2t

☞ **WHAT CHEER HOUSE,**
MAY 27TH, 1857.

CITY AND COUNTY OF SAN FRANCISCO, } ss.
State of California.

KNOW all People by these presents that R. B. WOODWARD, Proprietor of the above named establishmet, hereby announces that from and after this date his scale of prices shall be as following reduced rates to wit:

BOARD, Per Week, SIX DOLLARS.
BOARD, Per Day, ONE DOLLAR.
MEALS, FIFTY CENTS Each.

LODGINGS, Per Night, FIFTY AND SEVENTY-FIVE CTS.

French Patent Spring Beds, with best of Curled Hair Mattresses, Clean Bedding, &c., has gained a lasting and world-wide notoriety for the superior and celebrated Lodgings to be had at the What Cheer House.

In addition to the above, there is also a spacious Reading Room (well supplied with papers from all parts) in connection with the extensive Library of over two thousand volumes of the choicest selection of standard works.

Determined and untiring efforts to please and furnish the very best of fare at the lowest prices, backed up by a rigid adherence to the *cash system*, has made the What Cheer House the best and most popular establishment on the Pacific Coast, for which the public will please to accept the thanks of

R. B. WOODWARD, Proprietor.

Nos. 119 and 121 Sacramento street; and
Nos. 87, 89 and 91 (new addition), Leidesdorff street. v7-20

Fine, beautiful hair—jet black or brown;
Or tresses, curling and golden—
Is the certain result—without chance or doubt—
Of the use of LYON'S KATHAIRON.

The immense sale of **LYON'S KATHAIRON**—nearly 1,000,000 bottles per year—proves its excellence and universal popularity. It restores the Hair after it has fallen out, invigorates and beautifies it—making it soft, curly and glossy—cleanses it from all Scurf and Dandruff, and imparts to it a delightful perfume. The Ladies universally pronounce it the finest and most agreeable article ever used. Sold by all dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.

PARK & WHITE, Wholesale Dealers, San Francisco. 20-1m

☞ **RATS—ROACHES—BED BUGS, &c.**—
The *London Quarterly Review*,
The *New York Daily State Register*, and others on
"COSTAR'S" Rat, Roach, &c., EXTERMINATOR,
"COSTAR'S" Bed Bug EXTERMINATOR,
"COSTAR'S" ELECTRIC POWDER, for Ants, &c.

The London Quarterly Review contains near a column, and the New York Daily State Register, of April 27th, says: "The French Government does not permit rats to be killed in any other manner except by 'Costar's Rat Exterminator,' which is sold (in this city) at No. 388 Broadway;" and again, in issue of May 1st: "No judicious housekeeper should defer purchasing a supply of this invaluable remedy for clearing their houses of all kinds of vermin. With all confidence we can recommend it as an indispensable article for every family."

The New York Journal, for April, has the following: "'Costar's' Remedies for all domestic pests, such as Rats, Cock-Roaches, Bed Bugs, Ants, Fleas, &c., are said to be invaluable; indeed, we can speak from actual knowledge of their rare merits. The name of 'Costar' is a 'household word' to New Yorkers, and his Depot, No. 388 Broadway, is thronged by thousands daily. As the summmer approaches we advise every one who would be rid of the above named pests, to send and procure a timely supply of the *Exterminator*. Druggists and Dealers also should send their orders early if they would secure a trade in articles for which there is a *constant demand*, and on which a fair profit may be realized."

☞ See advertisement in another column. v7-20 3m

☞ **OXYGENATED BITTERS**—*A Sure Cure for Dyspepsia*.—The history of this remarkable medicine, and its astonishing success in obstinate cases of DYSPEPSIA, ASTHMA, AND GENERAL DEBILITY OF THE SYSTEM, places it among the most wonderful discoveries in medical science, and has given it a reputation far beyond any remedy known for these complaints, in all their various forms.

The *Oxygenated Bitters* contain nothing which can intoxicate; and the medicine has no similarity whatever to the various alcoholic mixtures disguised as "Bitters," being purely a medicinal compound, in which are combined the most valuable remedial agents, and a peculiar oxygenated property, hitherto unknown, but highly efficacious in all complaints arising from weakness and derangement, or prostration of the stomach and system generally. It is a mild and agreeable tonic, removing all disagreeable symptoms, and assisting nature in her efforts to restore the impaired powers of the system.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORAILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 20-1m

---

☞ **JOSEPH GILLOTT'S STEEL PENS.**—These popular Pens are to be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Thirty years' experience in the manufacture will, it is hoped, be a sufficient guarantee that every effort will be made to maintain the reputation of these articles. Those of *Standard Quality*, only, are allowed to issue from the Manufactory.

Each box contains a warrant, bearing a *fac simile* of Joseph Gillott's signature.

Manufacturer's Warehouse,
91 John street, New York.

HENRY OWEN, Agent. v7-15 3m

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

If a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to form a class.

A note addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

---

☞ **BEAUTIFUL GIFT.**—One of the most beautiful Gifts of the season will be found in the superb work which can be seen at our Offices, 130 Washington street; and on Fourth street, Sacramento.

FLORA'S DICTIONARY.
BY MRS. E. W. WIRT, OF VIRGINIA.

For particulars of the work see the Card of Messrs. Lucas, of Baltimore, who have sent us copies for sale.

WARREN & CO.,
State Agricultural Society's Rooms, Sacramento;
v6-21 tf And 130 Washington street, San Francisco.

☞ **TO STOCK RAISERS.**—We earnestly invite stock raisers of all kinds to advise with us and give us information in regard to such stock as they may have for sale, and all the particulars of price, quality, &c. We are often inquired of relative to such matters, and can always find purchasers for almost all kinds of extra stock. Valuable stock will always sell; and we intend to keep a register of all such stock as may be in market, and assist in finding purchasers for it, and to do everything in our power to further the breeding of good stock.

Splendid Merino Stock.

THE value of MERINO SHEEP, and all fine wool-producing Sheep, is beginning to be appreciated; and, from the experiments already made, it has been ascertained beyond a doubt, that Sheep raising will prove one of the most important branches of domestic industry on our coast, as well as the most profitable. The finest grades of Sheep are easiest cared for; the most productive, and pay the best, as fleeces of the common breed of Mexican Sheep produce 2, 2½ or 3 pounds, and sell at from 12½c. to 18c. per pound; while the finer Sheep yield 4, 6, 8 and 10 pounds each, and often more, if clean washed, which sells more readily and commands 40c., 45c. and 75c., thus far outstripping, in value and productiveness, all other kinds, and all idea of raising hereafter the common breeds of Sheep.

The undersigned having fully tried the experiment and proved the above, and having a few very fine Merino Sheep for sale, now offer some fine Bucks and Ewes from the flock that have verified the above facts, as the increased character of the Sheep and Wool produced the past year will prove.

Persons wishing to purchase of this kind of Sheep, can learn all the particulars and price, by addressing the undersigned either at Sacramento (where the Sheep can be seen), or at San Francisco.

GEO O. WHITNEY & CO.,
115 and 117 California street, San Francisco;
Corner K and Fourth streets, Sacramento.

P. S.—Reference for the above important facts may be made to the EDITOR of the FARMER. v7-22 3m

Ladies' Department.

TO A——Y.

[The following strain of poesy will be ranked among the gems of poetical lore of our Golden State, and well may be classed with some of the finest strains of an Hemans, a Sigourney, or a Davidson; there is also that easy and graceful flow which makes the poetry of Amelia so very beautiful:]

'Tis past, 'tis past, the dream is o'er,
I know it can return no more;
Oh! wounded heart! what words may tell
Thine agony at this farewell?
Yet oh! I must each thought control,
Must nerve 'gainst all, my wayward soul,
That *he* may never—never know—
My spirit gave this last fond throe.
Yet why, comes this unbidden tear—
Like that which flowed when he was near;
And why will his deep passioned tone
Still sway my heart, e'en now his own?
Ah! would he had not lightly cast
My soul's deep feelings to the blast—
They were the first—aye, fond and true,
The purest love a heart e'er knew.
The past comes back, and round me flings
Its haunting whispers yet. It clings
Around my heart, which worships these
Too sad, too mourning memories:
'Tis not reproaches that I breathe,
There is no broken vow to wreathe
Its haunting voice, at midnight's gloom,
Round thee—to make thine own dark doom.
Yet in thy kind and gentle smile,
Mistaken by my heart, the while
I dreamed that I possessed thy love—
For which, I'd have given the sky above.
But now from out my heart I tear
The idol, it so worshiped there;
All memories of love's young dream
Shall perish in the Lethean stream.
Another in thy soul is loved—
Oh! may she prove as I'd have proved.
But oh! that wish is all in vain,
Ne'er can'st thou on this earth again
Be worshiped, as by me thou art.
Love *her*—aye, love her in thy heart;
Her image on life's altar set,
But teach ME how I can FORGET.

FLORENCE PERCEY.

CARRIE.—ANOTHER LOVE STORY.

BY THE AUTHOR OF ——, &C.

"To paint that being to a groveling mind
Were like portraying pictures to the blind."
[THEODRIC.

In a lonely room in the city of Sacramento, a lady knelt and prayed. Yes, gentle reader, as early as 1852, there was *one* heartfelt prayer ascended to heaven from the gold-polluted soil of California. She prayed for fortitude in a holy undertaking, in which she had enlisted her happiness and her life. She asked the God of Mercy to crown her efforts with success; but it would be a sacrilege for one so profane as I, to repeat one word of that prayer. As the lip of the petitioner ceased to move, she felt that she had not bowed her knee in vain—she had faith; and who that has faith can fail of success?

"I must put on this disguise once more," she said, "and go this evening to the slaughter-house of human souls, and see how how far he has sunk down into the bottomless pit. Oh! that he has not sunk so far that these cannot reach him. But were he a thousand fathoms lower than Satan himself, I could contemplate the awful abyss without growing dizzy; my heart would not fail me—I would make the attempt. He must and shall be saved."

So saying, she dressed herself in male attire, placed a huge pair of whiskers on her chin, and a mustache on her lip, then taking a rattan cane in her hand she stepped into the street and directed her course to the most fashionable saloon on J street.

But while she is walking slowly along, meditating on the world, and its ways, we will step into the saloon and see what is going on there:

The first thing that attracts our attention as we step in, is a band of music on a platform, elevated some eight or ten feet above the floor. On our right is a man turning a wheel with a marble on it; and around the table are numberless simpletons, eager to bet him a few ounces, that the marble will fall into some particular-numbered notch or pocket in the wheel; this game is called *roulette*. Near this table sits a man playing at thimblerig, the oldest cheating game in the world, yet there are found plenty of fools ready to bet that they can guess where the ball is. On our left and near the door is a man bawling out: "The ace is the winning card; who bets on the ace? the ace, ace, ACE? who *bets* on the ace? Any man can win sixteen ounces if he will turn up the ace." Our curiosity leads us near this table.

As we approach, a man comes to us all full of excitement, and tells us that there is the best chance in the world to make sixteen ounces; that if we will just furnish him with the money, he will win it *sure*, and give us half. We get a sight at the table and find that a man has three cards in his hand which he keeps showing; one of them being "the ace." After showing you that the "ace" is there, he throws them down in so dexterous a manner that we don't know which is "the winning card;" but our "excited" friend shows us that the ace is *marked*—the corner is turned up. This looks very much like the "dead wood" on sixteen ounces. Now we will suppose that we left our *brains* behind, and brought our *purse* along; and we give our excited *friend* the required sixteen ounces: he bets it, and turns up the — jack. "By ——," says he, "I missed it that time; but never mind, we'll make it up yet." This game is *French monte*, and our "excited friend" is what is called a "cap-er." All games have "cap-ers."

Gambling generally arises from avarice; and the jingle of money that here greets the ear, makes an avaricious man loose all command of his reason. He bets, loses, and then tries to get "even."

There are so many games going on in this saloon, that we can't notice them all this visit; but here is a table that there is no one betting at just now. There is a man sitting behind it, and a *woman* leaning against him with her arms round his neck. This man had married a beautiful and accomplished young lady in the spring of '49, and started the same day for California; and was to return in three years; but his three years were out, and he had not even written to his wife for over a year. His last letter read as follows:

Carrie: You never need expect to see me again. I am a *drunken* sot; a thieving gambler. I have no conscience: I could rob a sick child. The devil has bought me, body and soul; there is no possibility of an escape. Go to work and get a divorce, for I expect to die on the gallows, or in a dungeon. Forget me. I never expect to think of you again—I'll drown you in whisky. You can never understand *how* such a change was brought about, therefore bother not your head about it. Yours (over the left), O— C—.

His wife wrote him several kind and affectionate letters in reply, but he read them not. After waiting for several months in the hope of again hearing from him, she started for California, and had been here several weeks before she found her husband. She did not think it best to let him know her then; hence her disguise; for our lady that we have just left coming down the street is this man's wife.

She entered the house, saw that there was no one round his table, but this woman, and walked up to him and asked him how much he would give her for that ring, handing him one.

He took it and looked at it a moment, and then turned pale and red by turns. At length he said: "Where did you get this ring." "I had it of a lady," said Carrie, inwardly rejoiced to see that he knew it.

"O! buy it for me?" said the woman at his side. "It is such a nice one."

"Go to the devil," said the gambler, pushing her off; "this ring was once worn by an angel; and it shall never be polluted by your touch. Here, sit here till I come back. Young man, let's take a walk."

They walked in silence up the street and soon went up an out-door stairway, and entered an apartment, furnished with everything that money could procure. The gambler lighted a candle (for it was evening), and motioned Carrie to a seat.

"Now," said he, drawing a chair up alongside, "tell me about that ring?"

"Well," said Carrie, "it belonged to a Mrs. C., who I got acquainted with some year or so ago; and when I started for California she requested me to take this ring and give it to her husband. It was the talk round, that you had deserted your wife, but —"

"How the d—l did you know that I was her husband?"

"By her description. But as I was saying, she denied all the while that you had ever thought of such a thing. As I was going to start, however, she told me the whole truth and made me swear to befriend you whenever you needed my friendship. And she also said that if you remembered this ring, to give you this letter."

"I cannot read a letter from Carrie," he said; "it would be too much like the devil reading scripture; but give it to me, I will read."

He took the letter, read it, and said: "She is an angel; by *heaven* she is an angel. She says that she understands how a man may be led into bad company and then into bad habits; and that she can forgive and forget all—everything. There is not another woman in the world like her; but I can never see her: no *no* NO! I *cannot* and *will not* see her!"

"Suppose," said Carrie, "that she should come to you?"

"Before she should see me degraded as I am," said C——, "I would kill both her and myself; for I am bound to go to hell, and I don't care how soon I go; and heaven will claim *her* anyhow."

"Will you," said Carrie, "accept of my friendship? I wish to live near you, or if you please I will room with you what time I stay in the city. Perhaps it would cheer you up to talk sometimes of home scenes."

"I will tell you to-morrow," he said. "Meet me here at ten in the morning; but I must go see what is going on down in bedlam."

"I have another proposition," said Carrie, "for you to study till to-morrow."

"Let's hear it?"

"I have some ten thousand dollars with me, and I wish to go into some kind of business. I want a partner, and would rather have you than any one else. So if you are willing to go in company with me, you may choose the business, *place*, and *terms*."

"Young man!" said the gambler, grasping Carrie's hand; "young man, you know not that you are speaking to a thief, a robber, a sot, a nobody, a man sunk lower in the scale of humanity than the Digger. I have robbed, without remorse, the hard-working miner of his last dime. I have got men to gambling when I have known the money I was taking did not belong to them. I have known when men were going to commit highway robbery, and tried not to prevent it. I have never murdered a man, but it would not hurt my conscience to do it; for I have none. I don't need to do it, is all the reason I never did. This, sir, this is the kind of a man that you propose a partnership with."

"And I propose it again," said Carrie. "Say that you will give me an answer to-morrow, and I will detain you no longer."

"I will," said the gambler, and they separated.

Carrie's bosom, when she parted from her husband, was agitated with the contending emotions of joy and grief, of pleasure and of pain, of ecstacy and sadness. He loved her madly, and devotedly, and she believed that she would yet save him; yet it pained her heart to see the state he was in. She had seen him that evening dealing monte, with a lewd woman hanging round his neck. Ladies! was not that a bitter pill? But she was disposed to forgive all things. Resentment and anger could find no harbor in a heart so pure.

That she was in the street, she knew; but where she was going, she knew not, and cared not. But soon she heard a noise, and on looking round she found it was in the gambling saloon. On going to the door she found that her husband was quarreling with another gambler. It appeared that while he was gone, the woman, who had got mad because she did not get the ring, had taken the money of the "bank" and gone and joined another gambler, and this gambler now refused to restore it. Just as Carrie had got into the house, they both drew pistols and began firing at each other. This caused the crowd to rush out, and it carried her with it.

As soon as she could free herself she rushed back into the house, and found her husband lying on the floor, bleeding—the other man gone. The crowd gathered round again, and it was some time before she could make her way out with her husband, although she was assisted by several gentlemen. At the door they were met by a doctor, who examined the wound, and said that it was dangerous, and that he would require the best of attention if he got well.

Carrie had him taken to her room, and kept watch with the Doctor all night. In the morning she told the Doctor who she was, and asked him if it would not be better to make herself known, as she thought it would do him more good to know that he was nursed by his wife; but the Doctor thought otherwise.

For three weeks he lay as helpless as a child, during which time Carrie was never more than an hour from his side, and that would be when he was asleep; so that he never saw her chair vacant. He would talk to her about his wife, and ask her if she thought she could ever forgive him?

She would tell him that his wife was all forgiveness, and would come to see him by the time he could walk about. We can imagine what a hard task it must have been to her to sit by his bedside for weeks and remain unknown.

In about a month he got so that he could sit up very well, and the Doctor told Carrie that she might then make herself known if she chose. So she went into his room and began to talk to him about his wife; she asked him if he would like to see her? He said that if he thought she could forgive him from the bottom of her heart, that he would like to see her.

"She is in this house," said Carrie, "and she says that she never did feel angry at you."

"Do you say that she is in the house?" said he, raising himself; "oh! let me go to her; I can't wait a minute longer. Where is she? I must and will see her."

"Wait ten minutes," said Carrie, "and you shall see her. I'll go and send her in." So saying she left the room, but it was not more than five minutes before she was back again, dressed in her wedding clothes.

He raised in the bed—she threw her arms round his neck, and for the first time since she had been in California, she gave way to tears.

"Oh! Carrie," he said, "do you know how mean I have been, and do you forgive me in reality?"

"I have never harbored any feeling towards you but love; and anxiety," said Carrie.

"I have always said that you was an angel, and now I know it; you are not human; no, there is no human nature about you. But what did you do with my young friend, that waited on me so closely since I've been sick. Don't get jealous now; but I loved that young fellow with all my heart. I wonder where he is?"

"Here," said Carrie.

"Where?"

"Here, sitting by your bed; I have been with you for the last month. It was I that gave you the ring, and it was I that have been your nurse. Now it is my time to ask your pardon for having *deceived* you."

"Carrie," said he, after a moment's reflection; "Carrie, I am glad that I have been a gambler, for if not, I never should have known but my wife was a *woman*. But now I know that she is not a woman; she is an angel. I always said so, and thought that I thought it, but then I thought that all men said the same of their wives; but now Carrie, now, I know that you were not made of common clay—the *dirt* that you were made of was about two thirds diamonds. What say you?"

"Me, why I say you are joking; but I say that I love you, and that we will be happy all the rest of our lives."

Reader, I need go no further. Suffice it to say, that they are happy. But would they have been happy if Carrie had not had courage, love, and fortitude?

A POSER.—A calm, blue-eyed, self-composed and self-possessed young lady in a village "down east," received a long call the other day from a prying old spinster, who, after prolonging her stay beyond even her own conception of the young lady's endurance, came to the main question which had brought her thither; "I've been asked a good many times if you was engaged to Dr. C——. Now, if folks inquire again whether you be or not, what shall I tell 'em I *think*?" "Tell them," answered the young lady, fixing her calm blue eyes in unblushing steadiness upon the inquisitive features of her interrogator, "tell them that you *think* you don't know, and you are *sure* it is none of your business."

"I like to see the dear little creatures amuse themselves," said Mrs. Brown, when her oldest boy took a visitor's new bonnet and affixed it to the tail of his kite. "Never fear," said the good lady to the visitor, when she saw her bonnet in the air, "as soon as the kite comes down he will give it back to you."

Regard for the Marriage Vow.

Well would it be for our country if the parents of the present day would all have the same regard to the welfare of their children, that the noble Earl of Southampton had for those he sent to the people of Virginia, two hundred years ago. How the times have degenerated, for at the present day parents care less for the happiness of children than the case we refer to:

Early Times.—The following remnant of the early times when women were willing to get married, and not ashamed to own it, is a letter accompanying a shipment of marriageable ladies, made from England to the colony in Virginia. It is dated—

"London, August 21, 1651. We send you a shipment; one widow, eleven maids, for wives of the people of Virginia; there hath been especial care had in the choice of them, for there hath not one of them been received but upon good recommendations.

"In case they cannot be presently married, we desire that they may be put with several householders that have wives, until they can be provided with husbands. There are nearly fifty more that are shortly to come, and are sent by our Hon. Lord and Treasurer, the Earl of Southampton, and certain worthy gentlemen, who, taking into consideration that the plantation can never flourish till families be planted, and the respect of wives and children for their people on the soil, therefore having given this fair beginning; reimbursing of whose charges it is ordered that every man that marries them, give one hundred and twenty pounds of best leaf tobacco for each of them.

"We desire that the marriage be free, according to nature, and we would not have those maids deceived and marry to servants; but only to such freemen or tenants as have means to maintain them. We pray you, therefore, to be fathers of them in this business, not enforcing them to marry against their wills."

To Young Ladies.

Young maiden, who hast merely gone botanizing into the land of romance, and there picked up thy knowledge of men and the world; who on thy entrance into society anticipates with a fearful pleasure, that the men will busy themselves about thee, either as the butterfly about the rose, or the spider about the fly—a word to thee. Be at rest; the world is not fearful. The men have too much to do with themselves. Thou wilt have to experience that they will inquire no more after thee than after the moon, and sometimes even less. Thou armest thyself, thou of seventeen years, to resist the storm of life; ah! thou wilt probably come to have more to do with its inaction. But let not thy courage fail, there are life and love in the world in the richest abundance, not often in the form of which they for the most part are exhibited in romances. The romancer distils life; he makes a day out of ten years, and out of a hundred grains of corn draws one drop of spirit; it is in his trade. The reality proceeds in another manner. Rarely come the great events, the powerful scenes of passion. They belong, in every day life, not to the rule, but the exceptions. On that account thou good creature! sit not and wait, or thou wilt suffer tedium. Seek not the affluence of life without thee; create it in thy own bosom. Love heaven, nature, wisdom, all that is good around thee, and thy life will become rich, the sails of its air-ship will fill with the fresh wind and so gradually soar up the native regions of light and love.—[Miss Bremer.

PHALON'S

CHEMICAL HAIR INVIGORATOR.
The most complete article of the kind ever before offered to the public. It has stood the test of twenty years in this county, and not one of the many hundreds of imitations have been able to compete with it for preserving, dressing, and beautifying the hair, and keeping the head clear from dandruff, &c. It is inestimable; in short it is everything the hair requires. Price, 50 cents and $1.

PHALON'S PAPHIAN LOTION, OR FLORAL BEAUTIFIER.
A great cosmetic for beautifying the skin and complexion, and for curing chapped hands, face, lips, tan, sunburn, freckles, pimples, scalds, burns, &c. A sure and safe cure for the piles—one washing will give instant relief. After shaving, it is very soothing to the skin. It keeps the hands soft and white, and for inflammations of the skin it will be found to be a great remedy. Price, One Dollar per bottle. Made and sold by E. PHALON.

PHALON'S MAGIC HAIR DYE.
One of the very best natural dyes in the world. Its long use has proved it to be beyond comparison; and being a vegetable production, no injury can possibly be done to the skin. It is easily applied, and you can obtain a black or a brown which will defy the best judges to tell it from nature itself. Price $1 and $1 50 per box. Made and sold by E. PHALON, at 197 Broadway, corner of Dey street, and 517 Broadway, St. Nicholas Hotel, New York, and all Druggists and Fancy Stores throughout the United States.

Ho! There, Everybody! Face the Music and Read!

Is you have business of any kind to transact, is it not important that you should endeavor to get as near as possible to where business of all kinds is known to center?
Do you wish to patronize a house conducted on strictly temperance principles?
Do you want to stop at an establishment favorably known throughout California, Oregon, and all other places, for its moderate charges, good tables and best of beds, together with order, comfort, convenience, and superior accommodations?
If you desire all these, we advise you to go to

WOODWARD'S

87, 89 and 91 Leidesdorff street---119 and 121 Sacramento street.

This establishment is centrally located in the principal business part of the city, and in the immediate vicinity of the Steamship Company's Office, the Express Companies Offices, and the United States Branch Mint.
BOARD, per Week, $6. BOARD, per Day, $1. MEALS, 50 cts. LODGINGS, 50 to 75 cts. per Night.

☞ Single Rooms, furnished complete, 75 cents per Night.
☞ Rooms or Lodgings can be had by the Night or Week, with or without board, to suit the convenience of all.
The Beds are fitted up in the very best style, with patent French springs, and the best of curled hair mattresses, clean bedding, &c.

☞ BATHS FREE! ☜

By unremitting attention and untiring efforts to furnish the greatest amount of comfort and convenience at extremely low prices, the proprietor hopes to merit a continuance of the increasing patronage that the What Cheer House at present enjoys.
For the accommodation of miners and others having money or valuables, there are two large safes in the office.
There is an extensive Library and Reading Room, well supplied with papers, periodicals, &c.

THE HOUSE IS OPEN ALL NIGHT.

☞ Travelers will please to remember that there are no "Runners" connected with this establishment.
The What Cheer House is conducted on strictly temperance principles.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.
Rooms, cor. Sacramento and Montgomery streets,
SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

J.L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.
Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valuable articles:
Budds' Nerve and Bone Liniment, warranted the best in California.
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

Agricultural Warehouse.

v7-7 Fourth street, Sacramento

Educate the People.

THE greatest danger to which our glorious institutions have been exposed, in times past, has arisen from ignorance, prejudice and superstition; and the one great bulwark of liberty, the ballot box, has been so often polluted by reason of ignorance, that we rejoice to see the dawn of a better day arising which shall dispel all danger. We have always advocated the following rule, which has now been so triumphantly adopted in Massachusetts, and enrolled upon her Constitution, by a vote of the people, that a voter should be able to *read and write* to be a qualified voter.

The Constitution of the State of Massachusetts has been amended in several important particulars, and the vote was submitted to the people on the first of May last. The first question was the one named, requiring that every voter in the State should be able to read and write the English language. This amendment commended itself to the people, and was adopted by large majorities in all the counties, although opposed bitterly by the ignorant and illiterate. Every intelligent mind must look upon this action of a people with pride, and every son of New England will feel a thrill of joy, for he will remember that "old Massachusetts" provides amply for the education of her sons and daughters. She insists that they should be intelligent, that they may be worthy of their native State, and labor for her advancement, whether at home or abroad; and Massachusetts intends that those who enjoy the blessings of her institutions and share in her government, and live under the protection of her laws, shall be intelligent.

We sincerely trust her noble example will soon be widely imitated; then will the "purity of the ballot box" be guarded, and our institutions freed from the danger that now threatens to subvert them.

MARBLE YARDS AT SACRAMENTO—CALIFORNIA ALABASTER.—On our visit to Sacramento we took opportunity to visit the marble yards of some of the excellent artists of that city. We called on J. P. Divine, on K street, who is preparing some most beautiful work—mantels, grave stones, obelisks, &c. His style of work does him great credit. His sculpturings of flowers are honorable imitations of nature. Mr. Divine won the premium at the San José fair last year. We also called on Mr. Luce, who has also very fine work. Both Mr. Luce and Mr. Divine will prepare work for the State Fair at Stockton, and also for the Mechanics' Fair at San Francisco. Mr. Luce presented us with a fine specimen of California Alabaster, found some thirty-five miles up the American river. The specimen had been highly polished. This discovery will prove a great acquisition to the State. Mr. L. also showed us another specimen; a species of marble, but of so hard a character as to be almost beyond the power of working with the chisel. It was finely marked with veins. Thus, day after day, new and valuable discoverics are made, which must add to the wealth of our State.

FROM HONEY LAKE VALLEY.—An arrival from Honey Lake Valley, by way of Noble's Pass, is reported by the Shasta Courier. The parties, Messrs. J. M. Gilpin and Robert Strickland, came in with ox-teams, and reached that place on Wednesday last. They give a glowing description of the many advantages of this route over all others now traveled, and cite many facts in proof. They say:

There are at this time about fifty ranches taken up in the Valley, the owners of which, together with their employés and other citizens, number about one hundred souls. The population is being added to almost every day.

None of the ranchmen made any hay last summer, and hence their cattle were left to shift for themselves during the winter. The grass in the Valley, however, is of a superior quality—strong and nourishing—so much so, that the cattle which were turned out poor in the fall, are now fit for the butcher's stall.

These gentlemen saw no Indians going or coming. They observed one *track*, which they shot into with a rifle ball, for good luck. The Piyute Indians, of the Valley, are quite friendly, and are now engaged on the east side of the Lake, taking that glorious fish, the salmon trout, which there abound in immense quantities.

It is believed that "paying" gold mines will be found in the Valley. Already two of the boys, who went out with Messrs. Gilpin and Roop, have found gold on Lassen's Creek. In three days they took out three dollars per day each.

A NEW PLAN FOR PROSPECTING.—The Nevada Journal contains the following suggestions, which if they are as practicable as they are novel, are certainly worthy of attentive consideration. Perhaps the same plan could be advantageously adopted in other portions of the mining district. Here is the plan proposed:

The experience of miners in this locality during the last five years, gives us the fullest assurance, that millions of dollars of gold are buried in the mountain ridges in our immediate vicinity. But it requires an outlay of capital to reach these leads, which small companies, or a single individual dare not venture, while success seems a mere chance, and failure certain bankruptcy. The requisite outlay, however, may be easily furnished by a company of the size proposed in another column (one hundred or more), and should the prospecting by such a company prove a failure, no one would be broken or embarrassed; while on the other hand, the discovery of a rich lead would open a new field for industry, attract many customers for our merchants, again throng our streets and restore wonted animation to our city. The company proposed, is intended only as a *Prospecting* Company, and will leave the working of the claims when the lead is struck.

LUCKY MINERS.—Three brothers, named Miller, left Alleghanytown, Sierra county, in time to take passage on the last ocean steamer, with $20,000, the result of one year's labor in that vicinity. So says the Forest City Democrat.

Rassette House,
Corner of Sansome and Bush streets, San Francisco, Cal.
FAMILIES accommodated with suites of rooms—boarders by the day, week or month, with or without rooms, at low prices. The "Rassette Coach" will call at all the steamers and convey passengers (baggage free) for One Dollar.
JOSEPH RASSETTE,
v6-1 Proprietor.

Hayward's Hotel,
Five Miles from San Leandro, near the Castro Ranch.
THE Proprietor of the above Hotel takes pleasure in calling the attention of his patrons to his house at the present time. Having taken some pains to newly finish and furnish his house and prepare it for the traveling public, he feels confident he can offer a pleasant and comfortable "home" for the traveler, or for any one that wishes to spend the summer season in one of the finest valleys of the State.
The location is one of the most healthy and delightful spots in Alameda county. Situated upon a commanding eminence, it presents a magnificent view of one of the most beautiful and highly cultivated valleys of California, and opens the prospect to the bay and harbor of San Francisco, and the country around for many leagues.
The Proprietor has spared no pains or expense to fit and furnish his rooms in a style having reference to neatness and cleanliness and comfort. These he feels confident will be approved; and every effort will be made to have the table and every other department subserve the pleasure of his patrons.
A good Stable is attached to the house. Horses in saddle or harness can be furnished for the pleasantest road scenes in the country—the Springs, the Mission Gardens, the Fishing Grounds, and other places, furnishing abundant sources of amusement for the benefit of invalids or persons desiring recreation and pleasure.
☞ The patronage of the public is solicited. v7-18 3m

Estudillo House,
SAN LEANDRO, Alameda County.
THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.
To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.
San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.
The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.
v7-13 A. R. BIGGS & CO.

Antelope Restaurant,
Nos. 74 and 76 J street, Sacramento.
THE Proprietors of the above named Restaurant offer it to their friends and patrons as a *first class restaurant*, perfect in all its appointments, with Lodgings attached.
The Proprietors hope, by strict attention to business, to give satisfaction to all who may favor them with their patronage.
J. D. Treat. [7-83m] Charles Brooks.

OY'S FINE OY'S.
THE luxury of a good "Oyster"—a genuine "Cove Oyster;" one of your Baltimore or New Yorker's (the very thought of which makes one's mouth water)—can always be found by those who can appreciate them, either in the Shell, Broiled Fried or Stewed, and in true epicurean style, at "DAN'S OYSTER SALOON;" and with this appetizer, before or after, every other dish of dainties, such as those who appreciate good things can always find at DAN'S OYSTER SALOON,
v7-14 Montgomery street, bet. Commercial and Clay, San Francisco.

☞ A GIFT BOOK FOR ALL SEASONS. ☜

BOOKS, &c.

Just Published.
THE GRAMMAR OF ENGLISH GRAMARS,
BY GOULD BROWN,
Author of "The Institutes of English Grammar," &c., &c.
Second Edition—Revised and Improved.
With Portrait of the Author.
"It leaves far, very far behind it, everything which has hitherto appeared under the denomination of an English Grammar. * * * It is in the amazing extent and compass of the 'critical style'—the topics, definitions, rules and illustrations; in the acute investigation which is everywhere displayed; and in the minuteness and perfect finish with which every particular is wrought up, that the distinguishing features of the work most manifestly appear. * * * We see, as the result of all that has been done by our author, a noble and most important book—ample, critical and symmetrical in a high degree—and, what is a most remarkable feature, an original work—the work of one head and one pen."—[The District School Journal of Education.
"We have carefully examined its pages, and feel bound to acknowledge it a standard work—settling numerous and vexatious disputes among teachers and scholars, and rendering plain and interesting what has heretofore appeared difficult and uninviting, and even unprofitable to those who aimed at certainty."—[The American Artisan.
V. M. Rice, late Superintendent of Public Instruction for the State of New York, in a recent letter, speaking of the author of this work, says: "I know of no man to whom this country is more indebted for a correct knowledge of our language than to him."
Also, recently Published, Revised Editions of
Brown's First Lines of English Grammar,
For Young Learners.
Brown's Institutes of Grammar,
For the Higher Classes.
Samuel U. Berrian, of Rye, School Commissioner for the Second District of Westchester county, N. Y., says:
"The definitions and rules are rigidly exact, the paradigms neatly arranged, and the formulas explicit and easy of enunciation. *Method* is a marked feature of the book [First Lines]; and as to its didactics, whatever is said, is said in the fewest words possible: principle is never found clashing with principle; there is a due sequence in the parts; and all goes to make up a harmonious whole.
"Brown's Grammars are of a class *never to die*. At present of unapproachable excellence, and the highest possible authority, we doubt if they can ever be superseded, at least while our language remains what it is. The 'Institutes,' the author's intermediate, or academic Grammar, comes forth now also rejuvenated, elaborately polished, and beautiful in its exterior. We call the attention of teachers and private learners to this work, especially of those teachers who have the conduct of higher schools."
"Brown's 'First Lines,' and his 'Institutes of English Grammar,' in their original forms, were the best Grammars we ever met; and their improvements, they justly command the good will of teachers."—[Massachusetts Teacher.

THE LAW OF NEWSPAPERS.
1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facie evidence of intentional fraud.
☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.
Postage of the Farmer.—The Postage of the FARMER to any part of the State is only 6½ *cents per quarter, or 26 cents per year.* This is the lawful postage established by Congress and when more is exacted it is a violation of law

MEDICINES, &c.

SANDS' SARSAPARILLA,
FOR PURIFYING THE BLOOD,
AND FOR THE CURE OF
Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the STOMACH, the CIRCULATION, and the BOWELS, and thus three processes, which are ordinarily the result of THREE different kinds of medicine, are carried on at the same time through the instrumentality of THIS ONE remedial agent. Its great merit is, that it meets and NEUTRALIZES the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.
LYNN COUNTY, Oregon Ter., March 11, 1856.
Messrs. A. B. & D. SANDS, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 24 of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. Thus encouraged, I purchased a third bottle; while taking it, the swellings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor, as all our neighbors will certify.
Yours, respectfully,
CALEB DAVIS.
Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; R. H. MCDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,
FOR INFLAMED EYE-LIDS.
The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.
READ THE FOLLOWING EVIDENCE.
NEW YORK, July 15, 1856.
Messrs. A. B. & D. SANDS: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your ROMAN EYE BALSAM, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflammation, which had not been the case before for many years.
Yours, &c.
G. B. WILLIAMS, 262 BROADWAY.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.
Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity of the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots or Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.
The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.
It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparation extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

LETTERS FROM ROVING JACK.

NO. 2, NEW SERIES.

NAPA CITY, June 10, 1857.

DEAR FARMER: When men seat themselves, pen in hand, for the purpose of composing a newspaper article, all will admit that they have an object, yes, often many objects—some write for the purpose of getting their names in the prints; others write for the purpose of making a display of their talents, and some write that their names may be handed down to posterity; and again some write because they have nothing else to do. Of the latter class there are many; their name is legion, among whom your humble servant occupies a prominent position. Yes sir, this morning I have nothing to do, that is, comparatively speaking, and upon glancing over the columns of your valuable sheet, I see but few names that I could recognize as being among those who in time past formed your list of correspondents. I see our mutual friend Agricola, is still at his post advocating the cause of the tiller of the soil, with that perseverance peculiar to himself. Well may you be proud of such an able correspondent; and the toiling clodhopper should rejoice that California is graced with such an untiring advocate of the Agricultural interest; one, whose learning has obtained for him a just celebrity. May the farmer, the stock-raiser, and the pomologist profit by his timely and sound instructions. With this exception, I find none of my quondam friends. What has become of them? Have they gone the way of all the earth, or have they, like Roving Jack, become negligent, and ceased to correspond upon that ground? This is not as it should be. All should endeavor to put in their mite in aid of the great work. My only reason for stopping was simply because I did not consider my articles by any means edifying; never having made Agriculture a study, and I have not made farming my profession altogether; hence I have not hoarded away a great fund of agricultural knowledge, obtained from the school of experience, or otherwise. But that the farmer's profession is respectable, I think none will pretend to deny; that it is an independent one, we daily have practical illustrations of that fact. From the haughty king upon his throne, to the degraded beggar in our streets, all, all, are dependent upon the industrious tiller of the soil for a support. Now, if this farming interest is one of such vital importance, why is it not receiving more attention? Yes, more respect? Why do people hesitate to pay a pitiful sum in its support? Why do men in high positions steal the brains and substance of the few advocates of this great interest?

Now perhaps all will plead not guilty to the above charges. But stop, before a verdict is rendered in this case; let's hear the testimony, and, dear reader, for the purposes of this action we will insist upon your taking the stand. After you are sworn, we ask, do you take an agricultural paper? You answer, yes, I am reading one now. Do you pay for it? O no, but I intend to, when I get a surplus five. How long have you taken it? Well, it has been coming to my address for near two years. Have you had ten dollars during that time? O yes, often; but there are many things that I am compelled to buy that I cannot get on credit, and, moreover, the editor is a good, clever fellow, can write as well as not, and, if everybody else pays up, he can't miss my little mite much. Do you drink? Yes, a little. Do you go to the theatre, circus, &c.? Of course I do, and to fashionable balls. If I did not, I should be thought a miser—a Shylock. How much do you think you spend during the year for such amusements? Well, I should say, perhaps, for liquor and amusements, not to be extravagant, about one hundred dollars. Do you think the paper you are reading worth the sum of five dollars? O yes, I would not be without it for twenty dollars. One further question, and I am through with you. Do you think the liquor and the amusements were worth the money you paid? I don't think the liquor profited me much. The amusements were a little overrated, and, to take everything into consideration, I was not very well satisfied with my bargain. Well, sir, I am going to pass sentence on you, and after I do it, you will not deny but that the sentence is in accordance with the verdict of guilty, which verdict, by your own testimony, should be rendered against you. Sir, you are guilty of grand larceny. You have, according to your own testimony, robbed yourself of one hundred dollars. You are guilty of petit larceny and swindling. You have taken a paper, that, according to your own admission, is worth four times as much as you agreed to pay for it; and you have failed to pay that amount, and in doing so you have committed the crime of petit larceny upon the brains of an editor—the property of the people of the State of California. For all of which, you are sentenced to do without whisky and all spirituous liquors for the space of twelve months, until you pay up. Now don't let me hear of your going on a "bender" any more until you fork over.

ROVING JACK.

Letter from Stanislaus.

MESSRS. EDITORS: I herewith send you the first melon of the season, *in these parts*, although San Francisco may be as far in advance of us back-woods folk in melons as she is in everything else; and if such is the case, my melon will be no rarity to you. "Straws show the way the wind blows," and I send you this trifle, gentlemen, to try to prove to you that I appreciate your untiring, and I may add, successful endeavors to promote, not only the agricultural, but every interest of California. Believe me, gentlemen, when I say I think this State owes you a large debt: perhaps it owes you "dimes and dollars," but the debt to which I allude is one of thanks and gratitude. "The laborer is worthy of his hire," therefore I sincerely wish you may reap that pecuniary reward which you deserve; and as to a high place in the estimation of every true Californian, you may rest assured you have it. You, I believe, do not visit our portion of the country very often; but *your paper does*, regularly once a week; and here let me say that I know of several instances in which the readers (not subscribers) of your paper have been benefited more by it than it would cost them to take it half a dozen years.

I hope to have the pleasure of meeting you at our approaching State Fair, when and where I will show you the produce of one of my grafted vines, one year old from the graft; it contains more than thirty bunches of grapes, that bid fair to be *very large*; and if the farmers below can beat my melon, I'll see if they can beat my grapes also. This, I believe, is the proper season for grafting the grape vine. Those that I now have were grafted to the native stock one year ago last February. Many of them died: some did well. Tomorrow I commence grafting. My grafts have been kept from vegetating by being partially buried under ground, on the north side of a hill; and now that the sap has ceased to flow in the stock to be grafted, is the time to graft, *below the surface*: so says Downing.

Last year one of my peach trees had the curl leaf; this season, out of about five hundred, not one is affected in that way. The apple borer has been troublesome to my young apple trees, but by washing the stalks with a solution of potash and water (one pound to the gallon), I find it prevents their attacks altogether: see Downing on fruit trees. I have also discovered that trees that are thrifty and well watered are much less liable to the attacks of any insect than starved trees that are not attended to. I commenced my orchard in the fall of 1855, by importing 100 young trees from the East, and planting seeds and pits. I also bought a few choice trees from the garden of Messrs. Smith & Winchel, at Santa Clara. All my trees were bought for the purpose of getting grafts and buds. Last winter I sold some of my seedlings, and now have over one thousand trees, at the cost (deducting the amount for which I sold my seedlings) of $31 and my own individual labor. I merely mention these facts to show how easy, cheap and quick we may have an orchard when we try. My oldest trees are now loaded with fruit, and, without some disaster, next year I shall have a fine crop of various kinds of fruit.

Now gentlemen, the foregoing was not written for the purpose of seeing my name in your paper; but, as you have always taken so great an interest in everything of the kind, I have written it for *you*; nevertheless, if you think that anything I have said will benefit any person, you may use it as you please.

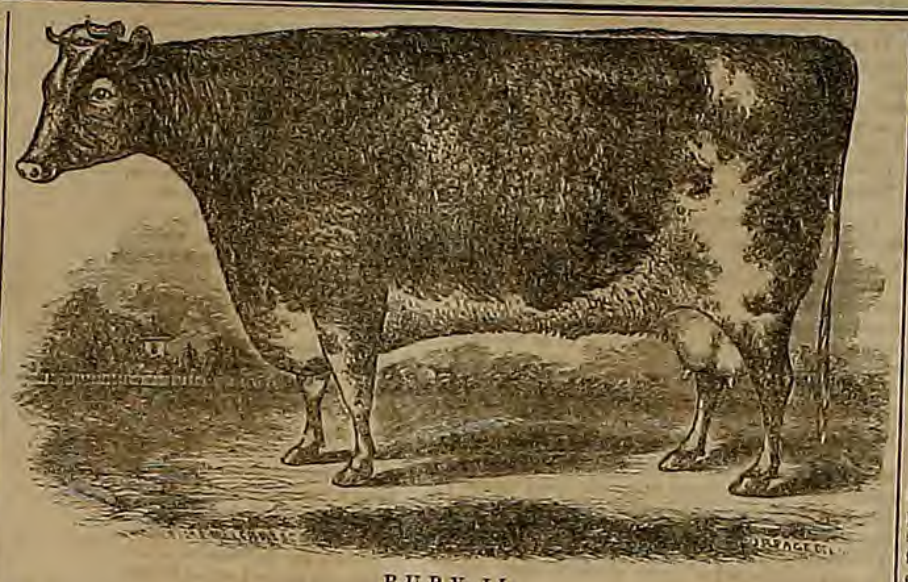
I am, very respectfully, your obedient servant,

JAMES BURNEY.

PEACHVILLE, Stanislaus County, June 15.

With many thanks, we know we can publish the above letter entire, and not subject ourselves to the charge of vanity or pride, for the letter speaks the sincerity of the writer, and his earnest interest for the cause of agriculture. We appreciate such a letter fully, and only regret we have not visited that section of country before this; but that pleasure is in store for us, and we anticipate much, for we know we have warm and true friends there. For the melon, which was indeed a very fine one, weighing 23¼ pounds, we return many thanks. It will refresh the physical man by its cooling crystal drops, and the kind words which accompanied it will refresh the spirit and bid us labor on.

This melon heralds Stanislaus as the banner county for early melons, and our kind correspondent as the first exhibitor of the season. It also shows that Stanislaus has many practical cultivators, for we are often indebted to that section for letters of the same practical character, which will ever do good. The letter of our friend, as will be seen, was not for the public eye altogether; but we trust it may stimulate others to take an interest in the cause we all have so much at heart. With many wishes for the prosperity of our correspondent, we return our thanks for the handsome gift.



RUBY II.

Rich roan; calved May 27th, 1850. Bred by, and the property of S. P. Chapman, Mount Pleasant Farm, Clockville, Madison county, N. Y.

Got by Buena Vista. Dam Ruby, by Symmetry (1270); g. d. Willey 3d, by Mars; gr. g. d. Young Willey, by York; gr. gr. g. d. Willey, imported by Abijah Hammond, Throg's Neck, Westchester county, N. Y. Ruby II. was winner of first prize at show of N. Y. State Ag. Society, held at Utica in 1852, in class of two-year heifers.

Windmills.

Until thorough experience shall prove to the cultivators that subsoiling the land, and that deep and constant cultivation, will better answer them and their wants than irrigation, they will devise all manner of ways to furnish themselves with the means to irrigate, and as water is so essential for the purpose of house and farm, so essential for stock, and also for refreshing plants and flowers, as well as the walks and grounds around our dwellings, we shall keep them advised of the best methods of obtaining a supply.

Windmills are now all the fashion, and the fashions of a windmill are as various as the style of hoops worn by fashionables, and they swing as widely because they are moved by the wind.

There are some patent windmills now advertised in this city, but they are costly, too costly. An excellent windmill is advertised in our columns this week, of which we shall give illustrations shortly.

We desire, however, to call the attention of our readers to the windmills used at Stockton, so universally; they are excellent, work admirably, and are cheap, i. e. cost but little, from $30 to $150. We spoke of those made by Messrs. Mills & Doll, and Messrs. Hart & Derrick, some weeks since. We have again visited Stockton, and seen them working; we examined Messrs. Hart & Derrick's, whose inventions we esteem excellent. We wish all inventors would see the importance of getting up plates and illustrating their inventions, so that they could strike the eye at the same time we speak of them. *We* cannot as yet afford to do all this, if inventors would do this, and if they would furnish us with their advertisements, we could accomplish much for them.

The mill of Messrs. Hart & Derrick, of Stockton, consists of a square frame of strong timber, about 4 by 6, lapped or bolted across the corners, on each corner are placed wheels inclining forward at the top, each of which bears against an angular shaped rim with wheels placed underneath, while resting on the corner of the frame-work is placed the crank, on which is fixed the wheel.

The shaft is set upon bearings which are fastened upon the rim first named, opposite the centre. Over the centre, and at right angles with the crank shaft, is an arch secured to the rim by bolts, and high enough to let the crank revolve. An arched spindle forms a centre and is attached to two vanes, one of which is fixed permanently to the rim, the other vane is loose.

These vanes are so arranged, that in a little breeze they always keep the wheel to the wind, and one is forced to the other by the increased force of the wind, and as this passes round, the same pressure against the other will force the mill around until it is brought out of the wind. This is the self-regulating mill, so that in severe gales the mill ceases to act, and thus is saved from injury.

We hope we may be understood, but it were better for inventors that wish to make known their works, to forward cuts of their machinery and we could aid them materially. The mill above described we esteem highly worthy the notice of all.

Manufacture of Sugar in New England.

IT was recorded in the Legislative proceedings a few days since, that Mr. Joseph Hurd, of Malden, recently deceased, had left a will in which he gives the sum of $5,000 to the Commonwealth, the income to be expended for prizes to promote and encourage the manufacture and refining of sugar in this State. A similar amount was left to the States of Maine, New Hampshire and Vermont. Mr. Hurd leaves an estate variously estimated at from $40,000 to $70,000. It is the intention of his heirs to contest the will on the ground of incompetency. The Boston Transcript gives the following interesting sketch of the deceased:

"Mr. Hurd graduated at Harvard College with distinguished honor in the class of 1797. In early life he was a merchant, but soon after the war of 1812 commenced he retired from the hazardous pursuits of commerce to a farm which he bought in Stoneham, beautifully situated on the eastern shore of Spot Pond. To his original purchase there he often added adjoining lots, until the estate finally comprised in all about 300 acres, including a water-power at the outlet of the pond. On that estate he resided in a secluded sort of manner about twenty-five or thirty years, and distinguished himself as a liberal patron of every project calculated to improve agriculture or the arts. There he had a flock of merino sheep, planted orchard and forests, quarried marble, drained the wet lands, built substantial walls, invented water wheels, kept a diary of the weather, &c., usually keeping in his service from ten to fifteen persons. He experimented largely, especially with a view to economize heat, and made many improvements in cooking stoves, &c. 'The Yankee Baker,' so common twenty-five years ago, was of his invention. In fact, he was all the time experimenting about something, and appears to have been in this respect and in his general character like Benjamin Thompson, otherwise known as 'Count Rumford.'

"He experimented many years in the growth of sugar beets and in the manufacture and refining of sugar, and acquired more knowledge on that subject than any other American, and probably than any other person in *any* country. As a proof, he invented a way of refining sugar for which he took out a patent, and sold it, without any exertion on his part, for the sum of $35,000. The fortunate purchaser acquired an immense profit by its use and the sale of patent rights.

"Mr. Hurd was a bachelor, and during the last fifteen years of his life was away from Stoneham most of the time, residing in the winter at the Merchants' Exchange in Boston; but of late years (having sold his landed estate) in a private way, at a tavern in Malden Center, where he appeared to be kindly attended and comparatively happy, but surrounded by a people of a class who usually do not appreciate such characters, and who probably construed the meditative and solitary habits of the feeble old gentleman as indicating an unsound state of mind."

THE LOGIC OF DOLLARS.—The New Orleans Bulletin refers to the brilliant results realized by the Illinois Central Railroad Company from the grant by Congress of nearly three millions of acres of land. After building the road, the Company will have land enough to yield the sum of thirty millions, and this, the editor says, is the logic of dollars which everybody can understand. The Pacific Railroad which is to pass through Texas, the same paper states, will be seven hundred and eighty-three miles long, and has a grant from the State of 8,017,000 acres, and a loan of $6,000 per mile. Taking the average price of the Illinois lands as a basis, this grant will yield the Pacific Company the grand sum of $120,000. The Bulletin thus brings to view the magnitude of the grant:

"Eight million acres of land is easily pronounced or written, but does the reader comprehend the quantity represented? It is greater than the combined area of Rhode Island, Delaware and Connecticut. It is nearly twice as great as Massachusetts, nearly as great as Massachusetts and New Jersey together, and greater than Vermont. The latter, the largest but one of the New England States, contains but 6,535,680 acres.

Maple Sugar.

THE aggregate product of Maple Sugar in the United States in 1850, as returned by the census of that year, was 34,253,436 pounds, whereof the several States producing any considerable amount made severally as follows:

New York	10,357,484 lbs.
Ohio	4,588,209 lbs.
Michigan	2,439,794 lbs.
New Hampshire	1,298,863 lbs.
Massachusetts	795,525 lbs.
Illinois	248,904 lbs.
Maine	95,452 lbs.
Vermont	6,349,357 lbs.
Indiana	2,921,192 lbs.
Pennsylvania	2,326,523 lbs.
Virginia	1,227,665 lbs.
Kentucky	437,405 lbs.
Missouri	178,910 lbs.
Tennessee	158,557 lbs.

Considering the extension of our settlements toward the North and West, the present high prices of sugar, the general attention this year to sugar-making, and the long season in which the flow of sap, though fitful, has been continued, we estimate the maple sugar made this year at fully double that of 1850, or not less than seventy millions of pounds, worth at least ten cents per pound, or an aggregate of seven millions of dollars. In fact, we do not believe a supply of sugar equal in quantity and value to this could have been imported and distributed to the inland farmers, who will mainly consume this home-made staple, for less than ten millions of dollars.

How much has it really cost the country to make this maple sugar?—that is to say: Suppose we had not made it, how much other wealth would have been created in its stead? Bear in mind that it has mainly been made at a season when our farmers are least actively and least profitably employed, and that all the work of preparation for sugar making pertains to the very heart of winter. Our estimate is that, had no maple sugar at all been made in the United States this year, the production of other wealth from labor directed to sugar making would not have amounted to three millions of dollars.

There is a mine of economic suggestion in these facts, which we prefer that the reader should develop for himself.—[N. Y. Tribune.

Interesting Chemical Discovery.

IT is notorious that horses, more especially racers and hunters, are subject to inflammatory diseases, and it is observed that grooms are short-lived. This has been ascribed to the air of unventilated stables being strongly impregnated with ammonia, an alkali that may be classed amongst the most powerful stimulants, the constant respiration of which predisposes to affections of the lungs. Various means have been tried with a view to the absorption of this subtle poison, but hitherto without attaining the desired result. During the last session of the Royal Agricultural Society of England, a paper was presented to the council by Mr. H. Reese, description of a plan for purifying the air of stables, by a mixture of gypsum or saw-dust with sulphuric acid. This mode is said to be at once safe, simple, and efficacious. Mr. Reese made some experiments in the extensive stables of Mr. Evans of Eastons, the results of which are stated to be quite satisfactory. The stables were, in the first instance, strewn with gypsum (crystallized sulphate of lime) coarsely powdered; but though the ammonia was evolved with the wetted straw, no trace of it was visible after two days' exposure, when examined with slaked lime. The stables were then strewn with the gypsum, moistened with sulphuric acid, and when examined next morning, every portion was found to have absorbed sufficient ammonia to emit its peculiar pungent odor when brought in contact with slaked lime. The stables had lost their close unhealthy smell, and, to use the words of the grooms, appeared to be quite sweetened. As it was evident the gypsum acted merely mechanically, affording a convenient absorbent surface for the acid, some further experiments were made, substituting sawdust for gypsum, which were attended by still more favorable results. The prepared mixture should be laid upon trays, as the acid is considered likely to injure the horses' feet. One part of sawdust will readily absorb three times its weight of acid solution, which should be mixed in the proportion by measure, of one part of sulphuric acid to fifteen of distilled water. The ammoniacal salt makes an excellent manure, but it should not be mixed with the straw until after removal from the stable.

GROUND SLUICING.—A common way of collecting gold now is by "ground sluicing"—a very simple process to those who understand it, but, perhaps, not very clear to many of our readers. A stream of water is conveyed in a ditch or flume to the claim or piece of ground to be worked. The water is there turned "loose" on the ground, and the desired direction given to it by digging a shallow trench through the claim. The stream soon tears out a channel for itself, with a little assistance from the picks and crow-bars of the men, who, with their legs cased in long India rubber boots, walk back and forth in the water, cutting roots of trees, throwing out large rocks and removing whatever other impediment which the force of the water may be unable to dislodge. As the ground-sluicing claim is generally on a hill side, the inclination gives the water great force, and it soon cuts a channel to the bed rock. At the lower end of the claim, where the inclination is less, the sand, gravel and gold settle, while the loam is washed away. Most of the gold is found in the crevices and rough places of the bed rock, and is taken up with trowels and spoons, after the water has been turned off above; but some still remains in the sand and gravel below, which are shoveled into a wooden sluice box and washed more carefully. Cross pieces or "riffles," an inch and a-half high, are placed at intervals in the box, which is set at an inclination great enough to keep part of the bottom board, adheres to it, and the force of the water not being great enough to raise it among the floating sand, it works down against the riffle among the heaviest of other sediment and is lifted out with a scraper and washed clean in a tin pan.—[Sac. Age.

sjudices of Farmers—"Book Farming."

WHILE a want of suitable educational facilis and advantages is sensibly felt, there are ner evils in the land which retard the intellecal and physical improvement of the country, d impair its productive capacity; among hich is one that farmers possess in a remarkble degree, prejudice. Prejudice *in favor* of ld ways and plans of farming—of old impleents—old, standard, superannuated notions—ld lunar, and equally ridiculous kindred influnces—and bitter, unyielding prejudice *against* cience as applied to their business—against the eachings of well conducted experiments—against agricultural books and newspapers—against everything, in fine, that is *written or printed*, and which may be included in the very odious, yet comprehensive term of "Book Farming." Unfortunately, we have a class among us, who imagine that all knowledge necessary for conducting farming operations is intuitive—the gift of nature. They not only disregard agricultural information, as derived from other sources, but they sneer at and deride those who have wisdom enough to avail themselves of its advantages.

Why should this bitter, senseless and uncompromising warfare be continued against "Book Farming?" What is it, after all, but the teaching of the laws of nature, unfolding the principles and explaining the ways and means by which she operates—giving to you, through the medium of agricultural papers, and the standard agricultural and scientific works, not only the well-matured and enlightened views and opinions of men of deep research and practical knowledge: but giving to you also, the results of various experimental processes, conducted by their own practiced hands, observed by their own critical eyes? Are those who have such a holy horror of "book learning," so profoundly wise that they understand all the laws and all the mysteries of vegetable life? Do they understand all the properties and uses of the various gases, and other elements floating around and about us? Do they know in what vegetables they are most required? Do they understand how; and with what substances these gases can be most readily fixed, and the extent to which it is profitable to use them? Do they fully comprehend all the other mysterious agencies by which they can use all the other means and advantages which are spread out in such profusion before them? Is there nothing hidden in the deep arcana of nature which has not yet been fully unfolded to the sharp-sighted vision and clear comprehension of these intuitive *wiseacres?*

I know that some men are always wise, always infallible, in conducting their operations, and, consequently, that "experimental farmers" are not always successful in making their farming business profitable. But, pray, how does that unfavorably affect either you or me? The knowledge of a failure, in a particular case, under particular circumstances, may be as profitable and as advantageous to us as if the same experiment had proved eminently successful. It is quite as necessary, and as prudent, to understand how and when to avoid evils and dangers as to profit by what is known to be good and safe.

In truth, fellow citizens, while I claim to be highly conservative in most things, and am regarded as an "*old fogy*" in others, still I must be permitted to say that I have no patience—no toleration for that class of farmers who are constantly decrying agricultural education, and who would stop suddenly every effort to cultivate the intellect and to improve and elevate the habits and the taste of those connected with country life. Their unconquerable obstinacy—their mole-eyed and bitter prejudices are equaled only by their deplorable ignorance and their unbearable perverseness. Their precept, example and influence, are continually evil. They not only refuse to enlighten themselves, but they discourage others, and especially the young, in every effort and commendable undertaking.

If "knowledge is power," in the hands of every other class, I cannot perceive why it is not so to the agriculturist. The divine, the lawyer, the physician, the artist, the mechanic, the merchant, the musician, and all others, seek to obtain not only the particular education necessary and appropriate to their calling and business, but they desire to acquire a knowledge of all kindred branches, so as to increase and enlarge their capacity for the highest usefulness, and to elevate them in their professional standing. The more extensive, varied and thorough the attainment of any man, the more useful, reliable and prominent will he be in his position. The farmer it is who alone disregards and deprecates substantial learning, and inveighs against intellectual and personal accomplishments. It is no marvel therefore, that the stupid, dull ignoramus of the family, should be retained at home to be the future farmer; while, the active sprightly and intelligent lad, should be educated for what the unwise father might regard as the more reputable and more valuable business in life. How sadly do such parents undervalue the dignity of their own calling, and how little do they know of that wide, expansive range, which agriculture affords for the exercise of the highest capacity—the use of the most liberal, thorough and accomplished education; and for the enjoyment of all the refinements, comforts and luxuries of a Christian life.—[Ohio Ag. Rep. '55.

FUNNY RAT-TRAP.—A correspondent of the Genessee Farmer relates the following funny way of catching rats: "I build my corn-crib on posts about eighteen inches high, made rat-proof by putting a broad board or sheet-iron on top of the posts. Make every thing secure against rats except the granary, and have this rat-proof except at one of the back corners. Here, where they will like it best, make a nice hole with a spout five inches long on the outside, where they can go in and out and eat at pleasure. Then, if I think the rats are too numerous, I take a bag, after dark, and slip the mouth over the spout on the outside of the granary. Then send "Ben" in at the door with a light, and the rats and mice will all run into the bag. Then slip the bag off the spout, and slap it once or twice against the side of the granary. Turn out the dead, and in an hour or two repeat the process. After all are killed, stop up the hole till new recruits arrive, which catch in the same way."

ANOTHER, BUT TOO SELFISH.—An inquirer wishes to know how he may rid himself of the rats which so infest his premises, and I desire to inform him how I got rid of mine, that had taken possession of my house both up-stairs and down. I just went to the paper-mill and procured three or four pounds of chloride of lime and placed it in their paths, and they all left forthwith; a neighbor declaring, that on that night he had about a thousand of them on his premises, and I guess he had!

The Age of Seeds.

THE fact that age adds value to seeds may be perfectly familiar to agriculturists, but it is new to us. A gentleman in this city is in the habit of saving his melon seeds until they are six or seven years old, and maintains with entire confidence, that, in consequence, they germinate more readily, and originate more prolific plants. This theory has recently received striking confirmation in France. In 1852, as we learn from the Paris correspondent of the N. Y. Times, a few grains of wheat were discovered in the tombs of some ancient mummies in the south of France, supposed to have been two thousand years old. They were planted, and produced the astonishing amount of 1 200 grains to one. The Government assumed charge of the matter; and since that, the product has been magnified in such an immense proportion, that the minister of agriculture is now enabled to distribute large quantities over the empire, with instructions from the government farm as to the best mode of cultivation.

It is suggested that the immense productiveness of this wheat is owing to the long *rest* of the seed. We imagine that it would be hard to find sufficient cause in any other direction. It opens a very fine field for speculation and inquiry, and if any of our readers have facts bearing upon the subject we should like to get hold of them.—[Springfield Republican.

We have long been of opinion that seeds, kept at a low temperature and subject to no changes of heat, cold or moisture, would preserve their vitality an indefinitely long time—ten years, or ten thousand, or ten million. Our belief is founded on the idea that no change is going on without a variation of temperature, or in the degree of moisture; and if no change is passing, then no matter how long the time, the seed will be the *same* at any and all points of the limitless future.

It is so with cold-blooded animals. If a frog, after being locked up in solid rock thousands of years, will arouse himself from suspended animation, and snuff the nearest water, and instinctively hop away towards it, why would he not after millions of years. If a change were going on in his organization, a few years would destroy his vitality; but if no change is going on, then it makes no difference how long or how short the time.

The idea that seeds improve by keeping, is "bran" new to us, and we hardly think it can be correct; but it may be, and it is well worthy of the French Government and any other to inquire into it. One thing is certain—there is a great deal yet to be learned. If governments will employ their resources to enlarge the boundaries of human knowledge, it will be well.

We are six thousand years old, as a race, and not half as wise as we might be. If the American people would establish an Agricultural Department of the Government, it would make 10 000,000 farmers wiser. At an expense of $5,000,000 a year—an enormously high estimate, five times as much, we suppose, as need be expended—it would cost but fifty cents a head—almost cheap enough.—[Plow, Loom, and Anvil.

THE idea that *some* seeds improve by age, is by no means a new one. It has long been known and taught, as we can attest, that melon, squash, cucumber, and several other kinds of seeds, produce much better for being several years old; and the same may be the case with yet other seeds. But it is also well known that some seeds deteriorate according to their age, by being kept two or more years. Of course much depends upon the manner of keeping.

A Change for the Better.

THERE is a tract of the town of Wilbraham on which the farmers of the last generation could not obtain a living, though they seemed willing to live poorly. They did not even raise the rye which they ate. This they obtained by going to other parts of the town, reaping rye by the day, and taking their pay in the grain which they reaped. Now that tract is occupied by some of the wealthiest farmers in the town, and they have made their money from the soil which they occupy. That soil *now* grows *rye*—and it grows anything else that grows in the town. I need not tell you that the present occupants of that tract of country have been active members of your society from its commencement. I am informed that twenty-five years ago, two thirds of the farms of Ludlow did not pay the current expenses of their occupants, and their expenses then were not so great as the current expenses of the occupants now, but instead of the heavy mortgages that then existed, now there is money to let. What is the cause of the change? Cause, sirs, there is cause enough. Beside the temperance reformation, to which no doubt they owe something, a flood of light and knowledge has been poured in upon them from the agricultural press and from agricultural fairs. And if any are there who does not take the papers, and who do not attend the fairs, still, the light from their neighbor's farms has shone in upon them, and dispelled the darkness in which they would willingly grope. —[Prof. Marcy's Address before the Hamden Co. Ag. Society at Springfield, Mass.

WASN'T GOOD AT CONUNDRUMS.—Last summer there was a successful camp meeting held somewhere in New Jersey. A very eloquent and popular preacher was present at it, and the thing "took." Multitudes were brought to the anxious bench. One day a dry and absent-minded unsophisticated old fellow wandered into the camp-meeting, and by-and-by found himself near the preacher's stand. Bro. Stern was giving the sinners their deserts just about that moment, and shouted with peculiar emphasis:

"What shall *you* do to be saved?"

"Yes," cried he, looking directly at Billy, the absent-minded one. "What shall you do to be saved?"

"Excuse me," said Billy, in a flustered, confused way, "but I—I—am—not good at conundrums."

JOHN KEPLER—HIS ENTHUSIASM.—When John Kepler discovered, after seventeen years of incessant investigation, the third of his laws, namely, that relating to the connection between the periodic times and the distances of the planets, his delight knew no bounds. "Nothing holds me," said he; "I will indulge in my sacred fury; I will triumph over mankind by the honest confession, that I have stolen the golden vases of the Egyptians, to build up a tabernacle for my God, far away from the confines of Egypt. If you forgive me, I rejoice; if you are angry, I can bear it. The die is cast; the book is written, to be read either now or by posterity, I care not which. It may well wait a century for a reader, as God has waited six thousand years for an observer."

IT is not money *earned* that makes a man wealthy; it is what he *saves* from his earnings.

NEW VERSION OF HIAWATHA.

[We clip the following from an exchange paper. It is going the rounds, and it is worth reading wherever newspapers are read; for *there* it will apply, in more or less cases, and having received a communication from our old and esteemed correspondent "Roving Jack" upon the same subject, it is particularly applicable to his strain. We are happy, however, to say we can name *whole* counties where the coat would *not* fit. If then any chance reader, or any of the forgetful ones, feel touched, we cannot lose the beauty of the poetry or prose because it may hit them; the galled jade only winces. But hear from "Roving Jack," and the poet too; then make up your minds what you will do.]

A POETICAL DUN.

Should you ask me why this dunning,
Why these sad complaints and murmurs,
Murmurs loud about delinquents
Who have read the paper weekly,
Read what they have never paid for,
Read with pleasure and with profit,
Read of news both home and foreign,
Read the essays and the poems,
Full of wisdom and instruction;
Should you ask us why this dunning,
We should answer, we should tell you,
From the printer, from the mailer,
From the prompt old paper-maker,
From the landlord, from the carrier,
From the man who taxes letters
With a STAMP from Uncle Samuel—
Uncle Sam the rowdies call him—
From them all there came a message,
Message kind but firmly spoken,
"Please to pay us what you owe us."
Sad it is to hear such message
When our funds are all exhausted,
When the last bank-note has left us,
When the gold coin all has vanished,
Gone to pay the paper-maker,
Gone to pay the toiling printer,
Gone to pay the landlord tribute,
Gone to pay the active carrier,
Gone to pay the faithful mailer,
Gone to pay old Uncle Samuel,
Uncle Sam the rowdies call him—
Gone to pay the Western paper,
Three and twenty hundred dollars!
Sad it is to turn our ledger,
Turn and see what sums are due us,
Due for volumes long since ended,
Due for years of pleasant reading,
Due for years of toilsome labor,
Due despite our patient waiting,
Due despite our constant dunning,
Due in sums from two to twenty.
Would you lift a burden from us?
Would you drive a specter from you?
Would you taste a pleasant slumber?
Would you have a quiet conscience?
Would you read a paper PAID FOR?
Send us money, send us money,
Send us money, send us money,
SEND THE MONEY THAT YOU OWE US!

Fanatics the Benefactors of Mankind.

AT every stride in the study of history we encounter the fact, that *so-called fanatics of every age are the benefactors of mankind.* This proposition, though it may appear extraordinary, and even absurd to the casual observer, is capable of clear demonstration.

The conflict with error in every period of time has been beset with sacrifice and peril; and every great truth which has subserved the interests of humanity has struggled to success only through the fiercest warfare. The greatest and best men the world has ever seen have generally passed among their cotemporaries only as impracticable, visionary, or wicked men; they have been ridiculed as the champions of wild chimeras and Utopian fancies, or denounced as enemies to God and traitors to the State. The most orderly men, with the keenest appreciation of the claims of justice and religion, have been hunted down, persecuted, imprisoned, and even doomed to a death of tortures, as the promoters of disorder and injustice and the enemies of religion. They have pined in gloomy dungeons, the victims of inexorable bigotry, or moved among their fellows the objects of suspicion and detestation, subjected to social ostracism and hopeless poverty; while, on the other hand, those who by impudent pretensions have sought eminence by treading on the necks of the multitude, have often been the favorites of the people, who have feasted them with fat things.

The philosophy of this is very simple, and a glance beneath the surface convinces us that such is the established order of nature, and that it can not by any possibility be otherwise. Men and nations adopt a certain philosophy, creed, or form, which they exalt in their own minds, if not to absolute idolatry, at least as the embodiment of all truth and perfection. These are transmitted from generation to generation—they are learned at the mother's knee, in the school room, in the church—they fasten themselves upon us till they become a part of our very selves; and the necessary consequence is, that we look with suspicion and alarm upon any proposition which does not square in all particulars with these lessons of our lives. Motion is the law of progress, and stagnation is the tendency of dogmatism. Nature in every age rears her instruments of progress—men of far-seeing intellects, with aspirations above their fellows, who penetrate beneath the surface of things, and arraigning established opinions, subject them to a relentless investigation. They discover errors in creeds and philosophies which have been almost worshiped for ages, and, like true men, forthwith seek a remedy. Now the waters begin to move. Nature's agitators are at work, and behold! progress and stagnation are in fierce combat. Rock-ribbed and hoary-headed conservatism buckles on his armour to meet the audacious agitators. But unable to subdue with arguments, bribe with flattery or offers of promotion, he raises the cry of fanatic! heretic! traitor! arousing against the apostles of the new faith the deep-seated animosities of unrelenting bigotry, prejudice, and superstition; and these brave men find arrayed against them the predilections of centuries.

In a word, the enlightened minds of all time, who have grasped great ideas, which their fellow-citizens could not yet comprehend, have not found sympathy with the masses, because the apparent interests, the education, and prejudice of the masses are against them.

It is well said by a modern author, that "the scholar who is accustomed to the pursuit of abstract philosophy lives in a region of thought far different from that by which he is surrounded. The range of his understanding is remote from the paths of common minds, and he is often the victim of the contrast. It is not unusual for the world to reject the voice of truth, because its tones are strange; to declare doctrines unsound only because they are new, and even to charge obloquy or derangement on the man who brings forward principles which the selfish repudiate. Such has ever been the way of the world; and Socrates, and St. Paul, and Luther, and others of the most acute dialecticians have been ridiculed as drivelers and madmen."

We of Christendom go up to our temples of worship every Sabbath, and pay homage to one who, while with men, was regarded as the prince of fanatics and impostors. Was there ever persecution more merciless, unrelenting, and diabolical than that which followed the "man of Nazareth?" The conservatism of the time arrayed against him all the heartless prejudice of the misguided people—the land was filled with denunciation and falsehood—"and many of them said, He hath a devil, and is mad." Why was all this? Simply because men could neither appreciate nor comprehend, as they can not yet, the truths he promulgated.

The same hatred followed his apostles. They were looked upon as the most curious of fanatics. Paul avowed that, "after the way which they call heresy, worship I the God of my fathers;" and the assertion of Festus—"Paul, thou art beside thyself; much learning doth make thee mad," is a fair index to the light in which this brave and inspired agitator was regarded by the leaders of society in his age.

But it is by no means in the promulgation of religious doctrines alone that this rule applies. The men who have introduced the most useful discoveries and inventions, in science and mechanism, have been subjected to furious persecution. The numbers of these victims of prejudice are surprisingly numerous. Now that the theory of the circulation of the blood is universally adopted, we can hardly conceive that the *savans* followed its discoverer with ridicule and hatred.

The art of printing, unquestionably the most important and useful invention known to history, was declared to be the work of the devil! In an age of barbarism and superstition the name of Faust, the reputed inventor, became the synonym of all that is diabolical! Yet what a benefactor of mankind was he! What reason have all subsequent generations to revere his name and bless his discovery!

The familiar story of Galileo, who with his telescope discovered the phases of Venus, thus fulfilling the prediction of Copernicus, and establishing the theory of the earth's motion, affords an impressive illustration of our subject. Against him, for daring to promulgate this doctrine, were hurled the denunciations of the Romish church, which claimed for herself perfect knowledge and infallibility. This theory, though capable of clear demonstration, was regarded as insane beyond precedent, and heretical beyond toleration. Yet this discovery is the *sine qua non* of the sublime science of astronomy, which so delights the imagination of the student, and impresses the human mind with such conceptions of the majesty of our heavenly Father, and serves human use in a thousand ways.

But in the cause of civil liberty, how many brave defenders of the inalienable rights of man have suffered martyrdom as fanatics and traitors! And but for these same men—these "fanatics"—the world would to-day groan under the yoke of oppression as heavy as that of the darkest ages.

The march of freedom in any country has been marked by the tears and blood of her faithful children. Endowed above the multitude which surrounded them, with a clear perception of human rights, they have been the victims of despotism; the people, unable to comprehend their theories, have immolated them upon the shrine of ignorance and superstition. But the smoke of the sacrifice has been to succeeding generations the grateful odor of truth and heroism, inspiring millions with the sentiments for which they died rather than renounce. "These are our apostles; these our martyrs; their names, their virtues, their unhappy but brave and honorable death," become the watchword and inspiration of the defenders of justice through all time.

The examples which illustrate this are countless as the waves of ocean—they are the fruitful theme of the historian, the poet, the painter, and the sculptor. In our own country we make pilgrimages to Plymouth Rock, with almost as much devotion as inspired the knights of the feudal ages to visit the shrines of the Christian faith in the holy city. Yet the pilgrims of the stormy sea who landed upon that rock, and laid the foundation of that mighty empire of freedom and civilization, were esteemed the fanatics of their time. They were the exiles of religious despotism—the outcasts of an age which could neither tolerate their liberal opinions nor appreciate the fortitude with which they suffered martyrdom. But "enduring every hardship themselves, they were the servants of posterity, the benefactors of succeeding generations."

There is no man to whom this country or the world is more indebted for "soul-liberty" than Roger Williams. He, too, was a "fanatic"—an exile from British persecution. "But," says Bancroft, "his wrongs had not clouded his accurate understanding; in the capacious recesses of his mind he had revolved the nature of intolerance; and he, and he alone, had arrived at the great principle which is its sole efficient remedy. * * * The doctrine contained within itself an entire reformation of theological jurisprudence; it would blot from the statute-book the felony of nonconformity, would quench the fires that persecution had so long kept burning, would repeal every law compelling attendance on public worship, would abolish tithes and all forced contributions to the maintenance of a religion, would give an equal protection to every form of religious faith, and never suffer the authority of the civil government to be enlisted against the mosque of the Mussulman or the altar of the fire-worshiper—against the Jewish synagogue or the Roman cathedral." Williams was the first man in modern Christendom to announce the doctrine of complete religious freedom; and the colony of Rhode Island, founded under his auspices, was its first asylum, where every man, by whatever faith, could worship God according to the dictates of his own conscience. Yet this very doctrine and the establishment of this asylum, the germ of the future liberties of America, which still cause his name to go down to all future time as one of the greatest benefactors of mankind, involved him in perpetual persecutions, cares, and sufferings. He was driven to the wilderness in the depth of winter, with no home nor friends save such as he could find within the hut of the savage. And thus do men regard as fanatics their greatest benefactors.

It is needless to remind our readers that the American revolution, so glorious in the world's history, was esteemed a "rebellion," and the men engaged in it fit for the dungeon and scaffold. All those names we hold in grateful remembrance as the defenders of our rights and the founders of our enlightened institutions, were odious to the powers that *were*, as fomented of civil discord and butchery. Yet the fruit of their fanaticism is one of the most powerful, free, and enlightened of nations.

The lesson of all this is plain and simple. Man should never denounce a theory till he is satisfied of its absurdity by a candid investigation.—[Life Illustrated.

Condition of Our Indians.

[CONCLUDED.]

Dr. A. H. Hoerchner, of Calaveras county, June 22, 1856, says: "Their condition at the present time is rather bad; from 1849 to the spring of 1854, their mode of living and condition were, all in all, tolerably comfortable; they then had facilities for digging gold, and were doing remarkably well; were living on beef, bread, beans, rice, &c., along with their accustomed food of acorns, grasshoppers, &c., when to be had; but since that time they are in a rather poor condition, as their gold mining is almost gone, surface diggings being scarce. Their hunting grounds are destroyed, as game has been driven back to the mountains. Their fishing is almost gone, which was a great source of revenue formerly to them, as the beds of the rivers are now almost dry, and the fishery destroyed. Acorns, their only dependence, now are scarce, and I think, on the whole, they are looking a rather hard winter in the face. Their clothing is now scanty, compared with former years, as that little gold they are getting is not sufficient to get them flour and beef."

W. F. McDermott, of Calaveras county, August 6, 1856, says: "The number at present in this neighborhood (McDermott's bridge) partly attached, may be from forty to fifty, having decreased at least sixty per cent. during the last six years. *Causes: cold* in winter; improper use of ardent spirits, imprudently supplied by whites; *murders among themselves*, and also murders committed by whites with impunity when intoxicated, &c., &c. There are scattered parties of Indians in various locations within from twenty to thirty miles of this place; whenever they congregate, which is occasionally, they number about five hundred. Their mode of subsistence is *fishing* and *fowling;* some dig considerable gold. This pursuit is frequently discouraged by means of the whites surreptitiously obtaining their gold without an equivalent, except in spirits, which often exasperates the injured Indian, already sensitive of his wrongs, and he naturally retaliates, which too often terminates in bloodshed and murder."

S. M. Jamison, of El Dorado county, July 30, 1856, says: "Character generally very good; condition and mode of living not so bad as might be supposed; hunting, fishing, gathering nuts and berries, and mining, being their general employment. I have frequently seen them buying flour, sugar, coffee, &c., and they appear to live on strong food."

J. W. Gilbert, of El Dorado county, August 16, 1857, says: "Their character would, perhaps, compare favorably with Indians in general. They are very peaceable, and no hostile demonstrations are anticipated. Instances of robbery, theft, &c., are not numerous, although some have occurred, and the supposed offenders have generally been punished by the whites. They do not seem to be remarkable for duplicity, and it seems impossible to induce any of them to give information in regard to those who violate the law by selling intoxicating liquors. They are considerably addicted to the use of ardent spirits, and manage to procure it in considerable quantities, but not so much as formerly. Their condition, in point of clothing, food, &c., is very good, being easily and apparently satisfied with cast-off articles of dress, and procuring food by begging, and purchase with small quantities of gold which they obtain in the different placers. In morals, their condition is in some respects deplorable. The almost general prostitution of their women, their avidity for gambling, and love for intoxicating drinks, is the bane of their condition.

"In their way of living they make use of quite a variety of food—in part of game, acorns, grasshoppers, clover roots, of some kind of berries, seeds of grass, bushes, &c. They dress differently, according to their inclination and means. It is not usual to hear of anything like a brawl among them. In winter they use huts, constructed of bark in the usual manner, to shelter them; but live under trees in the summer."

R. F. Parker, Trinidad, Klamath county, August 10, 1856, says: "The squaws do all the work, such as getting wood, cooking and making baskets, while the men are eating and sleeping."

William Benitz, Fort Ross, Mendocino county, July 20, 1856, says: "They have some confused ideas of an existence after death, and burn their dead instead of burying them. They also burn the clothing, beads, arms, provisions, &c., of the deceased, so that he may not be in want of anything; they are also believers in witchcraft, believing that a man who has come in possession of this terrible gift can transform himself into a bear to do mischief to his enemies. The condition in which the Indians find themselves in parts where there is plenty of game, fish and shell-fish, is not bad at all—apparently they are the happiest people on the globe; they never get tired of a life that alternates in eating and sleeping only. The Indians here live together in rancherias, subsisting on acorns, wild oats, manzanitos, different roots, herbs, game, fish, shell-fish, sea grass, berries, &c. Those Indians that live in the vicinity of the ocean consider themselves the best off—the beach supplying them continually with shell-fish, and sea grass. If I should give my opinion in regard to ameliorating the condition of the Indians, I would suggest to remove all the tribes that live on lands, the occupants of which are in favor of removal, to the reserves; have overseers there that compel them to cultivate the ground, in order to raise sufficient produce to supply them."

H. G. Heald, of Russian river, Mendocino county, August 26, 1856, says: "They are generally indolent, and appear to care very little for property. The live in rancherias of from 20 to 50, or more, and subsist upon seeds, fish and game, &c. The men work occasionally for the farmers, and receive about fifty cents per day. They are very poor, and are frequently going about the neighborhood almost naked. I think it would be well for the department to remove them to some reservation where they could be made to earn their living."

G. W. Applegate, of Lisbon, Placer county, July 23, 1856, says: "They are lazy and trifling, and have taken up all the vices and evils of the day; the male portion getting drunk whenever they can get the spirits, and very often the females are made drunk by the low and contemptible whites for infamous purposes—in fact, they are in as wretched a condition as you can imagine; their hunting grounds are all occupied by the farmers, whose hogs destroy their acorns and manzanito berries. They are too lazy to work, and in their present situation it is with them either beggary or starvation."

H. H. Brown, Mountain Springs, Placer county, July 27, 1856, says: "Our Indians, with few exceptions, are industrious, honest and tem-

perate; the females strictly virtuous in almost every instance."

Lewis Stark, of Quincy, Plumas county, August 1, 1856, says: "There are about 450 Indians in this locality, in American and Indian valleys; in character, friendly and peacable; their condition rather destitute, having to depend, during many of the winter months, on the charity of the whites; mode of living, nomadic. In Honey Lake valley there are several thousand Indians, distant about forty miles from this place."

John Rains, of Temacula, San Diego county, July 24, 1856, says: "Of the San Luis Rey Indians, there are in all belonging to this between twenty-five and twenty-eight hundred; they live in nineteen different rancherias, having a captain and alcalde in each, and one headman over all. They are Christians; raised to work; all cultivate more or less; all are good horsemen, and make good servants; very fond of liquor, easily managed when sober, but great fools when drinking. This year their crops have failed, owing to the want of water. There are some of them in a starving condition, and are obliged to steal to maintain themselves and families. The country of the San Luis Rey Indians, is joined by the Cowela and Diegena Indians. They are about six thousand, all told."

A. W. Vonschmidt, deputy United States surveyor, relative to the Mono Indians, living on the east side of the Sierra Nevada, in Mariposa and Tulare counties, August 10, 1856, says: "They are a fine-looking race, straight, and of good hight, and appear to be active. They live in families, scattered throughout the entire valley, and get their living in various ways, such as it is. Game is very scarce; some few antelope are to be found in the valley, but the bow and arrow is not the proper instrument for game of that description, even if it were plenty. Hares are also found in some portions of the valley, which form their principal article of food in the meat line; but their principal article of food consists of clover and grass seeds, also pine nuts, which, I am told, fail sometimes.

"They also can get fish, of a small size, in Owen's river (the lakes Owens and Mono are both salt, and have no fish). But with all this, they are in a poor condition. The families being divided off, and each having his own hunting ground, causes some to go without food for days. One chief told me that sometimes he had nothing to eat for six days at a time. I estimated the number to be about one thousand in the entire valley; they are in a state of nudity, with the exception of a small cloth about their loins, and, so far as I could see, are in want of every article of clothing."

C. E. Jewett, of Columbia, Tuolumne county, August 6, 1856, says: "This tribe (the Mewahs) number probably about three thousand this side of San Joaquin river. Character, very friendly, and generally honest, respecting the property of the whites, more especially where they receive good treatment; in general they have a great regard for the truth. The men dislike work. The females are industrious; large numbers are given to intoxication. Condition and mode of living: they live generally in villages, composed of a collection of huts of a miserable description. They subsisted, formerly, on game, fish and fowl, together with acorns, roots and seeds of various kinds, the spontaneous productions of the soil; recently they add to these, flour, beef and various other articles known to civilized nations. They complain of the injustice of the whites in destroying their means of subsistence (the natural productions of the soil), and not furnishing them others. They live in small bands of from fifty to two hundred members. Each band has its chief, who appears to be independent of all other chiefs, although they meet in council on matters of importance to the nation. The position of chief is hereditary. Polygamy is practised."

Robert McAdam, of Dry Creek, Yuba county, July 22, 1856, says: "Their character for peace is good; I have never known them to molest any white person. Their mode of living is on acorns, fish, grasshoppers, begging, and by prostitution to a very great extent. I know of no other means by which they obtain their subsistence. This year there will be no acorns, fish, or grasshoppers in this section; upon what they are to subsist for the coming year, unless removed by government, is a matter of doubt."

J. J. Bowlby, of Camptonville, Yuba county, July 30, 1856, says: "They are in a very destitute condition. Their living is on acorns, and such other things as they can pick up, together with begging; however, some few of them work. In the winter they suffer very much for want of blankets and provisions; besides, they are becoming very sickly."

In conducting the affairs of this superintendency, I have rejected entirely the idea of making treaties with the Indians, or recognizing, in any way, the rights which they claim to the soil.

The Indians in every portion of the State have already been made acquainted with the policy proposed by the government in regard to them, and are everywhere highly pleased with it, except in locations where malicious or interested white persons have, by false representations, prejudiced them against it. A few persons of this class in the various localities have been the cause of most of the Indian difficulties which have occurred in this State. The Indians are generally peaceable and well disposed towards their white neighbors; and in almost all cases where they have been guilty of aggression, it has been to avenge some outrage committed upon them by the class of persons in question.

In closing this report, however, it is proper to remark, and I do it with great pleasure, that the mass of white settlers of this State have uniformly treated the Indians with the greatest possible kindness; giving them protection and advice, and frequently contributing of their scanty means to relieve their pressing wants, and save them from actual starvation. This was not an unusual circumstance, but has been of daily occurrence from 1849 to the present day; and there are even now hundreds, and I doubt not thousands, of Indians, scattered remnants of tribes, whose existence depends materially upon the good advice and charity of our citizens. The general course of conduct of the people of California towards the Indians has been such as to merit the approbation of all good men, as well as the thanks of the Indian department.

The outrages upon the Indians, which have been, I regret to say, of frequent occurrence, have emanated from a few lawless and desperate men, for whose conduct the masses should in no way be held responsible. No philanthropist or friend of the Indian can or ought to deserve a better state of feeling towards this unfortunate and apparently doomed race, than forms the sentiment of the people of California, embracing every class of our citizens, as well as in the agricultural districts, from one extremity of the State to the other.

The number of Indians now collected and residing upon reservations is—

At Klamath	2,500
At Nome Lacke	2,000
At Mendocino	500
At Fresno	900
At Tejon	700
At Nome Cult valley (attached to Nome Lacke)	3,000
At King's river (attached to Fresno)	400

making in all ten thousand.

The number of Indians not connected with the reserves cannot be correctly estimated.

The following statement is made up from the most reliable information I have been able to obtain:

On and attached to the reservation as above	10,000
In San Diego and San Bernardino counties	8,000
In Los Angeles, Santa Barbara, San Luis Obispo, Monterey, Santa Clara and Santa Cruz counties	2,000
In Tulare and Mariposa counties	2,500
In Tuolumne, Calaveras, San Joaquin, Alameda and Contra Costa counties	4,100
In Sacramento, El Dorado and Placer counties	3,500
In Sutter, Yuba, Nevada and Sierra counties	3,500
In Butte, Shasta and Siskiyou counties	5,500
In Klamath, Humboldt and Trinity counties	6,500
In Mendocino, Colusi, Yolo, Napa, Sonoma and Marin counties	15,000

Making the total number of Indians within this superintendency sixty-one thousand six hundred. Very respectfully, your ob't serv't,

THOS. J. HENLEY,
Superintendent Indian Affairs.

Hon. George W. Manypenny,
Com. of Ind. Affairs, Washington city, D. C.

The Horse Charm;

OR THE GREAT SECRET OF TAMING HORSES.

The horse-castor is a wart, or excrescence, which grows on every horse's legs, and generally on the hind legs. It has a peculiar rank musty smell, and is easily pulled off. The ammoniacal effluvia of the horse seem peculiarly to center in this part, and its very strong odor has a great attraction for all animals, and especially canine, and the horse himself.

For the oil of cumin, the horse has an instinctive passion; both are aboriginal natives of Arabia, and when the animal scents the odor, he is instinctively drawn towards it.

The oil of rhodium possesses peculiar properties. All animals seem to cherish a fondness for it and it exercises a kind of subduing influence over them.

The directions given for taming horses are as follows:

Procure some horse-castor, and grate it fine. Also get some oil of rhodium, and keep the three separate in air-tight bottles.

Rub a little oil of cumin upon your hand; approach the horse in the field, on the windward side, so that he can smell the cumin. The horse will let you come up to him then without any trouble. Immediately rub your hand gently on the horse's nose, getting a little oil on it. You can then lead him anywhere.

Give him a little of the castor on a piece of loaf sugar, apple, or potato.

Put eight drops of the oil of rhodium into a lady's silver thimble. Take the thimble between the thumb and middle finger of your right hand, with the fore-finger stopping the mouth of the thimble, to prevent the oil from running out, whilst you are opening the mouth of the horse.

When you have opened the horse's mouth, tip the thimble over upon his tongue, and he is your servant. He will follow you like a pet dog.

Ride fearless and promptly, with your knees pressed to the sides of the horse, and your toes turned in and heels out, then you will always be on the alert for a shy or a sheer from the horse, and he can never throw you.

Then if you want to teach him to lie down, stand on his nigh or left side; have a couple of leather straps about six feet long; string up his left leg with one of them round his neck; strap the other end of it over his shoulders; hold it in your hand, and when you are ready, tell him to lie down, at the same time gently, firmly and steadily pulling on the strap, touching him lightly on the knee with a switch. The horse will immediately lie down. Do this a few times, and you can make him lie down without the straps.

He is now your pupil and your friend. You can teach him anything; only be kind to him, be gentle. Love him and he will love you. Feed him before you do yourself. Shelter him well, groom him yourself, keep him clean, and at night always give him a good bed, at least a foot deep.

In the winter season, don't let your horse stand out a long time in the cold, without shelter or covering; for remember that a horse is an aboriginal native of a warm climate, and in many respects, his constitution is as tender as a man's.

The above we find floating round in the papers without any credit or other mark to show its parentage. The latter part of it may be well enough, and in the preceding some may have faith, but we have none for various reasons.

Gone to Dinner,

"GONE to dinner. Back in fifteen minutes." That notice stands on your office door.

You gormandizer! you ostrich! you great pig! Also, you lean, scrawny, wizzled, anxious-looking old thing! You poor, irritable, touchy, snappish fellow!

My gobbling friend, eating is not a process whose operation and results are wholly confined within the stomach, as flesh is put to seethe or soak within an iron pot. It tells upon muscles and vitals, and brains and nerves—upon mind and soul. Fifteen minutes! Fifteen minutes is enough to eat one cracker and to drink a glass of water; and see the mass of victuals that you are pitchforking into your countenance, as if you thought a harpy was watching to snatch it from you!

How dare you bolt those chunks of meat, all soaked with "gravy," and that greasy, sodden pie, and hot cakes, and hissing mud-colored coffee, and then, while your miserable, over-worked old stomach is calling for all the disposable nervous energy of your system to help it drudge in its tyrant's task, jump headlong back into you dark, close counting-room, and demand that same nervous energy from the same source to engineer your brains and eyes in the absorbing exertion of making money? Ignoramus, how dare you?

Well, poor fellow, it's of no use to scold at you, after all. Pity is much more appropriate to your sad case. Who would be such a juiceless, dirt-complexioned, dried-up husk, for all your money, or all everybody's else? It is but a maimed soul and a deformed body that you have acquired under that regimen. And when your old, cracked, shaky constitution quite breaks up, and you die prematurely—wretched man, who knows what miserable fate you will have incurred by your years of sit-still money-grubbing, and this intensified course of mad aggravations with unchewed meat-chunks and hot grease and drink all ablaze? [Life Illustrated.

SIR William Temple has observed that the love of gardens is the only passion which augments with age, and adds, that all men eat fruit who can get it; so that the choice is only whether one will eat good or bad; and all things produced in a garden, whether of salads or fruits, a poor man will eat better who has a garden of his own, than a rich man who has none.

LOOK ON THE BRIGHTEST SIDE.

BY N. STONE,

Old man, I prithee tell me why
You always wear a smile,
Though others oft look wan and sad;
How do you care beguile?
Though doomed to toil and penury,
And bowing down with age;
Yet still light-hearted, blithe and gay
You tread life's weary stage.

I'll tell thee all, my youthful friend,
The good old man replied;
Whate'er may hap I always look
Upon the brightest side.
O'er all the land there's not a man,
How hard soe'er his lot,
But if he will, can often find
A bright and sunny spot.

DO GOOD.

Do good, whilst here on earth you dwell;
'Twill meet a sure reward;
The angel harps each deed will tell,
And God the pay award.

What though nor fame nor fortune fall,
Nor loud acclaim of men;
That God whose eye is over all
Each noble act will ken.

Is it not great, when, from the heart,
A kindness doth proceed,
Which doth at once a joy impart,
To him who hath your need?

Then, when you can, to sorrow's call,
The drooping heart elate,
Rememb'ring though the cost is small,
ALL KINDLY DEEDS ARE GREAT.

PROFANE WORDS.

As polished steel receives a stain
From drops at random flung,
So does the Child—when words profane
Drop from a parent's tongue.
The rust eats in, and oft we find
That nought which we can do,
To cleanse the metal *or* the mind,
The brightness will renew.

A ROBBER'S REMORSE.—Somebody once robbed the poet Montgomery of an inkstand, presented to him by the ladies of Sheffield. The public execration was so loud, that the thief restored the booty with the following note:

"BIRMINGHAM, March, 1812.

Honored Sir: When we robbed your house we did not know that you wrote such beautiful verses as you do. I remember my mother told some of them to me when I was a boy. I found what house we robbed by the writing on the inkstand. Honored sir, I send it back. It was my share of the booty, and I hope you and God will forgive me."

A SMOOTH sea never made a skillful mariner. Neither uninterrupted prosperity or success will qualify a man for usefulness or happiness. The storms of adversity, like the storms of the ocean, rouse the faculties, and excite the invention, produce the skill and fortitude of the voyager.

Cordage Manufactory.

WE now have our ROPE WALK in operation, and are manufacturing CORDAGE of the best quality from **Pure Hemp, direct from Manila,** and have constantly on hand MANILA ROPE OF ALL SIZES; Also, BALE ROPE and WHALE LINE.

v7-8 3m TUBBS & CO., 139 Front street

PHALON'S

CHEMICAL HAIR INVIGORATOR.

The most complete article of the kind ever before offered to the public. It has stood the test of twenty years in this county, and not one of the many hundreds of imitations have been able to compete with it for preserving, dressing, and beautifying the hair, and keeping the head clear from dandruff, &c. It is inestimable; in short it is everything the hair requires. Price, 50 cents and $1.

PHALON'S PAPHIAN LOTION, OR FLORAL BEAUTIFIER.

A great cosmetic for beautifying the skin and complexion, and for curing chapped hands, face, lips, tan, sunburn, freckles, pimples, scalds, burns, &c. A sure and safe cure for the piles—one washing will give instant relief. After shaving, it is very soothing to the skin. It keeps the hands soft and white, and for inflammations of the skin it will be found to be a great remedy. Price, One Dollar per bottle. Made and sold by E. PHALON.

PHALON'S MAGIC HAIR DYE.

One of the very best natural dyes in the world. Its long use has proved it to be beyond comparison; and being a vegetable production, no injury can possibly be done to the skin. It is easily applied, and you can obtain a black or a brown which will defy the best judges to tell it from nature itself. Price $1 and $1 50 per box. Made and sold by E. PHALON, at 197 Broadway, corner of Dey street, and 517 Broadway, St. Nicholas Hotel, New York, and all Druggists and Fancy Stores throughout the United States.

BOOKS, &c.

The Fruit Garden.
By P. BARRY,
Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, THE VILLA, THE MANSION AND COTTAGE. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express*

Copies of either of these books sent by mail (post-paid), for $2, remitted to CHARLES SCRIBNER,
v7-8 3m 377 and 379 Broadway, New York

Valuable Works

The Most Successful and the Best.
NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.
BY EPES SARGENT, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

SARGENT'S STANDARD SPELLER contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

Rural Publications.

THE COUNTRY GENTLEMAN—Weekly—a Journal for the Farm, the Garden and the Fireside. New Volumes commence the first of January and July—each number consisting of Sixteen Large Quarto Pages. Two Dollars per annum. "Without question the BEST Agricultural Paper in the United States!" "By far, at the head of the Agricultural Journals of the United States."

THE CULTIVATOR—Monthly—a Magazine of thirty-two octavo pages, now in its twenty-third year, and to commence with January, the Fourth Volume of its Third Series. It is now "made up" from the Country Gentleman, and though furnished at the low price of Fifty Cents a year, continues to maintain the rank it has ever held as the most Practical Farmer's Paper, and the ablest scientific authority in its peculiar sphere.

THE ILLUSTRATED ANNUAL REGISTER OF RURAL AFFAIRS—An annual volume of 144 pp., duodecimo—illustrated with 150 engravings. Number Three, for 1857, just issued, is even superior to its predecessors, and like them, forms a convenient repertory of more practical information, interesting to every country resident, than can elsewhere be obtained at four times the cost. Price Twenty-five Cents. Nos. 1 and 2, for 1855 and 1856, same price. Per Dozen, $2, sent post paid.

SPECIMEN NUMBERS

Of the Cultivator and Country Gentlemen are freely supplied to all applicants. We will send a copy of the Register to any one wishing to make use of it to procure subscriptions, on being informed to that effect. Address all letters of inquiry, or orders accompanied by the cash, to LUTHER TUCKER & SON, Albany, N. Y.

☞ Subscriptions for any of the above works received at the offices of the FARMER and forwarded v7-2 tf

The California Farmer.

SAN FRANCISCO, FRIDAY, JUNE 19, 1857.

Letters and Exchanges.

Our correspondents are kindly requested to direct all letters to us at our principal office, San Francisco.

Those journals and periodicals with whom we exchange will much oblige us if they will be particular to note this, so that we may be in receipt of their favors at the earliest date. Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco.

The Crops.

Every valley is now alive with the song of the harvesters, and generally *that* is a merry one; and it denotes a satisfactory harvest, "in spite of my Lord the Cardinal." (That means the croakers for short crops.)

Who can longer doubt that we shall have an abundance? The immense breadth of land cultivated the present year, denotes this. If the speculators had desired to know how much land was cultivated in grain, they could have taken a page from the sales book of those who sell plows, this would have opened their eyes. *We* noticed the busy shop of the Plow Makers, and their name is legion. We knew that all over the State hundreds and thousands more of plows were made this year by our own workmen than last year, and if they had visited the importers of plows, they would have learned that thousands of plows had been sold the present year over the last, and this was an indication surely of the increased breadth of land under cultivation.

But, there is no longer doubt of a crop sufficient for all our wants, and enough to spare.

Large shipments of barley have already gone to New York, some eighty thousand sacks, and more will continue to go, for it will pay well. The advices from the East show this, and the value in Europe is also an indication that it is wanted there.

By last accounts from Europe, some fears are entertained of short crops there, and the price was advancing; all these circumstances are in favor of California, for we can raise and sell wheat as cheap as any State in the Union if we please, for if we properly cultivate, we can raise three or four times the crop of any other State, and the present year will show some crops of forty, fifty, sixty, and even more than *sixty bushels* per acre, and of barley, a *hundred bushels*—does this look like a scarcity?

Let then all cultivators give their attention to the proper methods of cultivation for California, let them learn of the seasons, climate, soil, time and manner of planting, and in three years from this, in the year of Our Lord, 1860, the eyes of Europe shall look to California as the *granary of the world*, for her valleys and hill tops shall gleam with fields of golden grain.

More Valuable Stock.—By the last steamer a fine lot of very valuable stock arrived. Among them were four very fine bulls, imported by L. Stone Esq., of Colusi. Mr. Stone has done this State great service by introducing this valuable lot of Durham stock. A fine lot of superior Merino sheep have also been imported by Samuel Brannan, Esq., and at high cost; but in no way can wealthy men invest their money better, for if it "don't pay" them, it will serve the State and benefit the masses, and *this* pays. These two importations, added to the fine horses imported last steamer, and the stock introduced here by Col. Henly, of which we have before spoken, will add much to the wealth of our State. We learn also that a fine lot of sheep were received by steamer for San José; and some winged stock, being fourteen hives of bees, by Mr. Gates. If Stock raisers would but reflect that the *best* stock can be raised as cheap, nay *cheaper*, than poor stock, we should not see the miserable varieties that now are a disgrace to any stock raiser, in so fine a climate as ours. When we look at the long horns, gaunt bodies, and unwieldy limbs of the Spanish cattle, and contrast them with the sleek Devon, the beautifully formed Durham, and the domestic Ayrshire, we wonder any dairyman will still retain poor stock. We would also advise the importation of the Alderney and Holderness stock. When we look upon the long snouted hogs, and their lean sides, we wonder any farmer can permit them on his land, unless it may be they have no *subsoil* plow. It is true that if the land was mellow, one of these rooters would do as well as a subsoiler; but the farmer that keeps such stock is generally behind the age. He would not be in favor of improvements. He knows as little of subsoilers, deep tillers, or sward plows, as he does of the Berkshire, China or Suffolk breed of hogs. But we hope a better day is coming in all departments of stock raising.

Heavy Grain.

We received some very extra heads of the *seven headed wheat* from James Burney, Esq., which planted very late and on low land, has produced very superior heads, samples of which can be seen at our office.

We recived a collection of very heavy heads of barley, from the fields of F. C. Coggshall, Esq., on the San Pablo road, some two miles from Oakland. The yield promises seventy-five to eighty bushels per acre.

From Wm. O'Donnell, a sheaf of very superior wheat. Mr. O'Donnell informs us he plowed deep, and plowed twice; the grain was planted in January early, and gives promise of a heavy yield—this sheaf is worth looking at.

For all these our thanks.

Chance for a Wagon Maker.—One of our correspondents writes us saying there is a good chance for a good industrious workman of this kind in his vicinity. The letter can be seen at our office for particulars.

Beautiful Sacramento.

The one great cause of the striking beauty of Sacramento, as a city, arises from the fact that those who reside there take a pleasure and a pride in beautifying their homes. The main streets where the residences are found—Second, Third, and Fourth, G, H. I, and all "up town," the city is truly beautiful; made so by elegant residences, mansions—many of them rich and stately—cottages and homes; all reflecting great credit upon their owners, and upon the city.

In many of the streets, rows of tall and heavily branching trees entirely shade the houses, and give a beautiful appearance to the street, to the houses, and to the city.

Many fine mansions have been recently erected, and we would speak of some more particularly; but we desire to visit each, and view the grounds, and speak understandingly, and to this future description we must defer further remarks, other than to say, let other citizens copy the example of Sacramento, if they would have beautiful homes. Yes, "beautify home" should be the watchword of every good citizen of California.

Error About State Fair.

The following notice we clip from a recent issue of the Sacramento Union, and very much regret that a journal, so usually correct in all matters of general interest, should commit so great an error. The Committee to which they allude was the Visiting Committee of the State Society, but they were of the Board of Trustees also, who are now only visiting Yuba and other counties as an Examining Committe on farms, gardens, nurseries, &c. The State Fair, the present year, will be holden at Stockton, *not* Marysville, and we trust to see a wide-spread interest in its behalf. The Committees and all the Executive Board are gentlemen of large experience, and are engaged in this work with an enthusiasm that is cheering, for it denotes success. Every county society should awake to life anew; and every farmer, gardener, ranch owner and stock-raiser should give heed to the call for his aid and countenance to the coming State Fair. Stockton will do herself credit this year we feel confident. The following is the article alluded to:

The State Fair.—The next State Fair is to be held at Marysville, at which place the committee on ranches and orchards assembled on Thursday, to make arrangements for extending their visits of inspection among the surrounding farmers.

Criticism and the Bulletin.

Reformers claim to act from a noble motive—the reformation of those they rebuke. But, alas, they often forget that the true spirit of the reformer is only manifested in gentle and kind words, and in reproofs conveyed by smiles, rather than frowns.

The beloved disciple of Him "who spake as never man spake," was rebuked, reproved and saved, not by bitter and severe rebuke, nor by uncalled for censure; but by kindness, gentleness and human sympathy: and when that disciple would have called down "fire from heaven" to destroy those who opposed *his* wishes, these words were said to him: "Ye know not what manner of spirit ye are of."

For three years and a-half, while issuing our journal, we have never gone out of our way to attack any journal, or criticise or censure. Our duty was to build up, not pull down; and if any of our cotemporaries saw fit to attack us or find fault with our course, or the writing of our correspondents; if other journals saw fit to be harsh upon us or them, our answer has been and ever will be—"we have no types in the California Farmer Office to spell hard words."

The Bulletin has seen fit to criticize and to doubt the authenticity or the originality of "Florence Percey's" writing, and to *attempt* ridicule upon the writer and the journal in which they appeared. While the Bulletin shall continue to attack politicians and office holders, and those of the sterner sex, or grapple with matters of that character, we say amen! and will be silent; but when it seems to go far out of its way to wound defenceless woman, or strike down those who struggle to rise by the effort of mind, we shall deplore such a course. We believe this present attack did not originate with the Bulletin, and therefore we have charity enough to hope the error will be atoned for.

Florence Percey does not need our pen to prove she is capable of writing. She *can* speak, and *has* spoken, and *will* speak, in spite of such attacks. The Farmer will have, and hopes long to have, the pleasure and honor of encouraging, by kind gentle words, rather than harsh rebukes, many who will speak through its columns. Our motto is—

"Go gladly with true sympathy,
Where sorrow's victims pine,
And bid life's sweetest smiles again
Along their pathway shine."

A Word from Siskiyou County.

McAdams Creek, Siskiyou county, June 7, 1857.

Friend Farmer: Thinking that you would like to have me send you a little money I take this present time of doing so. I am going to send you some dust, which I expect will do as well as the coin. Your paper is looked for by the boys, and read with as much interest as any paper we get, and the cabin I stop in gets about seven papers a week, when they come regularly. No more at this time. Yours, &c., E. S.

[We must give the above pretty note. It tells. Yes send us *gold dust*—or coin. Either—so you send it as kindly as the above. We wish all were in this mood—and all take the Farmer. Come along with your gold dust, and we are pleased, and will try to make you pleased also. Ed.]

Literary Notices.

Arctic Adventures by Sea and Land, from the earliest date to the last expedition in search of Sir John Franklin; edited by Epes Sargent. Boston: Philipps, Sampson & Co. The work before us is a complete Cyclopedia of Arctic adventure, and contains correct accounts of the voyages of every arctic explorer, from the days of Davis, Hudson, Baffin and Behring, down to the latest voyage of the deeply lamented Kane. The deep interest which has of late been manifested in this subject, has called forth this work, and it should be carefully examined. The maps and illustrations are very well executed, and the typographical appearance of the work is quite commendable. Future allusion will be made to the work.

Neighbor Jackwood—A domestic drama, in five acts, by J. T. Trowbridge, author of Neighbor Jackwood, &c., has just been received from the above publishers.

Hooper's Western Fruit Book—By E. J. Hooper, Member of the Cincinnati Horticultural Society, and formerly editor of the Western Farmer and Gardener—Published by Moore, Wilstach, Keyes & Co., Cincinnati, Ohio. This work, as indicated by the title page, is a compendious collection of facts, from the notes and experience of successful fruit culturists, arranged for practical use in the orchard and garden. The volume contains four colored plates: Yellow Belleflower, Bartlett Pear, Rodman's Red Cling (peach), and McAvoy's Superior Strawberry. A work of this kind has long been desired, and it will be found convenient, thorough, and accurate; adapted for daily field use, and containing lists of such fruits as are well established and acceptable to the western fruit grower. It contains, also, articles upon the appropriate location, soil, and treatment of fruit trees, with hints upon the selection of trees from the nursery.

New Biographies of Illustrious Men—By Thomas Babington Macaulay, Henry Rogers, Theodore Martin and others. Published by Whittemore, Niles & Hall, Boston. The contents of this volume have been collected from the eighth edition of the Encyclopedia Brittanica, which is now passing through the press, the magnitude of which places it beyond the reach of most persons. The biographies in the present volume are condensed, giving a distinct outline of the life, and a clear impression of the character, without sacrificing any essential feature; and placing them within the reach of those who cannot peruse more voluminous memoirs. The work comprises memoirs of Addison, Atterbury, Howard, Bunyan, Sir John Franklin, Homer, Goldsmith, Johnson, David, Hume and others.

Poems—By Charles Swain. Boston: Whittemore, Niles & Hall. This selection of Poems has been partly made by the author, and embraces, in addition to the best poems, previously published in England in different volumes, several pieces which are now printed for the first time, and which have not before been collected. This charming little volume is published in blue and gold, and is worthy a place in every library. We have previously spoken of its merits, and may refer to it again.

The Old Farm and the New Farm—A political allegory, by Francis Hopkinson, member of the Continental Congress, with an introduction and historical notes, by Benson J. Lossing, M. A., author of the Pictorial Field-Book of the Revolution, &c. Published by Dana & Co. Broadway, New York. The above story was written by a Revolutionary Patriot, more than eighty years ago. It tells, in a striking manner, of what filled the minds and hearts of all American citizens at that time; and is plain common sense, as well as the honest truth. It is published in antique style of printing, and though brief, is full of hints and observations, containing an outline of the causes that kindled the old war for independence. "It was written in the year of our Lord 1774, by Peter Grievons, Esq., A. B. C. D. E.." and the reader will find it quite amusing and instructive. [A few copies can be had at our office.]

Men and Times of the Revolution—or Memoirs of Elkanah Watson, including his Journals of Travel in Europe and America, from the year 1777 to 1842, and his Correspondence with public men, and Reminiscences and Incidents of the American Revolution; edited by his son, Winslow C. Watson; with a portrait of the author, engraved on steel, after the famous portrait by Copley, and twenty wood engravings. Published by Dana & Co., New York. Octavo, 460 pages, $1 50. Mr. Watson has contributed a most valuable and interesting work to the literature of the Revolution, and it must be universally welcomed by the public. The first seventy pages comprise deeply interesting reminiscences of the early life of Mr. Watson, giving the minute details of his experience and observations in his travel on horseback, from Connecticut to South Carolina and back, immediately after the commencement of the revolutionary war. More than half the memoirs are an autobiography; the rest has been compiled from the correspondence, manuscript, &c. of the deceased. His travels and extensive acquaintance with all classes of people, from the revolution until a very recent period, make up a volume of great interest; and his impressions of men and events render it not only instructive, but a most important acquisition to our sources of national history. The publishers deserve much credit for bringing such a valuable work before the public. We shall take occasion to review the work at length, after a closer examination of its pages.

New Books Just Received.

Peace: or the Stolen Will—By Mary W. Janvrin. James French & Co. publishers, Boston, 1 vol. 12 mo., 408 p. This new volume will add greatly to the popularity of the above well known authoress. The work has been some time in preparation, and is said to possess great dramatic power. It is pronounced to be one of the best works offered to the public, and will have a wide and extensive sale.

An American Merchant in Europe, Asia, and Australia—A series of letters from Java, Singapore, China, Bengal, Egypt, the Holy Land, the Crimea and its battle grounds, England, Melbourne, Sydney, &c.; by Geo. Francis Train of Boston; with an introduction by Freeman Hunt, A. M., editor of Merchants' Magazine, etc. Published by G. P. Putnam & Co., New York.

Irving's Sketch Book—By Washington Irving.

Tales of a Traveler—By Washington Irving.

Salmagundi; or The Whim—Whims and opinions of Launcelot Langstaff, Esq., and others.

The above works are each complete in one volume, and belong to the series known as Putnam's Railway, and are published by G. P. Putnam & Co., New York.

New Music.

Wm. Hall & Son, Broadway, New York, have just published the following New Music:

My Greenwood Home—Sung by Christy & Wood's Minstrel's. Words by Henry Wood. Music by C. W. H. Griffin.

The Lilac at the Door—song; written and composed by Wm. J. Wetmore, M. D.

Kitty O. Neal—an Irish Ballad; words by R. B. Buckley; composed by J. R. Thomas.

Anna Maria Jones—comic song and chorus; sung at Buckley's Opera House; composed by Walter Meadows.

Where is Home—ballad; as sung by R. B. Buckley; composed by J. R. Thomas.

Delhi Mazourka—composed by O. T. Jacobson.

The Lovers' Letter Box—Schottische; composed by H. A. Wollenhaught; splendid colored title page.

The above popular music can be found at all the principal music stores in California.

Received from Horace Waters, New York, the following new pieces, which will be found worthy the attention of the ladies:

Leaves from the Opera—by J. H. Koppes.

Franklin College Schottische—dedicated to the Graduating Class of 1857; by a member.

Silver Bell Schottische—composed for the pianoforte, by Augustus Cull.

The Charter Oak—song and chorus, for the piano or the melodeon; by H. D. Munson.

Somebody's Waiting for Somebody—song; by O. Atherton. A very popular song.

Rainy and Rough is the day.
There's a heart waiting for somebody.

Acknowledgments—To Dr. H. Dadd, V. S. for two large plates, representing the "Horse's Age, as shown by the Teeth," showing the teeth at different ages, in twelve lithographed figures, handsomely executed.

Also, the "Brain of the Horse, enlarged," in two distinct forms.

These valuable plates can be seen at our office.

—Catalogue and Sale of Stock, June, 1856, from L. G. Morris, Esq., giving purchaser's names and residences, with full list of animals and prices attached. Total amount of sales, $19,379.

—C. S. Wainwright, Esq., Rhinebeck, N. Y.; Catalogue of Sale, of fine Devon stock, to be sold June 17, 1851. This is Mr. W.'s first public sale, and the stock being the best in America, will call out the best breeders from all parts of the country. We regret not receiving catalogue in time to give notice to those who would have sent on orders.

Specimens of Wool—From Geo. Campbell, Westminster, Vt., twelve samples, from Spanish Ewes; flock numbering some 300 head, average a fraction over 7 pounds 13 ounces per head. 200 would average over 8 pounds. Engraving of this breed of sheep will appear in the Farmer soon.

From Robert W. Scott, Esq., near Frankfort, Ky.,—specimens of Wool from "Improved Kentucky Sheep." These can be seen at the office of the Farmer, and we would invite all Breeders to call and see our samples, just received from the East. (See advertisement of Mr. R. W. Scott, in our columns.)

Favors.—We certainly desire to present our kindest thanks to those friends who remember us in their labors, and send us evidences of their success.

That splendid Melon from Stanislaus, the first of the season, of which we have spoken in another column, and the large Gooseberries from "Eden;" these, with the Raspberries and Strawberries, make a feast reasonable for the connoisseur.

The superb Strawberries from Messrs. Wolf, Lusk & Co.'s Gardens at Oakland, surpass, in size and beauty, our conception of possibilities in fruit growing. Many of the berries measured 5 and 5¼ inches, and a few approximated 6 inches. This firm cultivate 18 acres of Strawberries.

We have received by the steamer from the East, from several of the stock raisers, samples of splendid Wool; also, samples of the fleeces of the Cashmere Goat, with data. These we shall arrange to exhibit to growers, and speak more fully in our next. The seed of the Victoria Regia has also come safely to hand, and with plates of this magnificent flower—[we have a few copies of this work for sale]. These were all forwarded us by our associate editor. Full particulars hereafter.

While we return thanks, we say to all, send your samples in every department. What we cannot eat we will lay away.

Tar Water as combined with other simples, by Dr. Wistar in his celebrated Balsam of Wild Cherry, has a peculiar power over all diseases of the lungs. Many physicians have used it in their practice, and generally with marked success. None genuine unless signed I. Butts on the wrapper.

Stroll Across the Bay.

Stealing away from the chilling winds of the city, we took saddle and crossed over in the fine steam ferry-boat to Contra Costa, to visit some of the strawberry gardens on that side of the bay. We are often obliged to the clerk of this boat for kindness and attention in passing, and also to our friend Smith. We were refreshed with a sample of his sparkling catawba. Longworth's fame speaks in that, and it can always be found at Meekers, on Front street. We had a very pleasant ride around Brooklyn, visiting the gardens of Judge Walker, Mr. Lacy, Mr. Bailey, Gov. Foot, Mr. Patten, Mr. Blitz, and Mr. Bliss. At the garden of Mr. Bailey we saw the famed Giant Rhubarb, from Wisconsin, and we are indebted to that gentleman for three very fine stalks of it, weighing three and a quarter pounds, and (though young and the first year) the circumference was six inches. It is the largest and finest ever grown in California.

We were at home at the residence of O. H. Bliss, Esq., called "Heath Dale." This is one of the very prettiest spots on that side of the bay. Beautifully sequestered and surrounded by large and majestic evergeen oaks, and shaded by fruit and ornamental trees, and handsomely designed and planted with flowers, it is indeed one of the brightest homes we have seen. In the garden we noticed Louisiana Cotton growing; trees of extra growth, peach, pear, plum, and cherry; several plum, of the Coe's golden drop, very beautiful; trees of the fig and almond; also, a collection of gooseberries, rarely equaled; twenty-five pounds were gathered from a few bushes recently which sold for ten dollars. It was from this garden that we received the fine gooseberries recently noticed, and as not knowing the donor at the time they were left. The pear trees were well laden with pears of large size: the Bartlett, Beurre d'Aremburg, Seckel, Louis Bonne d'Jersey. The whole design of these grounds and form of this spot are winning. Nature originally designed it beautiful, and art has enhanced its original beauty. While here we met Mr. Aldrich, on his rounds with his gopher trap. We saw him set it and prove its success by "nabbing" these troublesome depredators; we can therefore call the attention of all to this simple and ingenious trap. They will be found at our office on exhibition and sale. When the day closed and its duties were done, we enjoyed the courtesies of the happy home of our friend, and to Mr. and Mrs. Bliss were indebted for much kindness and hospitality.

We next visited the fine farm and nursery of W. R. Richardson, Esq., and found him shearing a fine lot of sheep, of which we took notes as follows: From one South Down the present fleece was ten pounds; from one Merino buck ten and a half pounds; from a half-breed (a cross of the South Down by a flat-tailed sheep), a year old ewe that had had lambs, a fine fleece of six pounds. We saw a yearling of the flat-tailed sheep, very fat, that weighed, after shearing, 145 pounds. We were agreeably surprised at such fleeces, although these are but the evidences of what we have before asserted relative to the results of sheep raising. We were pleased by a visit to the nursery of Mr. R., where we found well grown and very healthy trees, giving good promise for the coming season of sale. Several trees, of various kinds, had made three and a half and four feet growth the present season. The orchard and nursery contain thirty-six varieties of apple, forty-nine of pear, twenty-five of peach, twenty of cherry, and twelve of plum and nectarin, etc. The location is a pleasant one, and reflects credit on Mr. R. for his care and skill.

From thence we rode to the San Pablo road, to the strawberry grounds of Messrs. Wolf, Lusk & Co. Here we had opportunity to examine the growing of eighteen acres of this delicious fruit. Their grounds are under the highest state of cultivation, and were yielding the present week very heavily.

The first three days they picked and sent to market 800 pounds fruit, and would probably send 600 more during the week. We learn that they rank the vines they cultivate as follows: British Queen, No. 1, are always bearers. The Hovey rank No. 2; but if rightly cultivated and with good impregnators, would excel all others. Longworth's Prolific, No. 3. After first fruiting they make runners, and are slow to come into fruit again. We judge from the character of the vines that it were much better to keep off the runners.

Messrs. W. L. & Co. have contrived a plan of watering, entirely new. They have, on very broad wheels, a large cask with two spouts, and this they drive between the rows and thus water freely two rows at once. We saw them watering at mid day and we feel anxious to know the result.

We were completely choked off from finding fault with his mid-day watering, by the large strawberries, which we were unwillingly(?) obliged to swallow. However, we have lived over it; we are glad to see success attend such earnest laborers as Messrs. Wolf, Lusk & Co.; for our luscious entertainment we were grateful.

Called at the garden of Mr. John Smith, and think we have found the very real John Smith now, for they say John Smith is a wonderful man, and his strawberries are so large, it requires a knife and fork to eat them. Mr. Smith is very successful. From Mr. Smith to Mr. Bogge's, who grows vegetables admirably, and to Captains Reed, Daily, Schander, at each place we found pleasant garden spots, kind friends, refreshing calls, and then called at Messrs. White & Kelsey's, who fill our market daily with raspberries. Messrs. White & Kelsey have four acres in raspberries, and three in strawberries, and their crop large and fine. They have sent out one hundred to one hundred and fifty boxes per day, and obtain good prices. We enjoyed a feast from the vines and then again in the house, and thus refreshed doubly, in seeing them grow and enjoying the fruit, we took leave of our friends giving all our thanks, and came again to our sanctum.

Educational

A Public Examination was had at the Benicia Institute for boys, under the charge of C. J. Flatt, Esq., on the 11th and 12th inst.

The Examination was one of general interest; about thirty youths were in attendance upon the institute at the last term, and on the day of Examination an unusual interest was manifest and the large hall was filled with guests.

In addition to common English branches they are taught French, Mathematics, Natural Philosophy, History, Algebra, Geometry; these with Music and Compositions form the studies of the Institute.

The whole Examination was one of honor, reflecting credit upon teachers and pupils.

The Institute is under the sole charge of C. J. Flatt, Esq., who with his accomplished lady and associate teachers, form the cordon around which these youths cluster, and the advantages found here are beyond that of any school or academy in the State. As an evidence of the health of this vicinity, we can mention that no case of sickness has occurred at this Institute for the five months; this is guarantee sufficient.

We noticed in this schoolhouse the Boston desk, an excellent article, and we believe are the only specimens in the State. They are made of black walnut, highly polished, and give to the pupil an easy and very desirable attitude.

Mr. Flatt deserves well of the State for his efforts in behalf of the cause of Education, and we feel that parents should know of this Institute and its advantages.

SPECIAL NOTICES.

☞ **Scrofula and Diseased Blood.**—"DR. GUYSOTT'S improved Extract of Yellow Dock and Sarsaparilla" is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say, "Try it." It revives the drooping constitution, eradicates all humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine, it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system stands preëminently above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor restored through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of other Sarsaparilla compounds.

☞ Be careful and buy none but QUART BOTTLES. Sold by Druggists generally.

PARK & WHITE, General Agents, and importers for all valuable Patents Medicines, 132 Washington street, San Francisco. v7-22

☞ **WHAT CHEER HOUSE,**
MAY 27TH, 1857.

CITY AND COUNTY OF SAN FRANCISCO, } ss.
State of California. }

KNOW all People by these presents that R. B. WOODWARD, Proprietor of the above named establishment, hereby announces that from and after this date his scale of prices shall be as following reduced rates to wit:

BOARD, Per Week, SIX DOLLARS.
BOARD, Per Day, ONE DOLLAR.
MEALS, FIFTY CENTS Each.
LODGINGS, Per Night, FIFTY AND SEVENTY-FIVE CTS.

French Patent Spring Beds, with best of Curled Hair Mattresses, Clean Bedding, &c., has gained a lasting and world-wide notoriety for the superior and celebrated Lodgings to be had at the What Cheer House.

In addition to the above, there is also a spacious Reading Room (well supplied with papers from all parts) in connection with the extensive Library of over two thousand volumes of the choicest selection of standard works.

Determined and untiring efforts to please and furnish the very best of fare at the lowest prices, backed up by a rigid adherence to the cash system, has made the What Cheer House the best and most popular establishment on the Pacific Coast, for which the public will please to accept the thanks of

R. B. WOODWARD, Proprietor.

Fine, beautiful hair—jet black or brown;
Or tresses, curling and golden—
Is the certain result—without chance or doubt—
Of the use of LYON'S KATHAIRON.

The immense sale of **LYON'S KATHAIRON**—nearly 1,000,000 bottles per year—proves its excellence and universal popularity. It restores the Hair after it has fallen out, invigorates and beautifies it—making it soft, curly and glossy—cleanses it from all Scurf and Dandruff, and imparts to it a delightful perfume. The Ladies universally pronounce it the finest and most agreeable article ever used. Sold by all dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
53 Liberty street, New York.
PARK & WHITE, Wholesale Dealers, San Francisco. 20-1m

☞ **RATS—ROACHES—BED BUGS, &c.**—The *London Quarterly Review*, the *New York Daily State Register*, and others on "COSTAR'S" Rat, Roach, &c., EXTERMINATOR, "COSTAR'S" Bed Bug EXTERMINATOR, "COSTAR'S" ELECTRIC POWDER, for Ants, &c.

The London Quarterly Review contains near a column, and the New York Daily State Register, of April 27th, says: "The French Government does not permit rats to be killed in any other manner except by 'Costar's Rat Exterminator,' which is sold (in this city) at No. 388 Broadway;" and again, in issue of May 1st: "No judicious housekeeper should defer purchasing a supply of this invaluable remedy for clearing their houses of all kinds of vermin. With all confidence we can recommend it as an indispensable article for every family."

The New York Journal, for April, has the following: "'Costar's' Remedies for all domestic pests, such as Rats, Cockroaches, Bed Bugs, Ants, Fleas, &c., are said to be invaluable; and we can speak from actual knowledge of their rare merit. The name of 'Costar' is a 'household word' to New Yorkers, and his Depot, No. 388 Broadway, is thronged by customers daily. As the summer approaches we advise every one who would be rid of the above named pests, to send and procure a timely supply of the *Exterminator*. Druggists and dealers also should send their orders early if they would secure a trade in articles for which there is a *constant demand*, and on which a fair profit may be realized."

☞ See advertisement in another column. v7-20 3m

☞ **OXYGENATED BITTERS**—*A Sure Cure for Dyspepsia*—The history of this remarkable medicine, and its unbounded success in obstinate cases of DYSPEPSIA, ASTHMA AND GENERAL DEBILITY OF THE SYSTEM, places it among the most wonderful discoveries in medical science of the age. It has given it a reputation far beyond any remedy known to the public, in all their various forms.

The *Oxygenated Bitters* contain nothing which can injure, and the medicine has no similarity whatever to the various alcoholic mixtures disguised as "Bitters," being purely a medicinal compound, in which are combined the most valuable remedial agents, and a peculiar oxygenated property, hitherto unknown, but highly efficacious in all complaints arising from weakness and derangement, or prostration of the nervous and system generally. It is a mild and agreeable tonic, removing all disagreeable symptoms, and assisting nature in her efforts to restore the impaired powers of the system.

Sold by W. Fowle & Co., 123 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. McALLE, cor. Third and K sts., Sacramento; Jansen & Co., Washington st., San Francisco. 20-1m

SPECIAL NOTICES.

☞ **THE EDITOR'S CARD.**—We would ask an especial favor of our friends in every county—we want their aid in a plan which we trust will do our State some service, and make her character and resources better known. Will our Grain growers and Haymakers aid us? Will our Farmers aid us? Will our Miners, Mechanics, Manufacturers, and all other friends of the industry of our State aid us? The following is our plan and these are our wants:

We want a collection of Grain from every county in the State, both in the sheaf and in the grain; we desire the best specimens of every county, and of every farm, if we can have them—a sheaf of a hundred and fifty heads, and full length of the straw; also about one quart of the same grain, cleaned. We want Barley, Wheat and Oats, and all new species of Grains and Grasses. We would like rare specimens of Vegetables in their seasons, and Fruits; specimens of Minerals, petrified Acorns, or Seed of Trees, or whatever is curious. The object of such articles, especially the grain and products of the soil, as well as all others, is to have them shown at the different Exhibitions of the States, and in Europe, that the character, productions and resources of California may be truly known, and thus induce an emigration of the right character.

As this object is one of a public nature, and intended to accomplish a great public benefit, we shall hope our friends will aid us in this enterprise. We shall keep a record of every contribution, and their kindness will be remembered, and their donations made known abroad as well as at home. All who are pleased to respond to our call, will please pack Grains and Grasses carefully in boxes, so as to preserve the grains perfect, and let them be so far ripe as not to mold—but not too ripe; other supplies can come in bags or boxes. Forward by Express, and we will cheerfully pay all charges on boxes, etc., and quickly acknowledge receipt of same through our journal, and with our grateful thanks to those who aid us in this enterprise. Direct to our Office, at San Francisco. v7-23 if

☞ **JOSEPH GILLOTT'S STEEL PENS.**—These popular Pens are to be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Thirty years' experience in the manufacture will, it is hoped, be a sufficient guarantee that every effort will be made to maintain the reputation of these articles. Those of *Standard Quality*, only, are allowed to issue from the Manufactory.

Each box contains a warrant, bearing a *fac simile* of Joseph Gillott's signature.

LINDSEY'S
Double Acting Rotary Force Pump.

THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.

It must stand in the water, and will not rust.

Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.

JAMES M. EDNEY,
56 John street, New York City.

Works of an Abiding National Interest,
PUBLISHED BY
DANIEL DANA, JR.,
381 Broadway, New York.

MEN AND TIMES OF THE REVOLUTION; or, Memoirs of Elkanah Watson: including Journals of Travels in Europe and America, from 1777 to 1842, with his Correspondence with Public Men, and Reminiscences and Incidents of the Revolution. Edited by his son, Winslow C. Watson.

SECOND EDITION: With a copious Index, a Portrait of the Author, engraved on Steel, after the famous portrait by Copley; and twenty fine Wood Engravings. 12mo., 576 pages, on tinted paper, $1 50.

[From the Knickerbocker, Monthly Magazine.]

"This work rolls back the tide of years, and almost places the reader in the very shoes of the writer. It is a volume of wonderful interest, not only from the deeds and events recorded, but from the admirably graphic and simple manner in which they are presented."

[From the Newark Daily Advertiser.]

"Were this fiction it would be considered most entertaining reading; as fact, its interest surely cannot be less."

THE OLD FARM AND THE NEW FARM: A Political Allegory. First published under the title of "A Pretty Story." By Francis Hopkinson, a member of the Continental Congress. With an Introduction, Historical Notes and Illustrations, by Benson J. Lossing, M. A., author of "The Pictorial Field-Book of the Revolution," &c.

"This allegory is one of the happiest efforts of the greatest wit of the Revolution. It explains, by means of striking pictures of real life, the causes of the war, and thus powerfully appeals to the common sense of all men."—[Publisher's Circle.

"It is an admirable political tract of the true stamp."—[New Orleans Picayune. v7-23 3mis

Fine Blooded Stock.

THE Subscriber has been engaged for about twenty five years in rearing fine blooded stock of all sorts, on the same farm, and for life; and few, if any, breeders have been more careful or more successful. My stock registers (long and carefully kept) numerous silver premiums, and constant private sales at fair prices attest my success.

The imported Bull "Senator II," and about twenty-five head of thorough-bred Durham Cows, chiefly by imported bulls; about twenty Boars and Sows of the best tried and most approved breeds; and also about one hundred head of select Ewes of my new and popular breed of Sheep, known as "Improved Kentucky Sheep;" and also a few pure imported Cotswolds, constitute chiefly my present breeding herd.

Stock of various kinds carefully prepared in all respects for shipment, have been sent to order by me to almost all parts of the United States, and, I am happy to say, with uniform satisfaction to purchasers.

Moderate prices are asked, and remittances may be made by drafts on well known banks and bankers anywhere.

Orders from California will receive prompt and special attention. ROBERT W. SCOTT,
v7-23 2t* near Frankfort, Kentucky.

Cochin China Hens, Rabbits, &c.

THE subscriber would desire to call the attention of the public to his stock of very fine Cochin China Fowls, which he believes cannot be surpassed in the country, and it is very doubtful if they can be equaled. He devotes his whole time to the raising of this one variety of fowls, and believes he has accomplished a desired object by securing perpetual layers. Certain it is he has the largest and finest fowls in the country.

The varieties of Rabbits are unsurpassed, and for size and beauty, cannot be matched in this State.

The undersigned can now offer 300 Fowls for sale, and 1500 Rabbits, all of the best stock.

Purchasers are invited to call at his Ranch on the San Pablo Road, about two miles from Oakland.

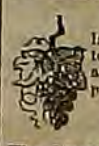
MISCELLANEOUS.

TURNER'S
GINGER WINE



THE UNPARALLELED POPULARITY of this famed Beverage, owing to its wonderful Alterative, Tonic and Anti-Dyspeptic properties, has proved it to be the most health-giving and **Invigorating Medicinal Beverage** That is known to and recommended by

The Medical Faculty of the United States!

The superior facilities the TURNER BROTHERS possess, owing to their having in New York city, Buffalo, N. Y., and in San Francisco, the

Most Extensive Manufactories in the World

For the preparation of

GINGER WINE;
AROMATIC SCHEIDAM SCHNAPPS;
EXTRA RASPBERRY SIRUP;
SPICE AND WORMWOOD BITTERS;
ESSENCE PURE JAMAICA GINGER;
TURNER'S STOMACH BITTERS;
SUPERIOR RUM SHRUB;

And all other Sirups and Cordials in use.

They can defy competition, by making from the BEST materials, the greatest quantities of the various articles that bear their name. Their celebrated and superior

GINGER WINE

Is now so well known that no similar beverage can find consumers where it is in the market.

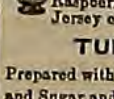
TURNER'S
AROMATIC SCHEIDAM SCHNAPPS,

Prepared with great care, and put up expressly for this market, is composed of the best

SCHEIDAM GIN,

Warranted to be the pure Juice of JUNIPER BERRY.

TURNER'S EXTRA RASPBERRY SIRUP



Has been confessed by consumers to be the best article in use, as it is made from pure Raspberries, gathered in New York and New Jersey expressly for them.

TURNER'S RUM SHRUB,

Prepared with great care from the best Jamaica Rum and Sugar and other materials, and is warranted equal to the best London Shrub.

Turner's Spice and Wormwood Bitters

Need only to be tried once to be properly appreciated and acknowledged as the best Bitters in this State.

Turner's Stomach Bitters

Is a preparation that even the best connoisseurs cannot deny is "first rate."

Turner's Essence of Pure Jamaica Ginger

Cannot be equaled by any preparation in the world, and the best test of its extra qualities is, that it can be found in almost every public and private house in the United States. To protect them from imposition, consumers of Ginger Wine manufactured by us, will find our portraits in a circle, on a steel plate, surrounding the inscription: "TURNER'S GINGER WINE, prepared and sold by Turner Brothers, New York, Buffalo and San Francisco, California."

Benicia High School.

THIS Institution, formerly the "Collegiate Institute," under the charge of the Rev. C. M. Blake, A. M., is now conducted by CORNELIUS J. FLATT, a graduate of the New York State Normal School.

This is the oldest Boarding School in the State.

The next Semi-Annual Session will commence on the 17TH of JANUARY, 1857. It will be the plan of this Institution to unite the system pursued in our best public schools with the usual academical course. We shall pay particular attention that our pupils, in pursuing the dead languages, shall not neglect their own language. History, Mathematics and the Physical Sciences will occupy a conspicuous part of our Course of Institution. Thoroughness in the Elementary Branches, before advancing into Higher Studies, will be a primary requirement.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location is easy of access, the buildings excellent, and the quietness and healthfulness of the village are unsurpassed by any place within the State.

TERMS:

	PER MONTH
Tuition in the Higher English Studies (including the Theory of Surveying, Linear and Linear Perspective Draughting and Book-keeping)	$10 00
Tuition in the Common English Studies	4 00
Tuition in the Ancient or Modern Languages	6 00
Board (per week)	5 00
Washing (per session)	6 00
Private arrangements will be made for Instrumental Music when required.	25 00

No Lights, Bedding or Furniture for rooms required to be furnished by the pupils, nor extra charges made therefor.

For further information or references, address the Principal.

Our friends in the country are invited to save their Rags and send them to us.

Printers, Publishers, Book Binders, &c., can be supplied with extra sized paper at short notice.

v7-19 3m TAYLOR & POST.

Ladies' Department.

[For the California Farmer.]

To T. G., of Louisiana.

Though the falsehood of others pursue thee;
Though they blame—though they seek to condemn;
Let them torture—yes, even defame thee;
Still for *thee* will I grieve—not for them.

Though thy soul with deep grief may be shaken,
Though thy last hope in darkness shall flee,
Think not that by *all* thou art forsaken,—
In *this* land there's a prayer breathed for thee.

Like thee have I felt the foul slanderer's breath,
But they shall not, though still they pursue,
Effect what they wish—a dark living death!
No, my spirit they ne'er can subdue.

I know friends may profess, yet deceive;
That they mask their dark falsehood the while;
I've learned not to trust or believe,
For venom lurks 'neath a fair smile.

Deep misery's cup, have I tasted again;
And my soul they have tried to belie;
But more sad, and far deeper the pain,
To know of thy dark lowering sky.

And oh! if but now my spirit had wings,
To soar—how quickly 't would fly to thee,
To chase from thy brow each shadow that flings,
A stain on thy heart's memory.

Yes, though our paths are on earth rent in twain,
Though thou 'st wronged me, I'll still pray for thee;
And oh! may my prayers not all be in vain,
May they brighten thy dark destiny!

FLORENCE PERCEY.

A short note to the Editor:

DEAR SIR—The false insinuations which were made in regard to Florence Percey, by another journal of this city, in relation to the poetry which appeared in the columns of the FARMER, two weeks since, might have wounded hearts less firm—but her's is proof against such attacks. Conscious of her own innocence of the charge of plagiarism, she can say with the poet:

"Here's a sigh to those who love me,
And a smile to those who hate;
And, whatever sky 's above me,
Here's a heart for every fate."

FLORENCE PERCEY.

[For the California Farmer.]

Home Sickness.

WHAT! a man talk of home-sickness? Yes, a man. And a man that has seen the elephant, bodily, and felt the weight of his foot press heavily upon him. A man clothed in a woolen shirt, cotton overalls, slouched wool hat and cowhide boots. Such a man as this one, with hands hard as horn, and heart warm with affection, gets homesick if any do. Was you never homesick? never felt yourself alone in the busy scenes of life? never felt that there was no one to care for you? whether you did well or ill, that there was no one to share your joy, or lighten your sorrow? never felt that there was no kind mother near, with words of sweetness on her lips? no gentle sister to smile proudly for your success, or blush for your faults? Did you never feel that longing for the old fireside, that none but the wanderer can feel?

Let us see. You have seen many faces more beautiful than your mothers. Yet you never saw one that could smile so sweetly, nor never yet one that you would change hers for. You have seen statelier mansions, skies more sunny, loftier trees, mountains higher, rivers larger, and scenery more grand, than those that come back in memory-prints from home-land. But did you ever see any you loved so well?

You have left that mother's face and smile behind, you have seen the old hills fade in the distance, gradually the rugged steep was smoothed down, the broken and uneven hillsides were converted into gently sloping lawns; all beautiful in the distance.

You are in California; you have toiled in hopes till hope deferred hath made the heart sick. You thought you had friends about you; you became attached to them, loved them; you defended them from the vile tongue of the slanderer and shielded them from the sting of scandal, and was happiest when seeking their welfare. Yet you have been passed by, slighted, and scorned by those you fain would call your friends. And all for the simple reason that you have not the glittering dust wherewith to blind the world.

Then you receive your letters from that long neglected home: you open one, and there, in the trembling hand of your aged mother, you read, "My boy come home." In the next you recognize the fairer and steadier hand of your loving sister: you fancy you can almost hear her sweet voice speaking, "Brother come back to me." Inclosed in this last comes a scarcely legible scrawl, which you know has been scratched by tiny fingers, scarcely able to wield the pen. After some time you make out, "Uncle do come home." Then you contrast the cold selfishness displayed toward you here, with the wealth of affection ready to be poured out for you at home; and as you bow your head upon your hands, and the scalding tears course down your sun-burnt cheeks, what would you not give to once more kneel by your mother's chair and lay your head in her lap, and feel the soft hand of your gentle sister again smooth back the locks from your throbbing temples. Yes, you would give all you possess, and buy the privilege cheap at that.

So I pronounce yours a case of home-sickness of the most malignant type, and you do yourself honor by acknowledging it. So much for the malady—now for the remedy. I shall give what the doctors call a specific. Provided you should be attacked about this time next year—or a few weeks earlier would be better—come to the Tuolumne river, join a party of fifteen or twenty, ride over to the Merced, go down on Gwin's ranch and pick blackberries all day in the broiling sun, get bitten all over by musketos, stain your hands and face with berries, get scratched and torn by briers, be laughed at till you are mad as a hornet, then laugh at some one else till your sides are sore; finally, go home tired, get your supper, sleep on the floor, and get up next morning completely cured; and if you have an attack within the year again, just set down for a quack

Your humble servant,

BEN BOLT.

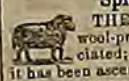
LA GRANGE, June 10.

WE LIVE IN DEEDS, NOT IN YEARS.—A pleasant, cheerful, generous, charitable-minded woman is never old. Her heart is as young at sixty or seventy as it was at eighteen or twenty; and they who are old at sixty or seventy are not made old by time. They are made old by the ravages of passion, and feelings of an unsocial and ungenerous nature which have cankered their minds, and wrinkled their souls. They are made old by envy, by jealousy, by hatred, by suspicions, by uncharitable feelings, by slandering scandalizing, ill-bred habits; which, if they avoid they preserve their youth to the very last, so that the child shall die as the Scripture says, a hundred years old. There are many old women who pride themselves on being eighteen or twenty. Pride is an old passion, and vanity as gray as the mountain; they are dry, heartless, dull, cold, indifferent; they want the well-spring of youthful affection; which is always cheerful, always active, always engaged in some labor of love that is calculated to promote and distribute enjoyment. There is an old age of the heart which is possessed by many who have no suspicion that there is anything old about them; and there is a youth that never grows old, a love who is ever a boy, a Psyche who is ever a girl.

THE MARRIAGE RELATION.—The great secret is to learn to bear with each other's failings; not to be blind to them—that is either an impossibility or a folly; we must see and feel them; if we do neither, they are not evils to us, and there is obviously no need of forbearance; but to throw the mantle of affection round them, concealing them from each other's eyes; to determine not to let them chill the affections; to resolve to cultivate good-tempered forbearance, because it is the only way of mitigating the present evil, always with a view to ultimate amendment.

THERE is a young lady in Louisiana who has won a medal for her modesty. She dismissed her lover for remarking in her presence that there was a prospect of the wind *shift*-ing.

Splendid Merino Stock.



THE value of MERINO SHEEP, and all fine wool-producing Sheep, is beginning to be appreciated; and, from the experiments already made, it has been ascertained beyond a doubt, that Sheep raising will prove one of the most important branches of domestic industry on our coast, as well as the most profitable. The finest grades of Sheep are easiest cared for; the most productive, and pay the best, as fleeces of the common breed of Mexican Sheep produce 2, 2½ or 3 pounds, and sell at from 12½c. to 18c. per pound; while the finer Sheep yield 4, 6, 8 and 10 pounds each, and often more, if clean washed, which sells more readily and commands 40c., 45c. and 75c., thus far outstripping, in value and productiveness, all other kinds, and all idea of raising hereafter the common breeds of Sheep.

The undersigned having fully tried the experiment and proved the above, and having a few very fine Merino Sheep for sale, now offer some fine Bucks and Ewes from the flock that have verified the above facts, as the increased character of the Sheep and Wool produced the past year will prove.

Persons wishing to purchase of this kind of Sheep, can learn all the particulars and price, by addressing the undersigned either at Sacramento (where the Sheep can be seen), or at San Francisco.

GEO O. WHITNEY & CO.,
115 and 117 California street, San Francisco;
Corner K and Fourth streets, Sacramento.

JOSEPH RASSETTE,
v6-1 Proprietor.

Hayward's Hotel,
Five Miles from San Leandro, near the Castro Ranch.

THE Proprietor of the above Hotel takes pleasure in calling the attention of his patrons to his house at the present time. Having taken some pains to newly finish and furnish his house and prepare it for the traveling public, he feels confident he can offer a pleasant and comfortable "home" for the traveler, or for any one that wishes to spend the summer season in one of the finest valleys of the State.

The location is one of the most healthy and delightful spots in Alameda county. Situated upon a commanding eminence, it presents a magnificent view of one of the most beautiful and highly cultivated valleys of California, and opens the prospect to the bay and harbor of San Francisco, and the country around for many leagues.

The Proprietor has spared no pains or expense to fit and furnish his rooms in a style having reference to neatness and cleanliness and comfort. These he feels confident will be approved; and every effort will be made to have the table and and every other department subserve the pleasure of his patrons.

A good Stable is attached to the house. Horses in saddle or harness can be furnished for the pleasantest road scenes in the country—the Springs, the Mission Gardens, the Fishing Grounds, and other places, furnishing abundant sources of amusement for the benefit of invalids or persons desiring recreation and pleasure.

☞ The patronage of the public is solicited. v7-18 3m

Estudillo House,
SAN LEANDRO, Alameda County.

THE subscribers respectfully inform their friends and the public that they have purchased the interest of the former proprietors in this popular and well-known establishment, and trust, by strict application to business and attention to the comforts of their patrons, to merit a share of public patronage. It is their intention, as soon as practicable, to make great improvements on the premises, and their patrons may rest assured that none but the choicest of Liquors will ever be found at their house. The table will be supplied with the best the market affords, and the rooms are furnished in a manner not to be surpassed by any hotel in the State.

To those of our friends who may not be "posted," we beg leave to say, that our house is located at the county seat of Alameda county, six miles from San Antonio, to which place the Contra Costa boat makes three trips a day. Stages leave San Antonio immediately on the arrival of the boat, and return in season to meet her on her return trips.

San Leandro is situated on the main road to San Jose, in the center of the finest farming district of country in this State. The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families who may wish to retire for a season from the bustle of city life. The house is admirably adapted for the accommodation of families, and particular attention will be paid to those who may honor us with a visit.

The long experience of Mr. Biggs, formerly one of the well-known firm of Biggs & Kibbe, is sufficient assurance that the public will always be able to find, at this house, the choicest articles that the market affords.

v7-13 A. R. BIGGS & CO.

Antelope Restaurant,
Nos. 74 and 76 J street, Sacramento.

THE Proprietors of the above named Restaurant offer it to their friends and patrons as a *first class restaurant*, perfect in all its appointments, with Lodgings attached.

The Proprietors hope, by strict attention to business, to give satisfaction to all who may favor them with their patronage.

J. D. Treat. [7-8 3m] Charles Brooks.

OY'S FINE OY'S.

THE luxury of a good "Oyster"—a genuine "Cove Oyster;" one of your Baltimore or New Yorker's (the very thought of which makes one's mouth water)—can always be found by those who can appreciate them, either in the Shell, Broiled Fried or Stewed, and in true epicurean style, at "DAN'S OYSTER SALOON;" and with this appetizer, before or after, every other dish of dainties, such as those who appreciate good things can always find at DAN'S OYSTER SALOON,
Montgomery street, bet. Commercial and Clay,
v7-14 San Francisco.

To Teamsters and Others.

PATENT ANTI-FRICTION AXLE GREASE.

THE season of internal communication with the mining district having opened, with a prospect of a large hauling business, the subscribers take the opportunity of thanking their numerous customers for the extensive patronage they have experienced for their

PATENT AXLE GREASE

during the last four years, and beg to say that no pains will be spared in its future manufacture to sustain it in the wide reputation it has acquired as the best lubricating medium for Coaches, Wagons, &c., ever introduced into California.

HUCKS & LAMBERT,
Inventors and Sole Manufacturers,
Mellus street, San Francisco.

NOTE.—One application of the Patent Grease will enable the heaviest teams to perform the longest journey, without requiring to be re-greased on the road; and further, as the Patent Grease works free from coomb or gum, the draft of the horse is very considerably lightened—a great desideratum in a long journey over a heavy road. v7-15 tf

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this stumpy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 500 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. [v7-9] WARREN & CO.

Hydraulic Hose and Pipes.

A FULL and complete assortment of Rubber and Leather Hose, from one-half to six inches in diameter, from two to six ply, with and without canvas covers, with pipes to match. DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that of all the esculents proposed as substitutes for the diseased Potato, the Dioscores Batatas is certainly the ONLY important one. We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid*. Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (SORGHUM SUCRE).—We can supply seed of this now celebrated and invaluable Cane in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; NEW ORANGE WATER-MELON; KING PHILIP CORN. All of which with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by

Smith's Pomological Gardens
AND
NURSERY.

On the American River, 2½ miles from Sacramento.

THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines, Greenhouse Plants

to be found in any one establishment on the Pacific Coast.

Care and experience in selecting and propagating scions are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple,	Peach,	Pear,
Cherry,	Nectarine,	Apricot,
Fig,	Currant,	Gooseberries,
Raspberries,	Strawberries,	Grape Vines.

All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS, HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm,	Locust,	Catalpa,
Maple,	Laburnum,	Weeping Willow,
Ash,	Ailanthus,	and Cutleaf Trees.

Some fine Arbor Vitæ and other Trees and Shrubs of numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size and flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for form and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

. Orders sent by either of the Express companies, and stating they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase of our regular authorized agents. Some venders of Seeds, &c., have falsely represented themselves as our agents to sell *for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their contract, and will furnish Catalogues to all who may desire them.

☞ J. F. SWIFT, No. 7 Washington Market, is our Agent in San Francisco for Smith's Pomological Gardens.

J. L. POLHEMUS

DRUGGIST

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more as between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Goddis' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is permanently recommended for Ague and Fever, when every other remedy fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets, SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

R. H. VANCE.

CONSISTING, IN PART, OF

FINE ROSEWOOD, WALNUT AND MAHOGANY

PARLOR AND CHAMBER SETS,

SOFAS, OTTOMANS, LOUNGES AND EASY CHAIRS; BUREAUS, SIDEBOARDS, WHATNOTS, MIRRORS, OF ALL SIZES.

OFFICE AND KITCHEN FURNITURE

IN GREAT VARIETY!

WE ARE NOW MANUFACTURING FROM OUR NATIVE WOODS, ALSO FROM WALNUT AND ROSEWOOD, MOST OF OUR

FINEST FURNITURE,

AND CAN PRODUCE AN ARTICLE SUPERIOR FOR

STRENGTH, DURABILITY AND BEAUTY,

TO ANYTHING IMPORTED FROM THE EASTERN STATES.

WE HAVE CONSTANTLY ON HAND AND ARE IN REGULAR RECEIPT OF FULL AND COMPLETE INVOICES OF GOODS ADAPTED TO THE

INTERIOR AND COAST TRADE.

☞ To Wholesale Dealers we would say, your orders will receive, as formerly, our careful and prompt attention.

v7-20 JONAS G. CLARK & CO.

Ho! There, Everybody! Face the Music and Read!

If you have business of any kind to transact, is it not important that you should endeavor to get as near as possible to where business of all kinds is known to center?

Do you wish to patronize a house conducted on strictly temperance principles?

Do you want to stop at an establishment favorably known throughout California, Oregon, and all other places, for its moderate charges, good tables and best of beds, together with order, comfort, convenience, and superior accommodations?

If you desire all these, we advise you to go to

WOODWARD'S

87, 89 and 91 Leidesdorff street---119 and 121 Sacramento street.

This establishment is centrally located in the principal business part of the city, and in the immediate vicinity of the Steamship Company's Office, the Express Companies Offices, and the United States Branch Mint.

BOARD, per Week, $6. BOARD, per Day, $1. MEALS, 50 cts. LODGINGS, 50 to 75 cts. per Night.

☞ Single Rooms, furnished complete, 75 cents per Night.

☞ Rooms or Lodgings can be had by the Night or Week, with or without board, to suit the convenience of all.

The Beds are fitted up in the very best style, with patent French springs, and the best of curled hair mattresses, clean bedding, &c.

☞ BATHS FREE! ☜

By unremitting attention and untiring efforts to furnish the greatest amount of comfort and convenience at extremely low prices, the proprietor hopes to merit a continuance of the increasing patronage that the What Cheer House at present enjoys.

For the accommodation of miners and others having money or valuables, there are two large safes in the office.

There is an extensive Library and Reading Room, well supplied with papers, periodicals, &c.

THE HOUSE IS OPEN ALL NIGHT.

☞ Travelers will please to remember that there are no "Runners" connected with this establishment.

The What Cheer House is conducted on strictly temperance principles.

v7-18 R. B. WOODWARD, PROPRIETOR.

Scarcity of Grain at the West.

From careful inquiry, personally made, both of people from the country and along the lines of three of the principal roads leading into this city, we are convinced that the expectation indulged in by some of our cotemporaries in regard to the quantity of grain to come forward to this market during the present season, are not founded on facts. The crop of last year was by no means remarkable; it has probably been largely overestimated, as the events of the Spring and Summer will prove. Though it was large enough to have left, in an ordinary season, a very considerable surplus in the hands of the farmers, the extraordinary duration of the Winter has cleaned out their granaries and cribs entirely; and even in our own State thousands of men who usually have corn and oats to sell have been for a month past, and are yet, buying from their neighbors to keep their cattle and horses alive until a few warm and pleasant days bring out the new grass. All along the Mississippi, on the Iowa side, there is the greatest distress among farmers for feed, and many of them, so great is the scarcity, are losing entire herds by starvation. A gentleman from Maquoketa tells us that in that region—by the way, one of the richest and most productive parts of Iowa—cattle are dying by hundreds, and that farmers who hauled their surplus to the river and sold it in the fall, are now buying it back by wagon loads at three times the price they got for it six months ago. In the country west of Davenport, and about Iowa City, the same state of things exists.

At Quincy the demand for corn to take over into Missouri is much greater than the supply; and one distillery at least is buying grain at St. Louis, and sending it up the river by the boat load, to avoid stopping work, as it would if obliged to depend upon home supplies. At Keokuk and Burlington the demand is very active, and the supply small, as it is, indeed, in every other part of the West from which we have heard. Along the St. Louis and Chicago road there is more corn, but not half the usual quantity. Along the Galena Air Line, Galena and Chicago, the Chicago, Burlington and Quincy, and the Chicago and Rock Island roads, hardly a full crib is to be seen. In one word, the cattle have eaten up the entire surplus of corn, oats, hay, and in many places the potatoes also. The winter has exceeded its usual length by full forty days; and in those days the mischief has been done. Let the doubter take his pencil and make his own figures. There are in Illinois fully two million horses, mules, cows, oxen and other cattle. Admit that only a half of this number, saying nothing of the three million sheep and swine, have required forty days' extra feed, and then see what, after their wants were supplied, would be left of the very moderate crop of 1856.

If the warning that may be gathered from our account—which, we admit, is doleful enough—will prevent any from overstocking, or from selling present stocks upon expectations of speedy pay, or if it will stimulate the farmers to sow and plant a wider area, and to practice more economy in the use of their hay and grain in the subsequent seasons, we shall have accomplished all we desire.—[Chicago Tribune.

A Famine.—Great distress is said to prevail in parts of Russell and adjoining counties in Kentucky, owing to the scarcity and high price of provisions. There is but very little grain or meat in that section to be purchased at any price; and while many families are in a destitute condition as regards food, many are actually in a state bordering on starvation. A public meeting was held at Jamestown to devise some plan by which the necessities of the sufferers could be relieved, and liberal donations were made, with the view of sending to Nashville for provisions.

Hens and Rabbits.

We feel it will oblige our readers and friends to tell all who desire to procure a very extra breed of laying hens, to go to Mr. Smith, on the San Pablo road, and if they wish to see one of the prettiest sights of domestic rural life, go and see the Hens and Rabbits he offers for sale (see advertisement). The hens are the largest we ever saw, and the rabbits the finest. The hens are the large Cochin China, and we were shown one that has laid 107 eggs; laying fifteen or twenty, resting a few days and commencing again without the usual desire of sitting. This hen has heretofore hatched 15, 18 and even once 23 chickens from 24 eggs.

We saw 2000 rabbits, from pure white to jet black, and of many fancy colors. Mr. Smith has fifty very large fine grey rabbits, for which he was offered $3 each and refused. The yard and buildings for the raising poultry and these pretty animals, are finely arranged and well worthy a visit.

Mr. Smith has also a small orchard of peach and plum trees which have made some extra growth. We measured one plum 4ft. 6in. growth, and one peach 4ft. this year from the bud. We advise all who can to visit these grounds.

A Valuable Grass.—When at Sacramento last week, we were invited to call at the garden of Mr. Williams, on N street, between Fourth and Fifth, to examine the product of a parcel of grass seed we had given to him in the spring of last year. The sight of this grass was pleasing in the extreme to us. We found it to be the Italian Ray Grass; a very handsome green, a graceful foliage, a soft and delicate yet firm grass; and we were pleased to see so fine a plat of it. It was in full head of seed, and we learned that Mr. Williams intended to collect it carefully, and offer it for sale this fall, in small parcels. This grass is of an uncommon excellence, and we would particularly recommend it. Having been acclimated, it is indeed of priceless worth. Mr. and Mrs. Williams have a very neat and well cultivated garden, full of rich roses and other flowers, and some of the finest carnations we have seen this year above San Francisco; and they can make up as pretty a bouquet of flowers as need be required, and we most cheerfully recommend those who need such articles to call and procure them. We received such a gift and appreciated it.

Holloway's Pills.—A supreme remedy for Female Complaints. Were it possible to have a collection similar to Barnum's Baby Show, a premium of $10,000 would be given could any be found as handsome as lively, as vigorous, as those who use these wonderful Pills.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box.

THE FIRST INDUSTRIAL EXHIBITION

UNDER THE DIRECTION OF THE

MECHANICS' INSTITUTE

Of the City of San Francisco,

WILL BE OPENED IN

SAN FRANCISCO,

On Monday, September 7, 1857,

And continue Open at least Ten Days.

CIRCULAR.

In accordance with the announcement contained in a brief circular issued in December last, THE FIRST INDUSTRIAL FAIR of the Mechanics' Institute of the City of San Francisco, will be held in said city in September next, commencing on Monday, the 7th day of the month, and continuing open at least ten days.

The Board of Directors having carefully considered in all its bearings the subject of holding a Fair at the time proposed, have arrived at the conclusion that with a reasonable amount of exertion on the part of Mechanics and others interested—such an Exhibition can be made not only creditable, but highly beneficial to our young State.

The advantages of Fairs must appear obvious to every reflecting mind, and in no quarter of the globe do they promise more than in California, where so much may be accomplished by the dissemination of correct information, relative to her natural and artificial resources. Besides exciting emulation; extending practical knowledge; suggesting ideas to ingenious minds; affording tangible evidence of superiority; stimulating talent; promoting extensive social intercourse among producers and their patrons, and exhibiting the progress of the arts; they cannot fail to excite a world-wide interest in regard to our State and extend reliable information respecting its resources, which will tend to encourage immigration and to permanently establish beneath our genial skies, an industrious, enlightened, prosperous and happy population.

We earnestly solicit for exhibition the products of every department of Industry—works of art every variety—choice specimens of ingenuity and skill—rare and valuable productions, natural or artificial—the delicate and beautiful handiwork of women—useful labor-saving machines—implements of mining and husbandry—new models of machinery—the products of the quarry and the mine, the hot-house, the orchard, the vineyard, the garden and the field—in short whatever Nature or Art can contribute, Curiosity discover, or Ingenuity devise.

Importers and Dealers are cordially invited to participate in the Fair by exhibiting whatever is calculated to excite interest or extend information in regard to useful improvements.

Persons throughout this State and Oregon are requested to communicate such facts relative to the natural resources, and the facilities for industrial pursuits in their respective districts, as may be deemed by them important; also to give reliable information concerning the geology and mineralogy of their particular localities; and, a Committee of scientific and practical men will be appointed to prepare a report based upon the information thus derived.

We cordially invite the co-operation of all classes in the community, believing that *all* are interested in making this, an Exhibition worthy of general notice and admiration. Medals and Diplomas will be awarded to the owners of such articles as may be deemed worthy of such distinction, and we intend that the strictest impartiality and fairness shall be observed in the appointment of Judges and the distribution of awards.

We confidently hope that the experiment about to be made of holding an Annual Industrial Fair in San Francisco, will be crowned with success and give general satisfaction.

The California Steam Navigation Company—the Pacific Mail Steamship Company, and other Transportation Companies, have generously offered to carry articles intended for the Fair, free of charge.

All articles forwarded, should be labeled, "*For the Industrial Fair*," and addressed to "H.F. Williams, *Mechanics' Institute, San Francisco.*

RULES AND REGULATIONS

Of the First Industrial Exhibition of the Mechanics' Institute, of the City of San Francisco.

I.

The Rooms will be opened for the reception of goods on Monday, August 24th, and continue open for that purpose until Saturday, September 5th, and the Exhibition will be opened to the public on the Monday following.

II.

When articles are entered, a check for the same will be given, which must be presented when the articles are returned.

III.

The name of every article should be attached to it, and also a description, pointing out its merits, when thought desirable by the exhibitor.

IV.

Articles intended for sale will be labeled accordingly, but cannot be removed until the close of the Exhibition except by the written permission of the Committee of Arrangements.

V.

Light, fancy, or perishable articles will be received, or may be removed, at any time during the Exhibition, with the consent of the Executive Committee.

VI.

Proof of origin must be given when required.

VII.

Committees will be appointed to examine all articles presented, and the Executive Committee will award premiums, on such as the several Committees shall decide most worthy. The Premiums to be delivered as soon as they can be prepared.

VIII.

The morning of each day till 9 o'clock, will be appropriated to the Judges, and visitors will not be admitted during said time.

IX.

In case of misunderstanding, application may be made to the Executive Committee, who will at all times be in attendance.

X.

Steam power will be provided, that Machinery of all kinds may be seen in actual operation, and every facility possible will be given to exhibit all working machinery to the best advantage.

XI.

All articles deposited will be at the risk of the owners, who are invited to be present during the hours of exhibition. In the intervals of the exhibition, efficient measures will be taken for the protection of property.

XII.

Articles from a distance will be stored free of charge, until the rooms are in readiness.

XIII.

Owners or agents offering articles for exhibition, will receive tickets of admission gratis, but in no case transferable.

XIV.

Persons intending to take part in the Exhibition, are earnestly requested to make known their intention at the earliest practicable period—stating the kind of article or articles they intend exhibiting and the probable amount of space required.

XV.

London Lancet, from commencement to 1844. 46 vols bound in 42, 8vo, half calf, *fine copy*.....70 00

London Pharmaceutical Journal, from commencement to 1853. 14 vols, half calf, *very fine copy*.....35 00

Transactions of the Provincial Medical and Surgical Association, numerous colored plates, from commencement to 1851. 18 vols, half Morrocco, *very fine copy*.....35 00

Sydenham Society Publications, from commencement to 1856. 37 vols 8vo and 1 vol. folio, full cloth, gilt tops, fine copy.....100 00
Complete sets of these works are rarely for sale; several of the volumes being out of print.

Medico-Chirurgical Review, from 1816 to 1847. 58 vols, half sheep, not quite uniform.....85 00
This set includes 7 vols, edited by Drs. Shearman, Johnson and Palmer, which have been long out of print.

American Journal of Insanity, from commencement to 1856. 12 vols, bound in 6, sheep.....15 00

Ranking's Half Yearly Extract of Medical Sciences, 1846 to to 1855. 10 vols, half cloth.....7 00

New York Lancet. Edited by Dr. Houston. 2 vols, half sheep.....2 50
Containing Lectures of Professors Mott, Revere, Stevens, Swett; also Drs. Detmold, Forry, Marshall Hall, John Hunter, &c.

New York Medico-Chirurgical Bulletin. Edited by Dr. Bushe. 2 vols in 1, all published, half calf.....1 50

Journal of Health. By an Association of Physicians. 1829 to to 1833. 4 vols, all published, sheep.....3 00

London Lancet for 1845, reprint. 2 vols, cloth.....1 50

The following will be sent to any part of California by mail, free of postage, at the prices affixed:

Bedford's Diseases of Women and Children. 4th ed...$3 50
"Eminently practical, and therefore valuable as a contribution to medical knowledge."—[Southern Med. and Surg. Journal.
"The most valuable work on the subject ever presented to profession."—[Cincinnati Med. Journal.

Hassall's Microscopic Anatomy of the Human Body in Health and Disease. With colored plates. 2 vols.....8 00
"Pre-eminently the best illustrated microscopic human anatomy that is accessible to us in this country."—[Medical Examiner.

Comstock's and Coming's Principles of Physiology. With colored plates.....3 50
"It is a fascinating book for man, woman or child."—[Boston Med. and Surg. Journal.

Smith's Treatise on Fractures in the vicinity of Joints. 191 Illustrations.....4 50
"One of the most valuable works which has ever issued from the press on the subject of fractures."—[Ranking's Abstract.

Harrison's Text Book of Anatomy. Second Edition. With engravings.....3 00
"Such a one as every student should possess."—[Ohio Med. and Surg. Journal.

Vidal on the Venereal Disease. Edited by G. C. Blackman, M. D. With colored plates. Second edition.....3 50
"The best general treatise that has ever been published. The colored illustrations are the most beautiful and faithful things of the kind we have yet seen."—[Montreal Med. Chronicle.

Fuller on Rheumatism, Rheumatic Gout and Sciatica...2 00
"One of the best practical works of modern times."—[Winslow's Journal of Psychological Medicine.

Quain's Anatomical Plates. Illustrating the structure of different parts of the human body. 200 plates; 4to; 4th ed. 20 00
"The cheapest work of the kind ever published in this country."—[Am. Jour. of Med. Sciences.
[Too large for mail—will be sent by express.]

Carenave and Schedel on Diseases of the Skin. Edited by H. D. Bulkley, M. D. Second edition.....2 00
"One of the most concise, complete and practical treatises with which we are acquainted."—[Northern Lancet.

Carnochan on Congenital Dislocations of the Head of the Femur. With plates.....1 75
"By far the most complete and systematic work in the English language, and the only one which contains any directions for treatment."—[British Am. Med. and Phy. Journal.

Tilt on Diseases of Menstruation and Ovarian Inflammation.....1 25
"A lucid and satisfactory treatise upon a most interesting class of diseases."—[Nashville Jour. of Med. and Surgery.

Cook's Manual of Obstetrics.....1 25
"A plain, sensible, judicious and reliable manual."—[Kentucky Medical Recorder.

Mott's Nelpean's Operative Surgery. Edited by Dr. Blackman, Prof. of Surgery in Medical College of Ohio. 3 vols, 8vo and 4to Atlas of 22 plates.....20 00
[Too large for mail—will be sent by express.]
"A work which embraces almost every known or imagined operation of early or late times, and is indispensable as a work of reference to surgeons."—[Ill. and In. Med. and Surg. Journal.

Gregory on Eruptive Fevers. Edited by H. D. Bulkley, M. D. With colored plates.....2 75
"Abounds with valuable information in regard to a class of diseases of very frequent occurrence and of fearful mortality."—[Stethescope.

Beck's Materia Medica and Therapeutic's.....3 50
"As a text-book for students, we know of no better treatise."—[Am. Jour. of Med. Sciences.

Budd on Organic Diseases and Functional Disorders of the Stomach.....1 75
"The fullest and most satisfactory work, exclusively devoted to the stomach, that we have ever perused."—[Med. Counsellor.

Chambers on Digestion and its Derangements.....2 50
"A work of rare merit, and should be in the hands of every practitioner."—[Eclectic Med. Journal.

Foote's Practitioner's Pharmacopœia, and Universal Formulary, containing 3000 classified prescriptions.....1 50
"The newest in regard to the materials which compose it, the easiest of reference, and the most valuable compendium for daily use."—[N. H. Journal of Med.

Quain on Diseases of the Rectum, second edition, with colored plates.....2 50
"An extremely good guide for all who have to deal with these troublesome complaints."—[Brit. and For. Med. Chir. Review.

Wright on Headaches, their Causes and their Cure.....0 60
"A very excellent brochure, affording a good deal of information upon a subject which most works say but little about."—[Medical Examiner.

BOOKS, &c.

Beck's Essays on Infant Therapeutics. Sec. edition...00 80
"A perfect gem. We regard it one of the most useful books in our library."—[N. Y. Med. Reporter.

Cox's Companion to the Medicine Chest. From the 33d London edition.....00 75
"It is just such a volume as ought to be in the hands of the traveler by sea or by land."—[N. Y. Med. Reporter.

Goddard on Anatomy, Physiology and Pathology of the Human Teeth: with 33 plates.....4 00
"Contains valuable information for the general practitioner as well as the dentist."—[Peninsular Jour. of Medicine.

Johnson and Martin on Influence of Tropical Climates..3 00
"In no work do we remember to have seen the important subject of preserving health in tropical climates so ably, so clearly, and so philosophically treated."—[New Medical and Physical Journal.

Cooper's First Lines of the Theory and Practice of Surgery. Edited by W. Parker, M. D., Professor of Surgery, &c. 2 vols.....6 00
"The names of S. Cooper and W. Parker are alone sufficient guarantee of the value of the volumes."—[Buffalo Med. Jour.

The British and Foreign Medico-Chirurgical

REVIEW;

OR,

Quarterly Journal of Practical Medicine and Surgery.

"Among the medical publications, the very best reprint among the quarterlies, is the British and Foreign Medico-Chirurgical Review."—[Hall's Journal of Health.

THE GRAMMAR

OF

ENGLISH GRAMARS,

By Goold Brown,

Author of "The Institutes of English Grammar," &c., &c.

Second Edition—Revised and Improved.

With Portrait of the Author.

"It leaves far, very far behind it, everything which has hitherto appeared under the denomination of an English Grammar. * * * It is in the amazing extent and compass of the '*critica ejica*'—the topics, definitions, rules and illustrations; in the acute investigation which is everywhere displayed; and in the minuteness and perfect finish with which every particular is wrought up, that the distinguishing features of the work most manifestly appear. * * * We see, as the result of all that has been done by our author, a noble and most important book—ample, critical and symmetrical in a high degree—and, what is a most remarkable feature, an original work—the work of one head and one pen."—[The District School Journal of Education.

"We have carefully examined its pages, and feel bound to acknowledge it a standard work—settling numerous and vexatious disputes among teachers and scholars, and rendering plain and interesting what has heretofore appeared difficult and uninviting, and even unprofitable to those who aimed at certainty."—[The American Artisan.

V. M. Rice, late Superintendent of Public Instruction for the State of New York, in a recent letter, speaking of the author of this work, says: "I know of no man to whom this country is more indebted for a correct knowledge of our language than to him."

Also, recently Published, Revised Editions of

Brown's First Lines of English Grammar,

For Young Learners.

Brown's Institutes of Grammar,

For the Higher Classes.

Samuel U. Berrian, of Rye, School Commissioner for the Second District of Westchester county, N. Y., says:

"The definitions and rules are rigidly exact, the paradigms neatly arranged, and the formules explicit and easy of enunciation. *Method* is a marked feature of the book [First Lines]; and as to its didactics, whatever is said, is said in the fewest words possible: principle is never found clashing with principle; there is a due sequence in the parts; and all goes to make up a harmonious whole.

"Brown's Grammars are of a class *never to die*. At present of unapproachable excellence, and the highest possible authority, we doubt if they can ever be superseded, at least while our language remains what it is. The 'Institutes,' the author's intermediate, or academic Grammar, comes forth now also rejuvenated, elaborately polished, and beautiful in its exterior. We call the attention of teachers and private learners to this work, especially of those teachers who have the conduct of higher schools."

"Brown's 'First Lines,' and his 'Institutes of English Grammar,' in their original forms, were the best Grammars we ever used; with their improvements, they justly command the good will of teachers."—[Massachusetts Teacher.

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Mercurial Diseases, Rheumatism, Cutaneous Eruptions, Stubborn Ulcers, Liver Complaint, Dyspepsia, Bronchitis, Salt Rheum, Lumbago, White Swellings, Hip Disease, Enlargement of the Bones and Joints, Fever Sores, Female Complaints, Erysipelas, Loss of Appetite, Pimples, Biles, General Debility, &c., &c.

It has long been a most important desideratum in the practice of medicine, to obtain a remedy similar to this, and accordingly we find it resorted to almost universally in all those tormenting diseases of the skin so trying to the patience, and injurious to the health. It is a tonic, aperient, and disinfectant. It acts simultaneously upon the stomach, the circulation, and the bowels, and thus three processes, which are ordinarily the result of three different kinds of medicine, are carried on at the same time through the instrumentality of this one remedial agent. Its great merit is, that it meets and neutralizes the active principle of disease itself, and when that is gone, the symptoms necessarily disappear. The rapidity with which the patient recovers health and strength under this triple influence is surprising.

REMARKABLE CURE.

Lynn County, Oregon Ter., March 11, 1853.

Messrs. A. B. & D. Sands, New York: Gentlemen,—In the spring of 1853, while on our way from Indiana to this place, our eldest boy was seized with a swelling and severe pains in the legs, which day by day grew worse, until his legs contracted, and became so painful that he could not walk, and we had to carry him about like an infant. We reached Albany on the 1st of October, completely worn out by fatigue. By this time he was reduced to a perfect skeleton. Here we were enabled to consult a physician (Dr. Hill), who honestly confessed he could not cure him, although he could give him medicine that would relieve the pain. In this exigency something must be done, or death was inevitable. Being recommended to try your Sarsaparilla, I procured a bottle. After taking some, he appeared worse; but persevering with it, I obtained a second bottle, which seemed to grapple with the disease, and caused a marked improvement: the swelling and pain in the legs were reduced, his appetite improved, and his color began to return. This encouraged, I purchased a third bottle; while taking it, the rheumatic lings in his legs broke, and some pieces of bones one-eighth of an inch long came out, after which his legs straightened and healed up. He is now perfectly recovered, has no appearance of being a cripple, and can perform most kinds of common labor as all our neighbors will certify.

Yours, respectfully,

CALEB DAVIS.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co. Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

ROMAN EYE BALSAM,

FOR INFLAMED EYE-LIDS.

The delicate structure of the eye-lid renders it peculiarly sensitive and liable to disease. When, from any cause, it becomes affected, the inner membrane rapidly inflames, and the eye-lid evinces the strongest predisposition to attract to itself humors from all parts of the body. Hundreds of persons of scrofulous habit are disfigured by rawness or redness of the eye-lids, commonly called sore eyes, and tortured with apprehensions of impaired vision, who, by using this BALSAM, may obtain almost immediate relief. In all cases, the earlier this remedy is applied the better.

READ THE FOLLOWING EVIDENCE.

New York, July 15, 1854.

Messrs. A. B. & D. Sands: Gentlemen,—I have been troubled for years with an affection of the eye-lids, and have tried a number of remedies, without experiencing any decided benefit. A few weeks since I obtained some of your Roman Eye Balsam, and applied it according to the directions. The first application produced a decidedly beneficial effect, and I had not used it a week before my eye-lids were entirely free from inflamation, which had not been the case before for many years.

Yours, &c.,

G. B. Williams, 262 Broadway.

PRICE, 25 CENTS PER JAR.

Prepared and sold by A. B. & D. SANDS, Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v7-16 1y

DOCTOR HOOFLAND'S

CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,

Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such

as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparation extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 96 ARCH STREET, Philadelphia, Pa.

For sale by all Druggists in California and elsewhere.

PARK & WHITE,

Washington street, San Francisco,

Wholesale Agents for California.

HOME! SWEET HOME!!

When you visit the States, remember "Oak Hall," the Pioneer Clothing House, established in Boston, Mass., in 1841, where you will find every article of Clothing and Furnishing Goods (on the one price system), necessary to complete a genteel dress, for the domestic circle, the drawing room, or the church. The stock is daily replenished with goods manufactured for the Wholesale and Retail trade, and offers great inducements to purchasers.

Nos. 28, 30, 32, 34, 36 and 38, North street,

BOSTON, Mass. v7-14 1y

To Photograph Operators.

Ambrotype, Photograph and Daguerreotype

STOCK AND CHEMICALS,

FROM THE BEST MANUFACTURERS,

FOR SALE AT THE LOWEST PRICES, BY

R. H. VANCE,

Corner Montgomery and Sacramento streets,

SAN FRANCISCO.

BEING OURSELVES PRACTICAL CHEMISTS, and manufacturing many of our Chemicals, we can guarantee them far superior to any put up for sale.

To operators out of the city we will send our own prepared Collodion, which we use and which surpasses any ever sold in the country for tone and finish.

☞ **Advertisements and Subscriptions must be paid for in Advance.**

Interesting Letter from the Tuolumne.

The annexed letter from our esteemed correspondent will show that the *Country* is prosperous, and it will show that we have an *industrious* population, and one that is regarding the vital interests of California—the Schools and the Homestead.

We wish some of the Farmers in each section of the State would follow the example of our friend, visit their neighbors, and give us an account of their condition and progress. By so doing, a spirit of neighborly brotherhood is created, which results in greatly benefitting all, and we believe no one can adopt such a practice without being greatly benefitted personally. The information they acquire is manifested by the great improvements shown upon their own farms, and if we needed a strong case in proof of this, we would point to the splendid Ranch of our present correspondent, who has thus while making known the improvements of others, been constantly applying his practical knowledge, until his Ranch shows he has not failed to secure, by the information thus acquired, the benefits to himself.

We call the attention of our readers to the facts given by our correspondent, showing the large breadth of cultivation; and also that *new Flour* was made at the mill of Mr. Nelson, on the 11th day of June. These are important facts. New flour long before the Old crop is exhausted! This does not look like scarcity of Breadstuffs!

With many thanks to I. D. M., for his interesting letter, and for his kind interest for our journal, we lay his letter before our readers:

—

Tuolumne River, June 12, 1857.

Editors Farmer: As the Harvest is now almost through with, I take the liberty to report the prospect and condition of the crops on this and the Merced Rivers.

Harvest is so far advanced on the Tuolumne, that we can make a close calculation as to the amount of crop, having had the privilege of paying a visit to most of the Ranches on the river that are producing grain and hay. Altogether, on this river, the crop is light. Machines are at work, which proves the yield.

Yesterday, I was on the Merced River. Here the harvest was not as far advanced as in other neighborhoods. This is owing to the lowness of the land. And here I must mention that the Merced Valley is one amongst the best in this State. The Valley is from one to six miles wide, and thirty to forty miles long, containing quite a large population, with many very interesting families, who, to all human appearances, intend to make California their home.

I will now give you a passing description of the Ranches above the county seat (Snelling's), along the line of the river.

The first place we come to is owned and occupied by Judge Fitzhew, the active County Judge of Merced; and if he attends to his official duties as he does to his farm, we must come to the conclusion that Merced county has a good Judge. Having been acquainted with the Judge for the last four or five years, we consider him almost an exception among judges, in regard to good morals, a well wisher to education, and also a good farmer. He is not of the kind that make *dog, mock,* or *watch* fences; but goes to the mountains, gets good cedar posts and rails, and erects fences that would do an honor to any of the older States. Would to God that we had more like the Judge. Quite an important work has been accomplished by the Judge and a few of his neighbors united, who have taken water out of the Merced for the purpose of irrigation and for the comfort of stock in their fields. I am happy to say that for six to eight miles up along the north bank of this river, every farmer looked like thrift, having good fences, mostly of cedar posts and pine plank or boards.

C. Mugler, a short distance above the Judge, has a fine farm, comfortable house, and like every good Dutchman he has a good barn, which he says is profitable. The next place is Lewis Bunday's. He has a good two-story house, well painted, and like his Dutch neighbor, has a good barn, and all looks like thrift about the place.

I omitted to say, that Judge Fitzhew has a large crop of Barley; he has not much Wheat, as the crop is light. Mr. Bunday has 360 acres of grain, mostly Barley, and light. Mr. Mugler has the same amount, and it is also light. I may mention that my Dutch friend has set the farmers on the Merced a good pattern in putting up his grain. Mr. Mugler gathered his grain soon after it was cut; while many were not through cutting, and had none hauled. Mugler's was about equal to any of his neighbors', and on the 11th day of June was mostly in stacks, not in piles and sprawls as some leave it.

Just above is the Ranch of Hempsted and Ivet. They have a good farm, under good improvement, and are farmers of the right kind. Mr. John Mack has a good crop. The next above is H. Wilson, who a fine farm. E. Kelsey, County Surveyor, is next above Wilson, and has a good crop on his fine farm. He and Wilson have water to use for irrigation. The next place is Mr. Kelley's, a new beginner. Next to him is R. B. Hall, Esq., practicing law. He has a family, and is one of the strong advocates for Common Schools throughout the land; this he has proven by example as well as precept. The next place is that of Wm. Nelson. He has a fine farm, and a good Flouring Mill propelled by water—one of the best in the State. This is at the foot of the low hills on the road leading from Stockton to Mariposa town and adjacent camps. The mill is situated in a good agricultural district, and the location for the dam is one that is natural, being on the rocks where the channel is narrow, and no matter how much water comes, the dam is safe; neither is there any fear of the mill being swept away by high water. I was at this mill on the 11th day of June, and saw Mr. Nelson manufacturing *new flour*. In previous years Mr. Nelson has made for me as good flour as ever I saw or had in any of the older States, or in California. In addition to farm and mill, he has a good garden and various kinds of fruit and ornamental trees. He has Peach, Pear, Apple, Plum, Cherry, Quince, Grape, Fig, Pomegranate, Orange, Currant; and the Catalpa and Mallow, ornamentals. He also raises Potatoes, Melons, Tomatoes, Peas, Beans, Corn, and in fact many luxuries. And I may remark that Mr. Nelson is also a man that goes in for good schools, which he fully demonstrates by his acts. A few weeks ago he made an effort to get up a good school. At the time there was no schoolhouse in the vicinity, but through the efforts and perseverance of Mr. Nelson, a schoolhouse was soon erected, though he had to bear the major part of the expense. They now have a good school, taught by Mr. C. L. DesRochers. At the present time this school has twelve or fifteen scholars, and if I am not laboring under a great mistake, this man is well qualified to teach, and gives satisfaction to all in the district.

Referring to schools, I would say that we have also a good school at Branch's Ferry, four miles west of the town of Lagrange, and it is in a prosperous condition. More schools are needed throughout the length and breath of our glorious State, and if a gentleman should chance to come into the neighborhood to seek for a school, let us not do as some have done and first inquire if he is from the South or from the North. If I entertain the correct notions, we should inquire if the person desiring to teach is well qualified to do so? has he a good moral character? can he govern?—these are the main questions to ask and look after; and when you find a man asking, Did he come from the South or the North? you may soon make up your mind that that man is not a Union man, no true patriot to his country, but a demagogue, or perhaps aspiring after some small office, and would sell his country for a mess of pottage. Good public schools are what we want; we want good ones, and no matter where the teacher comes from—whether from the North or the South, East or West, or from another country—if he or she is competent to teach and govern, let them have a fair chance and no partyism. Let us instruct the young; if we do not, a sin will lie at our door. Those that are now young will soon hold the reins of this great government; on them will the mantles of this generation of statesmen soon fall, and from this time on, let us act nobly our part.

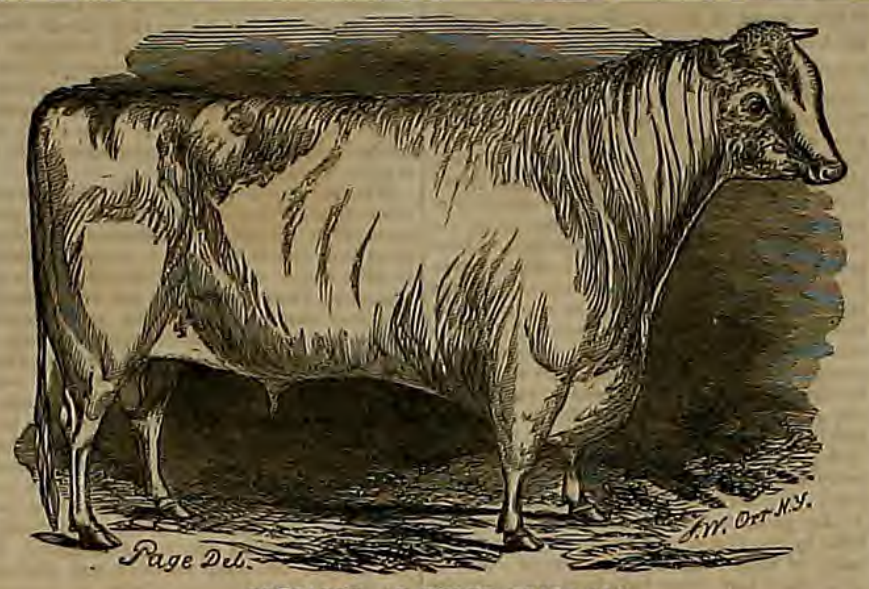
On the Merced, not many farmers read, yet I am sure that I can get ten or fifteen subscribers in the distance of seven or eight miles, and am fully satisfied that many will subscribe soon for the Farmer.

I like to have forgotten to notice Murray's Bridge, across the Merced River. This bridge cost from 12 to $16,000, and is one of the best bridges in the State. Mr. Murray has a good Hotel, and is also a grower of American stock.

From time to time I hear the people speak of the State Fair. They are preparing to be there.

Yours in haste, I. D. Morley.

New Ditch.—The Shasta Republican learns that Messrs. Stoddard & McConnell have undertaken an important ditch enterprise, by which they will convey the waters of Five Mile Gulch to French Gulch and the adjacent mining ground. The ditch will be five miles and forty rods in length, and will be of sufficient capacity to convey twenty sluice heads of water. The proprietors expect to complete the work on the 15th of July. The work will have sufficient elevation to enable them to deliver water to the bed of French Gulch about half a mile above the village.



CRUSADER, AT THREE YEARS OLD.

Owned by R. G. Corwin, Esq., of Lebanon, Ohio. White; calved July 5th, 1852; bred by James Douglass, Athelstaneford, Scotland. Got by Cruside (7938); dam Cracus, by Daniel (5007); g. dam Woodlass, by Homer (2134); gr. g. dam by Stamford (8629).

Coloring of the Skins of Apples and Pears.

Duhamel, in his Treatise on Fruit Trees, says that to encourage the coloring of kernel fruits, it is merely necessary, when they have attained their full size, to remove the leaves which shade them, first from one side, then from the other, and finally all round. He adds, that their color may be rendered more brilliant by marking the side next the sun with a hair pencil dipped in cold water. This passage applies more especially to pears. It suggested to M. de Flotow experiments, the results of which he has detailed in a lengthened article on kernel fruits in general. He selected some favorably situated fruit of the Napoleon, Beurré d'Hiver, B. Diel, Merveille de Charneux, and more particularly of the Poire longue blanche de Dechant, on which he had never observed, at the time of ripening, the least degree of redness, whilst the other varieties had several times exhibited a little red, approaching to yellow or brown. He moistened these fruits in the morning, and repeated the operation several times during the day, when the sun shone upon them; and he continued this treatment as long as the weather permitted. The result of this experiment has justified the assertion of Duhamel. All the fruits thus moistened were remarkable among others of the same variety and on the same tree, by a more brilliant red. The Poire de Dechant, in particular, exhibited a decided red tint, while the fruit usually presents no such appearance.

M. de Flotow had remarked, but without being able to account for the fact, that in apples and pears which were striped on both sides, the rays or stripes were longitudinal, that is, from the eye to the stalk, but never transversely, although he says that in several works on pomology, fruits are figured with the stripes in the latter direction. The results of the experiments have led to the conclusion, that the action of the sun's rays upon the skin of fruits, wetted or moistened by dew, is the cause to which the production of these red bands is to be assigned. If, says he, fruits wetted by dew are observed whilst the rays of the rising sun strike upon them, it will be seen that the moisture collected in drops on the edge of the cavity in which the stalk is inserted, and on the sides, forming lines of moisture, of greater or less length, according to the size of the drops, and according as the sun evaporates them with greater or less rapidity. It will be understood that there must be great differences in the streaking, according as the dews are more or less frequent, according as they are light or heavy, and according to the power of the sun's rays, and the fineness of the skin. It is likewise probable, that the difference between the day and night temperatures has some effect in this respect; and streaked fruits are generally autumn or winter varieties. Pears are seldom streaked, or at least not distinctly so.

To throw some light upon the coloring of fruits, M. de Flotow has tried the action of acids and alkalies upon the skin. The following are, briefly, the principal results of his experiments. Strips of skin, removed from the fruit and cleaned, became intensely red when treated with diluted sulphuric acid; at the same time they yielded a red juice. The color only became brighter and more beautiful, when treated with diluted hydrochloric acid. Ammonia restored the original color. Other pieces of skin having been, in the first place, treated with ammonia, became brown, and their color darkened to such a degree that they appeared black; on the application of diluted sulphuric acid, their natural color was speedily restored. The Pomme douce d'Amérique, which is streaked with bright red and pale yellow, underwent no particular change when treated with sulphuric and hydrochloric acids, the red lines only becoming a little more conspicuous; and, with ammonia, they became of a blackish-brown color.

Whilst leaving to botanists and chemists the explanation of these facts, and several others contained in his memoir, M. de Flotow believes, however, that he can conclude from them, that the matter which reddens the skin of fruits is totally different from the green matter which is also found there; and that it likewise extends to the flesh immediately under the skin.—[Gard Chron.

A Visit to the Sacramento Schools.

Editors Farmer: After a lapse of two years and a half I have again visited the "Queen City of the West." I find the Orleans to be the same good Hotel, under the same good management; but many portions of the city have undergone an entire change within that time. As I strolled southward through Second and Third streets, the beautiful residences and shaded walks carried my mind back to the delightful suburbs of some of our Eastern villages; I found myself constantly attempting to remember if such a grove, or such a garden was not there at my last visit; it seemed impossible to conceive that such a beautiful suburb should have sprung up within so short a time. Nor are the good taste and refinement wholly displayed upon the grounds and exterior of the buildings, as I had a chance of observing, through the kindness of a friend who introduced me to several of the families. Fine paintings and other works of *vertu*, were quite as common as in our Eastern cities. I remarked to my friend that the men of J and K streets must be doing a thriving business to afford such a style of living. "Ah," said he, "that is the difference between Sacramentans and San Franciscans; here the business men expend their gains in adorning homes, there in an increased display of business."

After having sauntered through the streets in various directions, I found myself in front of the High School, and, opportunely meeting a friend, was introduced to its principal, Mr. Hill. Witnessing so much taste in the private residences, I cannot say I was prepared for such an appreciation of the wants of education as I found displayed in this and the other public schools of the city, which I successively visited. The exterior of the buildings present nothing attractive, while several of them appear to be almost destitute of playgrounds. We saw but few maps on the walls, and not a single room, so far, has presented a picture or a flower. The black-boards are small, and made of wood. The desks put me in mind of the days when I used to go to school, a "long time ago," being either so high, or having their tops set at such an inclination, that is is impossible a pupil should assume a natural position in writing or drawing. In one schoolroom we found that the architect had taken particular pains that the tops of the desks should have a fine curve. As yet, I have not found a globe, or any other piece of apparatus for illustrations. One of the teachers informed me that his scholars had offered a reward of two dollars to any person who could give information of the actual visit of any parent to the public schools of this city. Omega.

[To be continued.]

A Fine Garden.—We visited a very fine spot of ground, occupied by B. Richardson, Esq., corner of Howard and Fifth streets, and were surprised to see how much one person can accomplish in a short time. A fine lot of fruit trees, flowers and vines are here growing, and it promises to be one of the finest spots in that part of the city. Mr. R., suffering from an affection of the eyes, wants to find a good gardener for another year, to whom he will give a good chance.

We were shown on Saturday, says the Stockton Argus, a jawbone that must have belonged to one that was monarch of all he surveyed. The teeth in the jaw were still sound, showing no symptoms of decay. One of the teeth measured 2¼ inches one way across, and 2¾ inches another. The jawbone was found forty feet below the surface of the earth, in Tuolumne county. Although the teeth measured so much across, yet their shortness from the jawbone, in comparison to their width, had the appearance of belonging to a young animal. They belonged to a proper animal to feed on the big trees of Calaveras.

The Approaching Industrial Exhibition.

Those who intend contributing to the Industrial Exhibition, to be held in this city on the 7th of September next, under the auspices of the Mechanics' Institute, will be gratified to know that the Committee of Arrangements are energetically at work in making the necessary preparations for the accommodation and fit display of the articles to be contributed. The Bulletin states that the Committee have been tendered, free of charge, the use of the 100-vara lot of Mr. James Lick, bounded by Montgomery, Sutter and Post streets, which is one of the most eligible sites in the city. They will immediately commence there the erection of a building in the form of a Roman cross. This will be after the plan of the Crystal Palace in New York, each arm being 180 feet by 60 feet, covering an area of 18,000 square feet. This This space can be increased, as the necessity of additional room may require. The interior will be fitted up in a style which will add much to the comfort and pleasure of the visitors. In the centre will be placed a large and magnificent marble fountain, which will be constantly supplied with water, and, from its position, command a view of the whole building. Each department of Mechanics, also Agriculture, Horticulture, the Arts, Minerals, &c., will have a separate location assigned it in the building.

From the interest already manifested and the encouragement received from every portion of the State, the Bulletin continues, this bids fair to be one of the greatest exhibitions ever held in California. It will be perceived that the Fair although under the control of the Mechanics' Institute, is not intended to be for mechanics exclusively, but to embrace every branch of industry. Any and every one is invited to add a mite, no matter how trifling; it may not appear much to them, but may prove of great interest to others. The Agricultural Fairs which have been held in the State have done much good in opening and developing the resources of the State, and creating a spirit of emulation among our agriculturists; and we are confident that the present Exhibition, if properly supported, will be of immense benefit to our mineral, mechanical, and other interests. Contributions have already been promised from the East. The gentlemen who have charge of this matter are of high standing in this community, and their names alone are sufficient guarantee that everything will be managed with energy and system.

As the future arrangements are determined on, we will notify our readers. In the meantime, we refer to the programme of the Exhibition which we publish. We look with considerable interest to the part the ladies of California will take in the Fair. In such exhibitions in the East, they have been favorably represented. We hope their contributions to this Exhibition will forever silence the slanders promulgated in the East as to the indolence and want of public spirit of California ladies.

Splendid Collection of Plants for Sale. The celebrated farm and country seat, the residence of T. Cope, Esq., eight miles from Philadelphia, on the Bristol road, with the hot-houses, conservatories, green-houses, &c., and the complete collection of plants, was to be offered for sale on the 20th of May, at 11 o'clock, A. M., and continue till the whole property is disposed of. Mr. Cope will make his future summer residence on his property in Westmoreland county, Pa.

The greenhouses, conservatories, &c., are fourteen in number, and include a cactus house, lily house, orchard house, camellia house, vineries and nectarine house. These are all stocked with the choicest specimens of plants, many of them rare and of large size, particularly the century plant, palms, cactuses, camellias, &c. A pamphlet, containing a description of the houses and some of the plants, by our correspondent, T. Meehan, formerly gardener to Mr. Cope, may be had of the auctioneers, Messrs. Thomas & Sons, Philadelphia.

We regret to record the sale of such a fine collection, fearing it will pass into the hands of some one who may not have the taste and zeal of Mr. Cope to keep it up to its present condition. We trust, however, that among the wealthy gentlemen of Philadelphia, some one will purchase the place, who will maintain it in all the beauty which has given it so high a reputation under the ownership of its present proprietor.—[The Magazine of Horticulture.

The Times.—Are the times hard or easy? In our last issue a gentleman caused an advertisement to be inserted in our paper offering to loan $4,000 on approved security for four or six months. No person has yet made application for the money. The same gentleman is desirous of hiring six workmen. He has been endeavoring to effect this object for about ten days last past. He has not yet found any laborer who is dissatisfied with the character of the work to be done, or the wages offered, yet he has hitherto been unable to find more than two persons who are willing to work. Are these circumstances signs of hard or easy times? It seems that there are none who are in want of money or work.—[Shasta Republican.

Sugar Beet

In California we can raise *two* crops of this root; one before July; one planted in July. Two pounds of seed per acre planted in April, and three pounds in July, soaked as required, will produce forty to fifty, or even more, *tons* per acre. The true *French seed* is best. We copy the following from the Am. Agriculturist, in corroboration of what we have said in favor of this valuable food for stock:

"We cannot too often or too confidently recommend the cultivation of this valuable field crop. It is a greater yielder, hardy, easily raised, and is superior, we think, to any vegetable grown for milch cows and fattening cattle, especially when fed raw. We have grown large quantities for our own use the past seventeen years, and can therefore speak of it practically and experimentally. One of our neighbors, a lady farmer, informs us that she made thirty pounds of butter per week from six cows, in December, fed upon hay and sugar beet. She adds, that the butter was fully equal to the best made in September and October, on rich pasture.

"The Sugar Beet does best in moderately rich, loamy soil, but will grow where any other root does. The seed should be soaked two to four days in tepid water, previous to planting, so as to insure its germination. If planted without first soaking, its shell is so hard it is a long time germinating. Hence the ill success of many who do not take this into consideration.

"For field cultivation the rows should be three feet apart, so as to admit working easily with the cultivator among the rows. The plants, when finally thinned out, should not stand nearer to each other than six inches in the row. It can be pulled and secured in the fall the same as turnips.

"The best variety is the White Silesian, though the French Yellow has been so much improved lately, we are informed it has become nearly as good as the latter. We have never found it to keeep so well.

"The beet requires about four pounds of seed per acre, and can be planted very readily in drills with a seed-sower, costing about eight dollars."

Water—The Value of Cisterns.

The following article (by L. D. Morse, M. D., in the Iowa Farmer) is of great value and interest to those who live in a dry and dusty clime like our own, and the suggestions and facts here presented, of great importance:

Health can as little be supported without pure water as pure air. When either of these fluids are deteriorated by admixture with foreign matters, disease will be a common if not constant attendant. The Ancients were aware of this fact. An old Roman writer informed us that the livers and spleens of animals were inspected in order to judge of the salubrity of the waters and alimentary productions of a country, and to regulate accordingly the sites for the construction of cities. The size and bad state of the above mentioned organs are in fact a pretty certain sign of the insolubility of the pasturage, and the bad quality of the waters. The *rot*, in sheep, for example, is a disease of the liver, and is generated by pasturage on low marshy grounds, and by drinking the water of stagnant pools or ponds. The horse is known to thrive better when supplied with soft than with hard water. The latter gives his coat a rough, unhealthy appearance; and his own instinct prompts him often to drink muddy rain water in preference to very hard well water. The inhabitants of a country exposed to the double influence of bad water and impure air suffer much from disease. Bad air will be comparatively innocuous, if pains be taken to improve the quality of the water.

Painful and unseemly eruptions of the skin, indigestion, and many other complaints have been caused by the long use of bad water, and have been promptly cured by the substitution of this beverage in a purer state.

Water used for domestic purposes is commonly spoken of as soft or hard. The first or soft is rain, snow, or ice water. The latter or hard is generally obtained from wells or springs. The hardness depends chiefly on their holding in solution super-carbonate of lime (chalk), or sulphate of lime (plaster of Paris), or both. A very small proportion of one of these salts is sufficient to give the water the character of hardness, whereby it curdles in place of dissolving, or intimately mixing with soap. River water is hard or soft, according to the nature of the country through which it flows. The purest river water is that which flows over a gravelly surface, with a swift course.

The value and importance of cisterns, in hard water localities, especially, appear to be very much overlooked, as contributing to the health of both man and beast. Again, "everybody ought to have a cistern at his house, or barn, or both, as a safeguard against fire, if nothing else—it is a cheap kind of insurance. Water will put out a fire, and many a fire will be put out if water is plenty and handy." "Therefore, build cisterns. God will give water if man will build vessels to hold it." Your cisterns will often hold water when all upon the surface is dried up, or locked in the embrace of rigid winter. For your own use, it is the healthiest and purest water in the world.

A cistern ten feet deep and six feet wide will hold seventy barrels of water. The best form is to dig a hole the shape of an egg, with the big end down. Such a cistern, nine feet deep, and eight feet in diameter, will hold one hundred barrels of water. If your soil is clay, or any compact earth, you have no need of brick or stone work. Make your mortar a little at a time, as fast as you want to use it, of one part water lime to two parts of coarse clean sand, and plaster right on the earth. When the first coat is dry, put on a second. Two barrels of water lime are sufficient. Cover the top with plank, put in a curb and a pump if you choose.

For family use the cistern should be divided into two compartments by a partition, with small apertures at the bottom. On the bottom of one side should be placed alternate layers of gravel, sand, and coarsely pulverized charcoal. Into this compartment the water from the roof should be discharged. It passes slowly through the filtering materials into the other compartment from which it is drawn for use. Muddy, filthy water, which has been thus filtered, may be drawn as pure and clear as crystal.

The Civilizer.

It is not gold, or silver, or precious stones—it is not agriculture, nor exclusively commerce—it is not republican institutions, great and free as they make men and nations! Spain has dug the gold of the world, and impoverished herself at last. England has dug the iron—she is the banker of all nations. Where iron is made, the gold must go. Iron is the master—gold is the slave! Iron is the very shark of commerce; gold is only the pilot-fish. Men can live without gold, but they cannot dispense with iron. It is in the ax of the frontiersman who levels the forest and opens it to the sun; it is in the marriner's compass, whose magnetic needle turns to the pole; it is in the rifle of the backwoodsman, in the hair-spring of the chronometer, in the nail that holds the clapboard on the houses of hundreds of millions of men; in every plowshare that turns up the soil, in every sword that gleams in the battle-field; it is everywhere under the sun. The world could not go on one year without iron. It could move ages without gold! The subject of iron is inexhaustible—it has no limits. Every hour is developing some hitherto undiscovered element or application in this tremendous agency of Nature. One of the most striking applications of it has been witnessed as a building material. The crude iron building is an European invention, but American genius perfected the first dim conception; and the age is just on us when great cities will spring out of our iron mines, and flash forth every classic form of architecture in enduring iron! We have had two New Yorks, and now we are going to have a third. The first was built by the Dutch of bricks; the second was made of stone; the third will be of iron. A good many hard things have been said about the late Administration, and probably most of them were deserved, but the country is indebted in no small degree to Mr. Guthrie, late Secretary of the Treasury, and Mr. Bowman, head of the Bureau of Construction, for the elaborate investigation they made of the whole subject of building materials in connection with some of the public edifices. They chose iron, and it would be hard to believe that any Administration that succeeds them will be induced to go backward when the whole Republic, by irresistible impulse, is crowding on to the great future. We might here remark that in Mr. Guthrie's investigation he chose a new invention, which is being successfully applied in the construction of the Marine Hospital at New Orleans. This invention is known as the "Pise Iron Building," and from the Government report we learn that the invention consists of imbedding the columns of the exterior walls of iron buildings in a cheap non-conducting preparation of common earth, water and straw, by which the inside wall (which costs very little) is supplied for the iron skeleton. The iron shell is made in the usual form, with the panels or outside plates thrown back a few inches from the columns or frame-work—thus interposing non-conducting substances between the point of contact to prevent (as in iron safes) the transfusion of heat from the exterior plates to the interior of the edifice. It has been found by many experiments that iron buildings, like iron safes, may be partially preserved in intense fire, and may preserve their contents, but they themselves are ruined in the process. The invention which we have alluded to, which the Government has taken up, and which we have partially described, is one which can be applied with extreme economy in the whole system of domestic architecture. The thin external framework of an iron building of the most beautiful style of ornamental architecture can be made very cheap; but it absorbs heat and admits cold to such an extent that it is impossible, in our climate, to live inside such buildings. This invention remedies that defect entirely, and preserves a more equal temperature than has ever been obtained by any other process. The facts presented to the Government and the report on the subject would seem to settle this question. We rejoice in this as another triumph of the genius of our countrymen in the mechanic arts. The wizard wand of empire has been transmitted through a hundred nations. The Egyptians held it by science; the Greeks, by art; the Romans, by the sword! England has held it by iron! but her power to produce iron is not increasing in proportion to the demand; it never can. Her empire is passing away; the scepter is moving over the Atlantic. America has long enough been buying English rails to lay over her own iron and coal beds. But this will stop. The Briarean arms of this Western Hercules are being wielded to drag up from the reluctant earth its deep-hidden treasures. The best genius of the world is here, or will come at our bidding. It should be the business of this Republic to award premiums, in every department of exertion, to the mind that creates. The consumer is the drone in the hive; it is only the man that does something, that is worthy of the name of citizen! Favoritism here should not make men of puppies, who can live only by sucking the roaming wolf of the West. Partisans are clamoring for a protective tariff; but this means, at best, only a premium offered to idleness and stolidity. There is protection enough in the laws of God and the course of Nature to every true worker—to every true creator—to every good, original thinker. It is so of every art. With the inexhaustible resources of this continent, to go whining around Congress for a bill of protection for men who cannot outstrip the world is mean and contemptible. Providence is substituting something better than any Congressional laws for protection. We are dragging from the earth, the forest, the sky, and the ocean, materials with which the arm of industry, guided by the inventions of genius, will enrich the nation beyond the dreams of avarice.—[U. S. Magazine.

The Sugar Cane.—We are pleased to see the statement that "the agricultural bureau of the Patent Office has made arrangements for the introduction and cultivation of sixteen or more varieties of the *sorghum sucre*, or sugar cane, and sincerely hope the experiments which are now being so extensively made with this new plant may prove successful. If we can raise our own sugar and molasses in Maine, or even the molasses alone, it will prove an invaluable acquisition to our crops.—[Maine Farmer.

Camphor a Remedy for Mice.—Any one desirous of keeping seeds from the depredations of mice, can do so by mixing pieces of camphor gum in with the seeds. Camphor placed in drawers or trunks will prevent mice from doing them injury. The little animal objects to the odor, and keeps a good distance from it.

How to Get Dyspepsia, and How to Cure it

E. J. TO HIS FRIEND M. E. P.

New York.

My Dear Friend: I am sorry to learn, as I do from your last letter, that you are "not quite well, and suffer from certain unmistakable symptoms of dyspepsia." This is unpleasant news; but I trust you will not allow your ailments to become chronic. Let it be your first care, my friend, to get well; and then see to it that you *keep well!*

You ask me to prescribe for you. I am not a physician, and am no more familiar with the laws of health than you are, or *ought to be*. They are plainly written on the vital organism, and if we are ignorant of them, we are willingly so. But, alas! we know more of the mechanism of the stellar universe than of the structure of our own bodies! How little heed do we give to that old and wise injunction: "Know thyself!"

Health is the natural state of the human system. If disease invades the vital domain, there is a constant effort on the part of the system to expel it. In this, if we do not unwisely interfere, it generally succeeds. But disease generally enters the fortress of life through some act of treason on the part of its garrison. In other words, we are the authors of our own misfortunes in this as in other respects.

Whence come, in your case, the stomachic disorders of which you complain? You have a good constitution. There is no hereditary predisposition to dyspepsia, as there is in many persons. In what way or ways are you accoustomed to sin against your own body? Do you sleep in an ill-ventilated chamber, and neglect your morning bath? Do you rush down stairs and bolt, in haste, a breakfast of hot biscuits, or buckwheat cakes, saturated with butter, and washed down with three cups of strong coffee? Do you take a cigar? but I beg your pardon, I know you have not *this* sin to answer for. Do you eat roast beef, with plenty of greasy gravy, and other condiments, for dinner, and finish off with plum-pudding, covered with wine sauce, and smoking hot? Do you eat hot biscuits or muffins, and drink a cup or two of strong green tea for supper? Do you exercise the brain too much, and the body too little? I need not go on with the enumeration. Of which of these, or of what other transgression, are you guilty? Disease, like every thing else, has its cause.

Ascertain the causes of your illness, and remove them at once; this is the first step toward a cure, and will, perhaps, be sufficient. Nature will do the rest, if not too much fettered by unfavorable conditions already induced. It may, however, be necessary to abstain almost entirely from eating for a time; to drink plenty of soft water; to bathe and rub yourself frequently; to take a good deal of moderate exercise in the open air, and to let your brain as well as your stomach *rest*.

You know my opinion of drugs; avoid them, by all means. Trust to the recuperative powers of your own system, aided by abstinence, exercise, and bathing, and you will soon be well. When your stomach has regained its healthy tone, begin to eat moderately of plain, wholesome food, and, unless you would invite another attack, carefully avoid the causes which have led to the present.

You have my prescription. Dr. Pillsbury will give you a very different one, no doubt, if you apply to him. Choose between us. In one thing, at least, mine has the advantage—it costs nothing.

Hoping to hear of your speedy recovery and continued prosperity, I remain,

Very truly, your friend, E. J.

M. E. P., New Orleans.

[From "How to Write."

When does Wool Grow?—I answer, when it is wanted to cover the sheep and keep it warm. From the time the sheep is sheared until the frost comes, you can see the shape of every clip of the shears; when the frost and cold weather comes, it grows out immediately. Now, if you wish for a heavy clip, feed when the wool is growing. If you have any extra feed, then is the time to use it. The wool draws very hard upon the carcass and growing out fast deceives almost every farmer. They think their sheep are doing will when they are growing poor. I can make an additional pound of wool with one bushel of corn, and my sheep will afterwards winter one bushel of corn easier. Let your sheep get poor while the wool is growing and you cannot recruit them until the next summer.—[J. D. Chamberlain, in Genesee Farmer.

Beans for Sheep.—Bean straw is valuable for sheep, and when properly cured they eat it with avidity. In a chemical analysis of beans it is found that they abound with a greater quantity of the elements of wool than any other grain or vegetable, to make sheep produce heavy fleeces. They will eat them with avidity, whole or ground, even in a damaged state. To our store flocks during the winter season we generally give a pint of beans per day, and potatoes. Corn is good for fattening sheep, but not so valuable as beans, peas, oats, and most other grains, for the production of wool.—[Wool Grower and Stock Register.

Large Sale of Fayette Cattle.—In April last, Thomas H. Shelby, of Fayette, Ky., sold a lot of 120 head four year old beef cattle, very fine animals, to Mr. J. W. Taylor, at $9 per hundred net. They were purchased for the New York market, and in the form of steaks and roasts will cause many a thrill of delight among the good livers of Fifth Avenudity.

Maneless Horses.—The Persian Ambassador at Paris, Ferouck-Khan, has just presented to Louis Napoleon, four Arab horses of the purest blood, from his master the Shah. Their peculiarities are two—that they are larger than any blood horses hitherto seen, and that they have no manes. Paris was very much delighted with the beauty of these animals.

A farmer, near Binghampton, N. Y., last year, in order to convince a neighbor of the usefulness of birds, shot a yellow bird in his wheat field, opened his crop, and found in it two hundred weevils, and but four grains of wheat, and these four grains the weevils had burrowed!

Corn Scarce.—The crops in Greensville county, Va., are said to be in a sad condition, and the people are purchasing corn for food purposes at the rates of $5 and $6 per barrel. This, in Greensville county, one of the richest agricultural counties in Virginia, is a sad state of things.

Sale of a Jack.—Mr. Robert E. Miller, of Bourbon county, Ky., not long since sold his imported Jack to a company of Madison county for $2,250.

Sale of Sheep.—J. B. Fowler, of Harrison county, Ky., recently sold to Mr. Hopkins, of Shelby county, one hundred head of sheep for the large sum of $1,000.

Shall San Francisco be the Great Entrepot of the Whale Fisheries of the Pacific?

The following very important letter from the master of the bark Alice Frazier, published in the New Bedford Shipping List, is of the highest importance to the merchants of San Francisco, and to the whole Pacific coast; and feeling the interest we do in the prosperity of California, and having often advocated measures and published valuable data relative to this subject, we now take large space to lay this matter before the merchants of San Francisco particularly, and hope the truths here presented will awake them to duty:

Bark Alice Frazier, Falta, Jan. 10, 1857.

Mr. Editor: Within a few years past there has been much said in the various newspapers in the whaling interest, relative to which is the most desirable recruiting mart for the North Pacific whaling fleet—San Francisco, or the Sandwich Islands. There are many points at variance, and I propose to solve them from a thorough and practical knowledge of both places. I have been a frequenter at the Islands since 1841, and profess to know them root and branch. And after several years of unavailing trial to learn something definite of San Francisco from the few transient ships visiting there (some masters speaking for, and others against the place), I have at length made a thorough test for myself, and through the valued columns of our Shipping List, would impart the full extent of my knowledge and views to my brother spouters throughout the fleet. I propose to give them the entire facts as they transpired with me, that they may judge for themselves. Also, to advance my own views as they have become developed, for the benefit, and at the request of many masters and people connected with both ports.

It has been currently reported, so as to gain credence through the fleet, that we cannot retain our men at San Francisco as we have been in the habit of doing elsewhere. It is not so. I have thoroughly tested this matter, even against the convictions of half the legal fraternity and courts at law, and in the face of a general discouragement from many of the most intelligent shipmasters and merchants of San Francisco. They judge the whalemen's case by the many defeated efforts of the merchantmen. The difference is in this: Nearly all the merchant vessels clearing from home ports for San Francisco, clear from the home custom-house under their *original* Articles, which constitutes a domestic voyage only; hence they cannot compel their crews to go beyond San Francisco, as they have adhered to the ship to the extent the law demands by their contract. It is useless to produce Articles showing the men have shipped "to perform a voyage to San Francisco, and *elsewhere*;" for the laws do not compel seamen to go from domestic ports upon a foreign voyage when sailing under original Articles.

But with the whaleman, who always has certified Articles, it is different. We never sail from home ports under original Articles, but, going forth as we do upon a foreign voyage (to the Pacific and elsewhere), sailing under duplicate Articles certified by the Collector of Customs, depositing the original in the custom-house, it follows that, go where we will, into this port or that,—foreign or domestic—the true interest of the voyage is not fulfilled until the ship returns back from whence she came.

Under this belief, I dropped anchor in San Francisco in the month of November last, intending only to lay a few days to get my recruits and obtain a few small stores, and, perhaps, to ship my sperm oil should chance occur. While at supper, some five hours after having come to anchor, with one of those migratory officers on the lookout whom every ship is apt to be cumbered with,—promoted perhaps for their whaling qualities, but totally irresponsible as an officer—a boarding-house landlord who had a sailboat alongside for the purpose, took off nineteen of my men entirely unknown to the gentleman with the beaver on, who was gazing with a marine glass at the fort and the shipping around with all the innocence and curiosity of a country schoolmarm. I came from the cabin, and seeing the boat gone, put a glass upon and saw at a glance the several heads of my men peering over the gunwale; called the officers from supper, cleared away a boat in chase, with orders, if unsuccessful, for the mate to go to the Chief of Police and demand the arrest of the deserters. The chase proved of no avail. The men landed and soon dispersed through the town, even before my boat could reach the shore. The application to the Police proved of as little import, for the chief declined arresting them without a warrant, and was unable to tell the proper place to apply for the required warrant. On application to the Police Judge (Coon), he had doubts of being able to help me in the matter, thinking it out of his jurisdiction; but with a courteous spirit of accommodation, promised to study my Articles and take time to consider the case, as to the legality of an arrest. On arresting his attention at Section 7th, of Act passed July, 1790, he thought a doubt no longer existed. Some days after, while Judge Coon was giving orders for the warrant I had demanded, I employed Geo. W. Baker as my legal adviser,—the ex-Judge of Police Court—who was thought to be conversant with the marine law. Mr. Baker soon convinced Judge Coon it was not in his jurisdiction to arrest my seamen, having once undertaken the thing himself and failed. He advised my applying to the U. S. Commissioner (Johnson), who at first declined acting, until we read to him the above mentioned Sec. 7th, whereupon he concluded to give us a warrant for the U. S. Marshal to arrest certain of my seamen, most of whom had already shipped in the merchant service and gone to sea during the delay caused by the utter ignorance of almost every one applied to upon marine law, as regards deserters.

Several days having passed, I had already opened my new Shipping Articles and partly shipped a new crew; and finding men so plentiful, I only proposed testing the matter of arresting deserters upon a few of my best men. One of my boatsteerers, a prime forecastle man, had shipped on board the Borodino, from the same office where I was shipping my new crew, such was their confidence in the supposition that they could not be arrested for desertion. The Borodino was at that moment in the stream with her topsail yards hoisted aloft, her yard-arms loosed, with fair wind and fair tide, awaiting the arrival of her master, to sail for Callao. I proposed to the Marshal to take those two men, as being the best available test we could make, except we went on board the man-of-war where four or five of my seamen had donned their blue shirts and clean faces, amounting to quite a disguise.

After some little detention from the men having been stowed away, on seeing us coming, the mate of the Borodino, a gentlemanly fellow, dug them out from their hiding places, and the Marshal quietly made his arrest and we took them before the Commissioner to prove property and put them on board my vessel in irons.

While the men were yet retained in custody by the Marshal, awaiting the leisure of the Commissioner, a lawyer of the place, one I. B. Manchester, made his appearance and began to be inquisitive to learn what we were going to do with those sailors. I knew him instantly by the previous description given of him. Proposing to learn his intentions, I immediately accosted him, demanding to know if he was inclined to make me trouble about the arrest of my seamen. Before answering my query, he wished to know who I had employed as counsel; who advised me to the step taken; and finally, who had the profound ignorance to issue a warrant for the U. S. Marshal to arrest deserters? I had been repeatedly told that Mr. Manchester was one of the most profound marine lawyers in the city, and from the utter ignorance I had found elsewhere, I proposed conciliating this gentleman and testing his marine knowledge. Among other things, he told me he could prove instantly that even the present arrest was illegal, and that too by precedents which had come up for trial under that same roof we were then under. Furthermore, that men put on board under this arrest could be got out before night under the Habeas Corpus act. I demanded proof, and promised future employment for him should any more cases occur. He directly took me into an adjoining library and producing the 2nd vol. of California Reports, turned to page 144, Exparte Lewis Crandell, where Justice Hydenfeldt delivered the opinion of the Court, and where it was proved in the case of a deserter from the ship Hornet, that Justices of the Peace *alone* could commit and try deserters.

Thus every word Mr. Manchester had told me was proved true, and within the next half hour I gained more shrewd, profound knowledge of the substitutes of marine laws than I had ever been able to attain before. This gentleman had long practiced at the New York bar; and from my own experience of his abilities in marine law, I would advise our masters frequenting that port to employ him in all their pettifoging cases connected with sailors, in preference to any other.

Thus it will be seen from my own experience and cases found in California Reports, that we should apply to Justices of the Peace alone for the arrest of deserted seamen, in which case only they cannot be again taken out under the Habeas Corpus act.

The only remaining law case I was troubled with, was that of one of the men who attached the day previous to my being ready for sea, in a suit to claim his voyage upon demanding his discharge, which I declined giving. The gentleman came down to the ship drunk one night, when the plank connecting the ship with the wharf not being of that meandering, sesaw curve which geometrically applied to his gait, his under independence of circumstances led him to insist upon maintaining his serpentine way on board, when he misstayed on the point of tacking and fell into the dock. On the strength of the slight hurt he received under these circumstances, after having deserted the ship for several days and engaging to work in a distillery on shore, he demanded his discharge. I pronounced him a deserter, and declined having anything further to do with him. He seized the ship, which a few hours sufficed to redeem again, by bringing two merchants to give bonds to the amount of $1,500. When, after giving in the mate's and my own depositions, we sailed, leaving the case for future trial.

Seamen were as easy got as at the Islands; as I obtained a full crew of the heaviest men I have ever had, and upon more favorable terms of shipment. Lays from 150th to 170th; carpenters, stewards, &c., 130th, with advances of from $15 to $30. There was also a good show of boatsteerers and officers.

Now let us see the relative benefit to be derived from either port in the great contending matters of exchange, recruits, commissions or disbursements, freighting oil and bone, and on sales of oil, harbor dues, and the ease of access to and from all the great cruising localities in the Pacific. First, in the matter of exchange at San Francisco, I found Whaleman's Bills worth a premium of 2½ per cent. And as the West must always remain in debt to the East in money matters, it follows that good Bills would probably always sell from the above rate to par value. While on the other hand, the mean discount at the Islands for the past several years is about ten per cent. The charges on my disbursements was 2½ per cent, which would have made my bills of exchange netted at par, had I been drawing money there. Commissions on sales of oil 5 per cent., with the sale guaranteed; or 2½ otherwise. Commissions on freighting, 1 per cent., though masters may freight their oil themselves, as well there as at the Islands, except they leave it behind for others to freight after their departure. These commissions, it will be seen, about balance the cost of exchange at the Islands, where there are none whatever to pay.

It will be seen by reference to the subjoined tables of harbor dues, recruits and cash to crew, comparative between the two places, that as it stands, the balance is somewhat in favor of the Islands. Yet where a ship is purchasing provisions, slops, whale line and gear, the balance would turn greatly in favor of San Francisco. I purchased towline at 19 cents from Tubbs & Co.'s new rope walk, made in the best manner, of the choicest material imported from Manila. While at the Islands the prices range from 25 to 35 cents. I also purchased slops, chain and anchor, and craft for one hundred per cent. less than they are ever got at the Islands.

Vessels can be repaired in the dry dock, up the bay, at very reduced rates, as may be seen by the published list of prices.

For the locality of San Francisco is connected by easy access to our whole extent of whaling ground, it offers the same advantage in the fall season, which the Sandwich Islands afford in the spring. Quicker passages can be and are made from all our northern whaling grounds to San Francisco, than to the Islands. I have been from Kodiak to San Francisco in ten days. From Kamschatka Sea (land to land) on my last passase, in fifteen days; and should set the passage from the Ochotsk to be about 20 days. From San Francisco we have the entire command of every whale ground in the eastern board of the Pacific; consisting of the California ground, seven days sail; Gallipagos Islands, one month; the Line, off Shore, and all the more southern grounds. These grounds can only be attained to from the Islands by the tedious method of tacking out through the trades into the variables, to make eastern, at the expense of from thirty to forty-five days time. But in the spring, the Islands are much the most easy of access to any ship coming from the south, leaving her in the same weatherly position to the northern grounds which San Francisco is to the southern grounds in the fall season.

But summing all the favorable points connected with San Francisco, a ship should not be induced to go there except they have a good catch of oil

on board, that it may pay to let the crew run, when it becomes cheaper to ship a new crew than to arrest the old ones. Though it has been seen that we may arrest them in spite of landlords and lawyers, and have them confined, or put on board at our discretion. Yet, it is not with the same ease as at the Islands, and upon this coast, where we have but to call a *kaiko*, or native constable, and have the deserters secured or put on board. But there is a certain formula to be gone through with, which becomes both tedious and expensive when applied to a whaleship's company. It cost me upwards of $30, to arrest and put on board two deserters. It would have cost me between $50 and $75 to have shipped two equally as good men; including advance, five dollars for shipment, &c. It should be understood that it will not do to arrest deserters where there has been any corporal chastisement, as the same trouble and expense would arise as at home.

Those not having oil enough to wish to run the risk of losing their crews, can anchor on the bar outside of the Golden Gate heads, in from six to eight fathoms water, from three to five miles off shore. Whoever, taking one of the many pilot boats around, they can procure their recruits in two days and be ready for sea again in twenty-four hours. The great objection to this, however, is that where a ship has been out on a seven months cruise—as was my case—it becomes both necessary and prudent that the men should have a run on shore to counteract the latent scurvy which may be supposed to be lurking in the system; though Cape St. Lucas may answer the purpose.

There are four light-houses in and around San Francisco, leaving it easy for the most timid navigator to go in night or day. Coming on the coast, make the south Farallone Rock, lat. 37° 41 N., lon. 122° 50 W., on which is a revolving light plainly seen twenty miles in every direction, around the whole sweep of the horizon. Steer from the Farallone light N. E. by E. ½ E. (by comp.) until you make the first high light on Bonita point (the north head of the entrance), a fixed light, as are all but the Farallone—keep Bonita light bearing N. E., until you make the light on Fort Point (the south head), which you are to bring in range with the light on Alcatraz Island beyond, and steer in, which clears the Mile Rocks (some 20 feet above water) laying about one mile S. W. by W. (comp.) from Fort Point. Give Fort Point a good berth as you pass in as the strong eddies on either side of it trouble ships in light wind, though other dangers only extend out a few ships' length. Steer down the bay, keeping Alcatraz open on the port hand until you find anchorage near the shipping.

It is safe to know that the currents do not set directly in and out of the entrance, but the flood tide sets up the south shore, sweeping across the entrance before it turns in; while the ebb, in setting out, turns short around the Mile Rocks and Point Lobos, down the south shore. Consequently, in light winds, ships will be set past the entrance to the north by the flood tide; when, after the harbor lights are shut in, steer to the south, if there is a wind, to open them again; or, if calm, come to anchor on the bar, to avoid the Duxbury Reef making out four miles from the north shore, being about six miles from Bonita light. The soundings in the passage are from 15 to 25 fathoms, between points Lobos and Bonita, deepening to 45 and 55 fathoms, along through the entrance until you pass Fort Point, then shoaling again to from 7 to 15 fathoms, as you pass in. There is 12 fathoms inside of the Mile Rocks, and they are Safe to approach.

The firm of McRuer & Merrill, Nos. 47 & 49 California street, is one of the most accommodating and reliable houses adapted to the use of sealing masters, and I take pleasure in recommending my brother whalemen to their consignment, in preference to any I know of. I found their charges under that of any other house I inquired of. In matters of advice about the shipment or sales of oil, Mr. Asa T. Lawton has the largest experience and the most profound knowledge of any man in California, and is possessed of that spirit of accommodation and courtesy of manner which always leaves him easy of access to any master requiring his advices.

Scott & Ellis are among the best shipping-masters in the place—men that may be entirely relied upon and who have shipped most of the whaling crews heretofore shipped there. The usual rates of shipment, are five dollars per man; advance given upon advance notes, so that where the seaman deserts after shipping, it becomes no loss to the master.

Table of Expenses at San Francisco.

HARBOR DUES.

Pilotage in and out, per foot, -	$1 a $25 00
Custom House fees, entrance, clearances, manifests and recruits,	3 00
Dock masters fees, per ton, -	4 a 16 25
Commissioner of emigrants fees -	3 00
	$48 25

RECRUITS.

100 bbls. Irish potatoes, at $3 75 -	$375 00
10 bbls. sweet do. at $5 -	50 00
100 heads cabbage, at $8 - -	8 00
100 pumpkins, at $25 - - -	25 00
10 bbls. onions, at $3 50 - -	35 00
1000 lbs. fresh meat, at 12½c -	125 00

C. M. NEWELL,
Master of Bark Alice Frazier.

If betting is immoral, how can a man who sells be any worse than the one who is no better?

Miscellany.

"HOE OUT YOUR OWN ROW."

One lazy day a farmer's boy
Was hoeing out the corn;
And moodily he listened long
The hear the dinner horn.
The welcome blast was heard at last,
And down he dropped his hoe;
But the good man shouted in his ear,
"My boy, hoe out your row!"

Although a "hard one" was the row
(To use a plowman's phrase),
And the lad, as sailors have it,
Beginning well to "haze,"
"I can!" said he, and manfully
He seized again his hoe,
And the good man smiled to see
The boy hoe out his row.

The lad the text remembered,
And proved the moral well,
That perseverance to the end,
At last will nobly tell.
Take courage, man! resolve you can,
And strike a vigorous blow;
In life's great field of various toil,
Always hoe out your row.

The Lie.

"Children and fools always tell the truth" is an old adage, which people quote when they wish to make out a case to suit their own purposes. We often hear it said again, "Children will always lie," and it is an expression from which we recoil as a slander upon the bright, beautiful class whose transparent souls reflect the celestial arcana. Children never lie unless some brutal man, or vixenish woman, has terrified them into the cowardice of falsehood—or each, by their own lives, akin to that of the fox, have perverted their heaven-born instincts. It is the nature of the child to be out spoken and truth-spoken. Even when the product of weak and badly organized parents, the child's face tells the truth while its instincts may tend to the false. We have seen a poor little thin-faced child with a lie upon its lips, when every nerve in its fine body was in a tremor, and its poor eyes were cast down, and a paleness—more truth-telling than a blush—rested upon its cheek, while the veins of the neck throbbed visibly.

Poor innocent—for it was innocent—how our heart ached for it! How gladly we would have wiped out the stain from its white soul! How gladly would we have stilled its perturbed nerves, and carried it up into the white lights of truth and beauty and divine peace. The sin did not rest with the child. "Woe unto him by whom the offense cometh." The child who has been taught in any way to lie, either from fear or by the ill example of those about it, is a transformed being. His whole nature has touched the confines of chaos. His smile has lost its freshness and candor; his cheek glows less loyally from the heart, and his hand has an uneasy, uncertain grasp, while the eye wavers from side to side.

Well may all these charges follow falsehood. "God made man upright." Our whole being is based upon truth. The nerves and muscles of the body respond to it, as truly as the true heart thrills to it. Your candid man is your brave man—your out-spoken man is your true man. He who has nothing to conceal has nothing to fear. He who honors the laws of his own being fears no creature living, for God has made the whole brute creation subordinate to the man or woman, and hence the beautiful story of Una and her snow-white lamb, and of the lion crouching at the feet of the true virgin.

The liar is a solitary man at heart. It is the nature of falsehood to isolate, for he who cannot be trusted is to be avoided. The worst penalties of the demons must consist in their perpetual distrust; hence we opine that, bad as the office of the infernals may be, to distribute error and to sow the world with falsehoods, they must be condemned to speak truth with each other, else their compact for evil would close.

The whole universe rejects the lie. It is tossed from nook to nook, crying to the rocks for shelter, but even they refuse to hide it, for they are held allegiant, atom by atom, by the eternel laws of truth, in all affinities. We are created for the truth from the very center of our beings—the blood mantling, the pulse beating, and the conscious eye attesting to the spirit within us, whether it be true or false, and so every created being is made to be a co-worker with God for the evolvement of this divine element. Were it otherwise, a miracle would be daily required to hold the world in its place.

We are all created with an exact adjustment to the truth, and it is easier for us to adopt it, and to speak it, than to take the tortuous path of error or deceit. Our sympathies instinctively go out to the candid man, while we as instinctively recoil from the false one, which is proof enough that God designed us for the truth, and not for the lie.—[U. S. Magazine.

Confused Idea of Names.—Three wild mudlarks were recently captured by a young divine, and brought into a Sunday School in New-York, where they were severally questioned as follows:

"What is your name?"

"Dan," replied the untaught one who was first interrogated.

"Oh, no, your name is Daniel; say it now."

"Daniel."

"Yes; well, Daniel, take your seat."

"And what is your name?" was interrogated of number two.

"Sam," ejaculated the urchin.

"Oh, dear no, it is Samuel; sit down, Samuel. And now let us hear what your name is, my bright little fellow," said he, turning to the third.

With a grin of self-satisfaction, and a shake of the head that would have done honor to Lord Burleigh, the young catechumen boldly replied, "Jimuel, your honor."

To make a horse feel good and have fine hair the following recipe is given:

R— Take—

Brushus et curricomus -	Ad libitum.
Elbow greasus - - -	Quantum suff.
Blanketisus - - - -	Firstratus.
Stabulus - - - - -	Never say dietus, but mealus et otus.
Exercisus - - - - -	Non compromisus.

The effect of the above is truly wonderful. It results in—coatus shinus, appetitus wolfitus, muscularitus two-forty-itus.

Conscience is a curious commodity. It is warranted to stretch; and though it will not exactly wash, it will turn perfectly well, and often nobody can tell when the "seamy side" is without or within.

"Did you ever go to a military ball?" inquired a lively girl of an old soldier—"No, my dear," replied the old Revolutionary; "in those days the military balls came to us."

Why "Brudder Dickson" Left the Church. Mr. Dickson, a colored barber in one of our large New England towns, was shaving one of his customers, a respectable citizen, when a conversation occurred between them respecting Mr. Dickson's former connection with a colored church in the place:

"I believe you are connected with the church in Elm street, Mr. Dickson," said the customer.

"No, sah, not at all."

"What! are you not a member of the African church?"

"Not dis yeah, sah."

"Why did you leave their communion, Mr. Dickson, if I may be permitted to ask?"

"Why, I tell you sah," said Mr. Dickson, strapping a concave razor on the palm of his hand. "It was jess like dis—I jined dat church in good faif. I gib ten dollars toward de stated preachin' ob de gospel de fuss year, and de peepil all call me Brudder Dickson. De second year my business not good, and I only gib five dollars. Dat year de church peepil call me Mr. Dickson. Dis razor hurt you, sah?"

"No, razor goes tol'bul well."

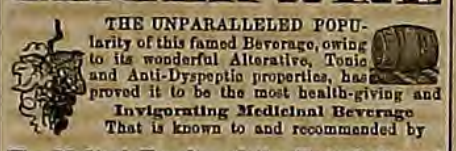
"Well, sah, de third year I feel very poor—sickness in my family—and I didn't gib nuffin for preachin.' Well, sah, arter dat dey call me ole nigger Dickson, an' I left'em."

So saying, Mr. Dickson brushed his customer's hair, and the gentleman departed, well satisfied with the reason why Mr. Dickson left his church.

Early Marriages.—A woman who was brought before the magistrates of Wigan, for an assault committed upon a neighbor, affords a striking instance of recklessly early marriages. She is the wife of Patrick Casey, a tailor. They reside in Douglas Terrace, Wigan. He is forty years of age, and she is twenty-nine. They were married before she had attained the age of fourteen years and seven months. Since that time she has had eleven other children. Strange to say, the eldest girl, who is just fifteen years old, is the mother of two children, the elder of whom is nearly two years of age, she having married earlier in life than her mother. Mrs. Casey is, therefore, at the age of twenty-nine years, the mother of twelve, and the grandmother of two children.—[Manchester Guardian.

Go it strong when you advertise—business is like architecture—its best supporters are its columns.

TURNER'S
GINGER WINE



THE UNPARALLELED POPULARITY of this famed Beverage, owing to its wonderful Alterative, Tonic and Anti-Dyspeptic properties, has proved it to be the most health-giving and
Invigorating Medicinal Beverage
That is known to and recommended by

The Medical Faculty of the United States!

The superior facilities the TURNER BROTHERS possess, owing to their having in New York city, Buffalo, N. Y., and in San Francisco, the

Most Extensive Manufactories in the World

For the preparation of

GINGER WINE;
AROMATIC SCHEIDAM SCHNAPPS;
EXTRA RASPBERRY SIRUP;
SPICE AND WORMWOOD BITTERS;
ESSENCE PURE JAMAICA GINGER;
TURNER'S STOMACH BITTERS;
SUPERIOR RUM SHRUB;

And all other Sirups and Cordials in use.

They can defy competition, by making from the BEST materials, the greatest quantities of the various articles that bear their name. Their celebrated and superior

GINGER WINE

Is now so well known that no similar beverage can find consumers where it is in the market.

TURNER'S

AROMATIC SCHEIDAM SCHNAPPS,

Prepared with great care, and put up expressly for this market, is composed of the best

SCHEIDAM GIN,

Warranted to be the pure Juice of Juniper Berry.

TURNER'S EXTRA RASPBERRY SIRUP

Has been confessed by consumers to be the best article in use, as it is made from pure Raspberries, gathered in New York and New Jersey expressly for them.

TURNER'S RUM SHRUB,

Prepared with great care from the best Jamaica Rum and Sugar and other materials, and is warranted equal to the best London Shrub.

Turner's Spice and Wormwood Bitters

Need only to be tried once to be properly appreciated and acknowledged as the best Bitters in this State.

Turner's Stomach Bitters

Is a preparation that even the best connoisseurs cannot deny is "first rate."

Turner's Essence of Pure Jamaica Ginger

Cannot be equaled by any preparation in the world, and the best test of its extra qualities is, that it can be found in almost every public and private house in the United States. To protect them from imposition, consumers of Ginger Wine manufactured by us, will find our portraits in a circle, on a steel plate, surrounding the inscription: "Turner's Ginger Wine, prepared and sold by Turner Brothers, New York, Buffalo and San Francisco, California."

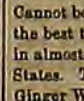
Splendid Merino Stock.



THE value of MERINO SHEEP, and all fine wool-producing Sheep, is beginning to be appreciated; and, from the experiments already made, it has been ascertained beyond a doubt, that Sheep raising will prove one of the most important branches of domestic industry on our coast, as well as the most profitable. The finest grades of Sheep are easiest cared for; the most productive, and pay the best, as fleeces of the common breed of Mexican Sheep produce 2, 2½ or 3 pounds, and sell at from 12½c. to 18c. per pound; while the finer Sheep yield 4, 5, 8 and 10 pounds each, and often more, if clean washed, which sells more readily and commands 40c., 45c. and 75c., thus far outstripping, in value and productiveness, all other kinds, and all idea of raising hereafter the common breeds of Sheep.

The undersigned having fully tried the experiment and proved the above, and having a few very fine Merino Sheep for sale, now offer some fine Bucks and Ewes from the flock that have verified the above facts, as the increased character of the Sheep and Wool produced the past year will prove.

Persons wishing to purchase of this kind of Sheep, can learn all the particulars and price, by addressing the undersigned either at Sacramento (where the Sheep can be seen), or at San Francisco.

GEO O. WHITNEY & CO.,
115 and 117 California street, San Francisco;
Corner K and Fourth streets, Sacramento.

BOOKS, &c.

The Fruit Garden.

By P. Barry,

Of the Mount Hope Nurseries, Rochester, N. Y.

A TREATISE intended to illustrate and explain the Physiology of Fruit Trees; the Theory and Practice of all operations connected with the Propagation, Transplanting, Pruning and Training of Orchard and Garden Trees, as Standards, Dwarfs, Pyramids, Espaliers, &c.; the laying out and arranging of different kinds of Orchards and Gardens; the Selection of suitable Varieties for different purposes and localities; the Gathering and Preserving Fruits; Treatment of Disease, Destruction of Insects; Description and Use of Implements, &c. Illustrated with upward of 150 Figures, representing the different parts of Trees, all Practical Operations, Forms of Trees, Designs for Plantations, Implements, &c. 1 vol., 12mo., cloth. Tenth Thousand.

HOMES FOR THE PEOPLE IN SUBURB AND COUNTRY; Or, The Villa, the Mansion and Cottage. Adapted to American Climate and Wants. By Gervase Wheeler. 1 vol., 12mo., with 100 Engravings. Third Edition.

"Good taste, practical common sense, and an eye to the usages of the country appear throughout the work, while its designs and illustrations will prove an invaluable assistance to those who wish to build, and to build wisely and well."—*N. Y. Evangelist.*

"The author's study has been to furnish models for convenient, tasteful and even elegant suburban and country dwellings, from the lowest to a high cost, and to afford all the necessary information for their construction. We should like to see such books wide spread, as our national architecture needs improvement."—*Philadelphia Presbyterian.*

"There are abundance of books on architecture and on landscape gardening, but an actual absence of such another volume as the present. The designs are exceedingly tasteful, and imbued with the highest spirit of architectural beauty."—*N. Y. Express.*

Copies of either of these books sent by mail (post-paid), for $2, remitted to

The Most Successful and the Best.

NOW COMPLETE AND FOR SALE,
SARGENT'S STANDARD SERIES OF READERS for Public and Private Schools.

The Standard Fifth, or, First Class Reader.
The Standard Fourth Reader.
The Standard Third Reader.
The Standard Second Reader. Illustrated with cuts.
The Standard First Reader. Illustrated with cuts.
The Standard Primer. Illustrated with cuts.
Six Charts for Primary Schools.

By Epes Sargent, author of "Standard Speaker," &c.

The following are nearly ready:
Sargent's Smaller Primer. 16mo.; pp. 36. With cuts.
Sargent's Smaller Speller. 16mo.; pp. 60.
Sargent's Standard Elementary Grammar.

The first four Readers of Sargent's Series form a complete series of Reading-books for the Primary, Grammar, and District Schools of the country. The Fifth Reader is intended as a first-class book for higher Schools, Colleges and Academies. No series of Readers ever published in this country has had such universal recommendation from all who have examined them, or has met with such rapid and extraordinary success. Their adoption throughout the country by School Committees and Teachers, who have acquainted themselves with their merits, has been most general.

In the principal public schools of Massachusetts, New Hampshire, Maine and Rhode Island, these works have been introduced as fast as changes could be effected. In New York, Philadelphia, St. Louis, Cincinnati, Chicago, Detroit, Portsmouth, N. H., they are also widely adopted. In Boston, the School Committee voted, August, 1856, to introduce two of the books on the terms exacted by them of publishers in all cases of change; but their proposition was declined as involving favoritism not claimed by other towns, and unjust in its operation. The books were already too strong in the public favor to require any such indorsement at the expense of perfect equality.

Sargent's Series of Readers is unquestionably the best, as it has been the most rapidly successful of any in the market. Let facts speak for themselves. Though but a few months complete, upwards of two hundred thousand copies have been already sold!

Sargent's Standard Speller contains many new and admirable features, and is well worthy the attention of teachers. It will be found unlike any other spelling-book, both in its typography and general plan. Wherever used it has imparted new life and spirit to this department of instruction, and is having an immense sale.

Copies of Sargent's Series of School-Books will be furnished *gratis*, for examination, to Teachers and Committees, on application to the publishers. Or, the books will be sent by mail, postage pre-paid, where the amount is sent in stamps.

The California Farmer.

SAN FRANCISCO, FRIDAY, JUNE 26, 1857.

Letters and Exchanges.

Our correspondents are kindly requested to direct all letters to us at our principal office, San Francisco.

Those journals and periodicals with whom we exchange will much oblige us if they will be particular to note this, so that we may be in receipt of their favors at the earliest date. Those Publishers abroad, and at home, who kindly favor us with their publications for review, are requested to direct to our office, 130 Washington st., San Francisco

Our New Volume.

With our next issue we shall commence Volume Eight of the California Farmer, and it will be our endeavor to present such a journal as shall meet not only the approbation of all who have thus far given us their encouragement and support, but we hope win to us many thousands who have not yet become our patrons. The past seven volumes of the California Farmer must be the best guarantee of the future. We believe our friends and patrons will give us the credit of having steadily advanced both in typographical appearance and in all the other departments of our journal.

If we can have the kind co-operation of the practical farmer, the manufacturer and the mechanic, the *great trio* of human laborers, and the great promoters of the prosperity of every country, then we will make our next volume far better than any preceding one. This will be our aim at all events; but with such aid we can accomplish much more. We do therefore entreat all who feel a desire to build up California, to furnish us, from time to time, those practical results which almost every working man can furnish, whose heart or mind is engaged with the labor of his hands.

We shall make no extravagant promises, for those who know us best know we have devoted, and will still devote, all the powers of our body and mind to the cause in which, for the past five years particularly, we have been engaged—the developments of the agricultural, manufacturing and mechanical resources of California. And although these efforts apply more particularly to the first of these great interests, yet the success of the first secures the prosperity of the latter, and without the success of the agricultural interest, all others sink into insignificance in any country.

It will be our earnest effort and endeavor to present in number one, of volume eight, some new and beautiful illustrations in the several departments of the journal. These illustrations, with new type and cuts, have been received; and with these we shall introduce to our readers a new correspondent in each department, and valuable matter prepared especially for our new volume. Other improvements we have in contemplation, of which we shall speak as we present the number to our readers. To each and all of our readers we would speak personally, and ask their kind aid to carry on the work of progress—of human progress—and this can be best developed by calling out the resources of mind; these acting again upon matter, and thus developing the resources of our highly favored State; for we believe that in California we have the material, in all departments of art, science, and literature, to establish institutions and exhibit such proof of genius and skill as shall vie with any part of the world.

We would therefore ask of all our patrons to give us their aid in extending the circulation of our journal. We have been very much indebted to many of our subscribers in various parts of the State for their kind aid and generous sympathy. To very many we are under deep obligations for handsome lists of subscribers. Such friends are real ones, and they have our heart's gratitude; and now we ask, in view of the commencement of our new volume, each and all to look among their neighbors and friends, and try what they can do for the Farmer. We wish to issue a large edition, and hope to receive large accessions to our list now, so we can make many more valuable improvements. We have only begun the work. All that is done for us will but serve to stimulate us to do more; and each friend or subscriber who sends us a list will know the more we have the better our paper shall be.

Those who please to form clubs will see our terms on the first page, and can remit accordingly; and most happy shall we be to know this cause has a host of friends. Every Farmer that is circulated, either at home or abroad, we know will speak in favor of the best interests of California, and tend to bring to our shores the best kind of a population; and all who have dear friends in the East can send them no better gift than our journal every week, which we will mail to their order.

We hope to introduce to our readers with our new volume, our son and Associate Editor, from the East. Eight and a-half years' separation, and thus meeting here in this new country, will furnish many a theme of converse of the deepest moment both to him who came in early days, and to him who comes to see cities finished and peopled, as it were in a day. This new event, and one of so much moment, and the celebration of our national holiday, the Fourth of July, occurring on the week of our next issue, will induce us to publish the first number of the new volume about the 7th to the 10th inst., with full reports of these events, and thus give a little time to ourselves for enjoyment and recreation, which it has not yet been ours to claim, for years of hard labor. For a few days' delay we shall present sufficient matter to amply compensate our readers. Those who stand in the relation of father will appreciate our motive, especially those who have not seen an only son for eight and a half years.

With these remarks we tender to our patrons and friends our most grateful thanks for their generous support to all the past volumes of the Farmer, and ask anew their smile and favor to the new volumne; and those who may be indebted to us, we only ask of them to show to us that they appreciate our efforts, by remitting without further call—for to ask what is our due, so hardly toiled for, takes away the greatest portion of the pleasure in receiving. To those journals that have always cheered us on our way, we tender our grateful thanks, and a kind word from them will always be greeted with pleasure.

A Morning Ride or a Morning Walk

Those citizens of San Francisco who never visit the environs of this great metropolis, have no conception of the pleasure and comfort they lose, and the loss they experience in health by not visiting the beautiful gardens of Walker (the Golden Gate Nursery), O'Donnell (the United States Nursery), on the new Folsom road to the Mission, or those fine and flourishing gardens at the Mission, Sontag's, Center's, O. Haro's and Henderson's. In each and all of these places we find enough to occupy the mind and heart for hours; and we wonder that so many of our intelligent citizens—those who have resided in San Francisco for years—have never set foot in either of those "beauty-spots" of California. Having visited each of these places several times recently, we can speak strongly in their praise, and can with propriety and earnestness urge the attention of the community to the subject, as important help to pleasure, health and happiness. And certainly if there was ever a place where one can fly to escape from the weariness and languor which arises from a mind care-worn with business, *the garden is that place.*

Mr. Sontag, at the Mission, has long been celebrated for the cultivation of roses: in these he excels, as his extensive collection will testify. It will be recollected that Mr. Sontag lost many thousands of fine roses this spring, as was believed, by the fumes of the chemical works which were near by. A difference of opinion relative to the cause of the injury arose, and no redress was had by Mr. Sontag. For ourselves we have no doubt but that great injury was done by reason of those works; and so believing, Mr. Sontag has purchased another piece of ground, with buildings, far away from those works, but a good location, on the road to the Mission, where he will remove and be prepared to receive his friends and patrons this fall; and where he will not fear losing the labor of his hands. Mr. Sontag is a true florist, and is a lover of the rose; and when we visited him in the spring after the blight rested on his pet flowers, as he saw the labor of the whole season lost, the beautiful roses, nurtured with his own hands; as we saw his disappointment, and the tear-drop in his eye, we could sympathize with him, for we have often been where the shot strikes, and being well inured to disappointment, we can feel for others; and when Mr. Sontag remarked, "my roses! my roses! oh, my *beautiful* roses! I do'nt want to live when I can't grow roses!" we knew that the innate love of culture was there, and *that* we know. Mr. Sontag's garden is well worthy a visit. Many new roses, the perpetual moss and others are in bloom; and these beautiful gifts of nature and art we wish to be seen and known.

From Mr. Sontag's we visited Mr. Henderson's fruit garden. Here we found a large collection of fruit trees in fine growing order: peach, pear, apple, plum, cherry, quince, nectarine and apricot; and also small fruits, currant, gooseberry, raspberry and strawberry. Of all the orchard and garden we can speak well. Order, good cultivation, and care speak everywhere: the promise of a harvest is good. Of the strawberries we would particularly speak. It was from this garden we received, a little time since, those enormous berries, and we went to see the vines which produced them. They were the British Queen, and the largest we have seen this year. Mr. Henderson has prepared his ground in a peculiar manner. The foundation of his garden is a hard clay bottom; upon this he has placed about eighteen inches of good rich mould, and planted in this. For the purpose of moisture he has trenches entirely around the outside of each square; into these the water runs, and finds its way to the bottom or hard clay pan under the whole garden, and thence it rises up through the light soil, and waters the entire ground in the very best way, *at the root.* No water is poured upon the ground only in the trench outside. The entire grounds are watered from below, by reason of the clay bottom retaining the water, and the heat of the sun drawing it up to the surface. This plan is excellent and we like it much. We were feasted upon the raspberries and strawberries fresh from the vines, and for this and other attentions we are grateful.

We next visited the garden of Messrs. O'Haro & Co., formerly Conter's, at the junction of the two roads. The garden is in beautiful order, and the roses, carnations and other choice gems abundantly bloom, and by their fragrance these beautiful flowers say to the hundreds and thousands that are sleeping away the best hours of their lives, come and see us; come before the dews leave our fragrant petals; come and enjoy with us the early breath of morn—thus speak the flowers.

Messrs. O'Donell's garden, near the first toll-gate, also abounds with the choicest of flowers; and great credit is due to the brothers O'Donnell for converting a barren waste to a fruitful garden. One of the brothers (Wm. O'Donnell) has now a beautiful garden at San José. We advise our readers not to lose a chance of seing this garden.

Mr. O'Connor, also near the gate, has a neat and pretty garden, worthy a call—'tis new, yet prospering.

From there we came on to Walker's, of which we will speak in a separate article. From all those we visited we bore away, through their kindness, a gathering of fragrant flowers, and left pleasant recollections and thanks for each.

Walker's Garden, Mission Road, San Francisco.

The citizens of San Francisco, and of every county of the State, who visit San Francisco, the great commercial emporium, should not fail to go and visit the beautiful garden, known as the Golden Gate Nursery. The proprietor of this garden has spared no pains or expense to make these grounds the most beautiful, and the collection the largest and finest in the State. We have often visited it; often spent hours in reveling among the pet flowers of the goddess Flora; and unless you should visit this garden you have no conception of the wonderful beauty that is presented to the lover of the beautiful.

Mr. Walker deserves high praise for the liberality he has shown in striving to introduce into our State so many rare and beautiful, as well as costly plants. Mr. Walker has been liberal in the extreme, by importing at great cost, everything that is rare, and his collection now stands unrivaled in the State. The Roses and Carnations are now in bloom, and present a brilliant show, and we do not believe any florist in the State or Europe can show finer flowers; certainly some varieties cannot be equaled.

A splendid collection of Dahlias is now in bloom, and this is the time to make note of beautiful flowers by those who wish to purchase for gardens in the autumn. *Go, see them in bloom.*

Mr. Walker has been very successful in raising many varieties of new seedling plants; among them we note the following: two new seedling Fuchsias, of very rare excellence, both in habit of plant, and form and color of flowers; a new white Verbena; new, and very beautiful Calceolarias; Carnations; Picottees; Pansies; and several Geraniums; all these new flowers we shall watch with interest; and if their further development sustains their present merit, appropriate names will be affixed to them, worthy their high character.

We feel that such a grand collection of plants, and such truly beautiful grounds, should be widely known, and we hope the denizens of our cities will not fail to go to this garden often. They will be amply repaid. Mr. Nelson, the Superintendent of the garden, will always be happy to wait upon visitors, and his skill and ability as a Florist, and his courtesy and attention, will add much to the pleasure of a stroll in these grounds, by his lucid explanation of the character of plants and flowers.

Abundance of Fruit.

Notwithstanding the little rain that has fallen, and the continued dryness of the atmosphere, arising from an uncommon degree of hot weather at this season, we can prophesy an abundant crop of rich and luxuriant fruit of all kinds. If any one doubts this, let them visit the San Francisco markets. There is the great head-quarters where the best kinds of fruit will concentrate. Let them go now, and see the different varieties there; their size, their richness of flavor, and their abundance, and they will doubt no longer; and there is no market in the world where better paying prices can be realized. In this market, for the last four weeks or more, splendid strawberries of mammoth size have been sold daily, from 75 cents to $1 50 per pound, and often from 1000 to 3000 pounds per day. Many individual growers bring in, to market, from 60, 100, 150 to 300 pounds each. Besides this fruit, superb cherries have been quickly sold from $1 to $2 per pound; raspberries, by hundreds of boxes daily, at 50, 62, 75 cents, and even $1 per box; blackberries in great abundance at 37 and 50 cents per pound; apricots, high flavored, $1 25 per pound; apples and pears are now appearing and bring 50, 75 cents and $1 per pound, for California fruit, and less for imported Chili fruit.

At the present moment the crops of strawberries are abundant, and are selling at the very low rate of 25 cents per pound, good fruit; extra, 37½ and 50 cents. Melons are now appearing, and in about two or three weeks we shall have peaches, and in five or six weeks grapes; then quickly follow our heavy crops of apples, plums, pears, figs, &c.

The great demand for fruit arises from the fact that more fruit is eaten, and less solid material, during the hot season. This is as it should be, for it greatly preserves health.

We noticed some very fine ripe apples—the River Apple—and apricots, the Moorpark, that grew upon the ranch of Mr. Taylor, about twenty miles above Sacramento. When in Sacramento, last week, we received a nice lot from Mr. J. R. Ray, grown at the famed ranch of the "Wolfskills," on the Puto. They were native apricots, but fine, and Mr. Wolfskill raises them in great quantities. Mr. Ray of Sacramento sells great quantities of fruit, and we take great pleasure in saying to fruit growers in this upper section, that they will do well to call on Mr. Ray and arrange to have their fruit sold in Sacramento while they are fresh, for we notice that some send to San Francisco first, and the same fruit finds its way back again; but it has lost a great portion of its freshness and beauty. Now, Sacramentans want all the good fruit they can get.

The markets of San Francisco should be visited at early morn, by all who love fruit.

Col. S. W. Inge, in a letter declining to attend the Settlers' Meeting in Mariposa, states that the Fremont grant will be held fraudulent and void.

Supreme Court Decisions.

On Tuesday the Supreme Court, at Sacramento, rendered a number of important decisions, of which we take the following synopsis from the Union:

The case of the Merced Mining Company vs. John C. Fremont and others, decided by a majority of the Court, settles definitely the right of the Merced Company to prosecute their mining operations on the Fremont grant, by perpetuating the injunction against the defendants. The importance of this case is evidenced in the fact that improvements amounting to upwards of eight hundred thousand dollars have been made upon the property. The decision is rendered by Mr. Justice Burnett, Mr. Justice Terry concurring. Chief Justice Murray dissents in a separate opinion. The majority of the Court expressing no opinion upon the point whether the minerals in the soil of California belong to the State or to the United States, hold that the license granted to work those lands, whether it be tacit or express, confers certain rights upon the occupants, which will enable them to sue. Although the right to enjoin trespassers was once quetioned, it is now conceded, and as the value of those lands consists in the gold contained in them, to remove that gold is an irreparable injury to the occupant. Hence an injunction to restrain the removal of gold was perfectly proper. Upon this the Chief Justice bases his disagreement. He does not consider the injury of such an irreparable character as to bring it within the scope of the rule laid down in the authorities as well as by the Supreme Court in a previous case.

The case of Henry M. Naglee vs. Palmer, Cook & Co. is one of considerable importance. In it, the plaintiff, as receiver of Adams & Co., sought to foreclose a mortgage for one hundred thousand dollars given by the defendants, Palmer, Cook & Co., to secure a certificate of deposit for that amount. The foreclosure was resisted, on the ground that the money belonged to the assets of Adams & Co., and should properly be set off against the amount due defendants by that firm. The dividends due Palmer, Cook & Co. were nearly, if not quite, equal to the sum, and, in the opinion of the Court in a proceeding in equity, were the proper subject of set-off. Judgment is reversed and the cause remanded.

In the case of Dominguez vs. Dominguez, an attempt was made to set aside a sale of land made in 1835. The decision of the lower court is affirmed, on the ground, among others, that the appellant had slept too long upon any right he may have had, and was besides barred under the Mexican laws of prescription.

In the case of Stone vs. Harris, the plaintiff admits in his complaint that he had been guilty of a fraud, and very coolly asks the Court to sustain him in it. The Court not being so complacent as the plaintiff, declines to do so, and reverses his judgment.

In the case of Landecker vs. Houghtaling, judgment is affirmed with costs. Fraudulent design on the part of a vendor, would not, of itself, be sufficient to vitiate a sale to an innocent purchaser, without notice and for a valuable consideration, but the fradulent intent being established, it is for the jury to determine whether from the circumstances the purchaser participated in the fraud.

In the case of Soule & Page vs. Dawes et al., the Court hold that where persons who contract to build a house agree to take land in payment, and after the lot upon which the house has been built has been mortgaged, vary the terms of the contract, the contractor cannot assert his lien under the statute, to the detriment of the mortgagee. The judgment of the lower Court is reversed.

The case of the people vs. Woods came up on review of the former opinion of the Court, which the Court is now satisfied was wrong. This is an important case, seriously affecting the Funded Debt of San Faancisco. The Court before held that the Funding law was simply a legislative provision providing a fund to secure an antecedent debt, and not a law creating a contract. In this it erred; and it is now held that the law could be altered or amended so as to impair or destroy the rights of the parties under the Funding law. The provisions of the Consolidation Act, which changes the manner in which the funds on hand shall be disposed of, must, therefore, fail, as this change would work an interference with the contract between the bond holders and the city. The judgment of the lower Court is now affirmed.

To our Readers and Correspondents.—We had mislaid a valuable memoranda of our trip to Suisun Valley and Sonoma; also a trip through the pass from San Leandro via San Lorenzo, from Hayward's to Stockton. They will appear, with due credit to those friends to whom we were much indebted for courtesies.

We have received articles from our valued correspondents, Laura, C. A. S., Florence Percey, Elliot, and the The Author of—&c., which shall appear promptly.

We call the attention of our readers to the valuable letter from the New Bedford Price Current, as one of moment to all who feel for the welfare of California.

Read the communication of Luna, and the article on Health, together with many letters from our correspondents, all are worthy a perusal.

We would call attention to the interesting letter of Omega, on the Schools of Sacramento.

Our thanks are due to G. W. Grannis, Esq., for rare seeds from Mexico, of which we shall speak hereafter.

The New Map of California.—We have noticed, once before, the new map of California, just issued by Messrs. Britton & Rey, Montgomery street, San Francisco. Then we had only time to refer to its general features and characteristics; but, upon a re-examination, we find a clear and perfect delineation of all the minute features of our State, which are so apt to be overlooked by those who design and issue a map of this character.

Messrs. Britton & Rey have succeeded in offering a map truly worthy of universal acceptance, and every family should have one. Parents, in particular, should have this map, that they can point out to their children all those important features and places in our State, so necessary for the youth of the present day to know. As the cost of this map is placed at the low price of $5, no one should be without it.

With many thanks to Messrs. Britton & Rey, for those sent to our office we trust they will be amply remunerated for the good work they have done the State.

The Big Tree Route.

The San Joaquin Republican says that a merchant train of twenty-seven wagons has crossed the Sierra Nevada from Carson Valley, by way of the Big Tree road, for the purpose of freighting and returning by the same route. Our Mokelumne Hill correspondent says that this train will arrive at Stockton during the week. We presume, however, that a portion of it will take up the freight of the ten mule team that left here a few days since. However that may be, the fact that this extensive train has crossed the mountains without difficulty, and will return with full freights, taken in connection with the uniform success attending previous experiments over the road, settles definitely and finally, the question of superiority of the several passes across the Sierra Nevada. It is a demonstrated fact that the Big Tree road is the only one thus far discovered, practicable for loaded vehicles. A glance at the geographical measurements of the county, shows that this is the most direct route. That it will be adopted as the pass through which the great overland mail shall enter California, there can be no reasonable doubt. If so, it follows, as a necessary consequence, that Stockton will be made the central point from which the mails will radiate to all parts of the State. The great body of the immigration will naturally follow the course of the mail, as the most direct, most eligible and safest route, which will make this the great entrepot of population, as well as of transmountain commerce and mails.

This valley being endowed by nature with a fertility and with resources superior to any other portion of the State, it is but rational to suppose that it will retain as permanent settlers the larger portion of those who make it their first stopping place in the country.

Hutchings' California Magazine.—Number one of the second volume of this welcome periodical comes to us, rich with valuable articles and beautiful illustrations. The large and fine view of the hydraulic method of mining, taken from an excellent ambrotype, will commend itself at once to the miner, and to all interested in the miner. The different methods of mining are well described in an interesting article, which is illustrated with a number of spirited engravings. The publishers have been untiring in their efforts to make this magazine acceptable to the reading public of California, and we are happy to see that they have been met with a flattering appreciation. We have not space to notice all the beauties of the July number, but we cheerfully recommend it as being fully equal if not superior to any of its interesting predecessors.

Fruit in Sacramento.—We noticed a very fine lot of fruit on J street, as we were passing, and, stopping to look, some fine figs, apricots and apples were politely placed in our hands, to prove. We can affirm, they were excellent. They were grown—the figs, by Wm. Wolfskill, Puto Creek; the apples and apricots, by Mr. Taylor, of whom we have spoken. Mr. H. Apple is the proprietor of the store, and a good and generous flavored apple he is, as we have experienced. We advise those who sell or buy to go and make his acquaintance.

We met also, at the fruit stand of Mr. Glass, a collection of fine fruits, and there we learned they came from San Francisco, and were on sale by Mrs. Weaver, who is so celebrated for fine fruit, in the Washington Market, San Francisco.

The Bulletin.—The disposition of the Bulletin toward the Farmer is manifest; and as we have said, we have no wish to measure lances with or checkmate a King, yet our sympathies are alive when the *plow* is called in question, and we shall endeavor to use it so well in our next issue that our neighbor of the Bulletin will think a "back furrow" will be best, and probably he will leave the land "fallow" awhile. We shall not *dodge* the matter, but convince him we know how to use the plow. And, as to the matter of the *inions*, we shall give a mathematical demonstration of the requisite number at the same time. A particular work on poetry, that we seek, shall then show that *two* minds may think alike that *never* met.

Guano.—This important fertilizer is now offered for sale in our markets, both foreign and domestic; the former from the islands of the sea, and the latter from the island of our own harbor. As many and valuable results are attained by the use of this wonderful manure, we need only say to our readers that samples of this guano can be seen at the office of William Schleiden, ship and custom-house broker, on Oregon street, opposite the Custom House.

To the Merchants of San Francisco.—We call the especial attention of the merchants of the Bay City to the important letter we publish to-day, in relation to the fitting out of whale ships in San Francisco. We have no doubt but that measures can be adopted that would secure this very important business to our city; and while it would save large amounts to the owners, it would give millions of dollars of trade to our merchants.

From a survey of the Tunnel of the South Yuba Ditch Company, made on the 17th, it was ascertained that there was 102 feet of the tunnel to be excavated. About eighty feet of the tunnel has been run in the past two months, but the digging is now much better and it is thought the work will be completed by the 20th of July. They have now 100 men at work on the ditch.

Mr. J. S. Marlett, who is now sinking a shaft just above Dog Point, Calaveras county, has struck a very thick bed of lava, with large particles of charcoal fused all through the mass. It was struck in a shaft at the depth of eighty-two feet. The lava is a common, white, friable substance, strongly contrasting with the black, fresh-looking charcoal interwoven throughout the substance. The bed is over eighteen feet thick, already prospected, and the shaft is not yet through the lava.

Over the Plains.

Capt. W. M. Harron, D. O. Mills, A. V. Sill, R. T. Sill, H. M. Sill, Chas. Forman, A. Eckman, H. Odell, Dr. Hoy, James Swartz, —— Sand and R. G. Davis, of Sacramento, left Thursday morning for the East, over the plains, *via* Salt Lake. They go in the saddle, and take wagons with their materials for comfort and luxury. They passed up J street, accompanied by a troop of friends, who were as an escort to them, for several miles.

Although ostensibly a visit to the States, we rather surmise they may find some good, eligible locations along the *new Wagon Road*, where, by and by, new cities will spring up. Such a body of intelligent and wealthy men do not often take such a tramp for mere pleasure. We wish them success, however.

An Intellectual Bouquet.

The Last Readings of Mrs. Lesdernier.

Mrs. E. P. Lesdernier, who leaves our shores very shortly, will favor her friends with her last readings, previous to her departure, at Musical Hall, on Sunday evening. The subject of this entertainment will be

A PROSE ESSAY.

This Essay, written by Mrs. S. M. Clarke, is entitled, "The Representatives of the Highest Enlightenment of the Ages." It is

A PROPHESY.

To those who have enjoyed the readings of Mrs. Lesdernier, it is only necessary to say this will be their last opportunity, and the whole entertainment will be *original*. It is to be hoped that an entertainment of this kind will not fail of drawing out one of the best audiences of the season. The theme is worthy of it; the name and fame of the author of the Essay is worthy of it, and the estimable and accomplished artiste who reads for the last time before she leaves our shores, should receive a testimonial worthy her talent and worthy the liberality of a San Francisco audience.

Post Office Affairs.

Reduction of Box-Rents—Other Improvements.

TO THE SAN FRANCISCO PUBLIC: I deem it proper to announce in advance my determination to extend and improve, at an early day, the facilities and accommodations of this Post Office, which certain embarrassments and obstructions thrown in my way by interested parties have heretofore defeated.

On and after 1st July next I shall make a second reduction in box rents of *fifty per cent.* upon the present rates, which will bring them down lower than the rates charged at the principal offices in the Atlantic States, and I trust will meet the entire demands of a reasonable public. The rates will be: For Lock Box, one dollar per individual, per quarter (three months); for Glass Box, seventy cents per quarter—two or more persons required for a box.

A limited number of boxes of both kinds are now vacant, and can be had immediately by application at the front window of the office.

As soon as the necessary arrangements can be completed, I shall have the up-country mails opened immediately upon arrival of the steamboats each night, and assorted into the boxes. The office will also be kept open one hour after the arrival of the boats for the delivery of letters to all who may call at that time—say from 10 until 11 at night. It is also my intention to have letter boxes or bags placed upon the river steamers to enable persons to mail letters there at the latest moment. Letters so deposited either at Sacramento or Stockton will be taken out immediately upon arrival, and as promptly and securely delivered as those in the regular mail.

In due time I shall endeavor to have receiving boxes put up in conspicuous and convenient localities in the business portions of the city, from which letters deposited therein shall be taken and mailed at a late moment each day before the departure of the mails.

I shall also make early provision for delivering letters at the residences or business places of persons desiring it, and who may leave directions accordingly at my office. Merchants and others may thus have their correspondence delivered at an early hour in the morning or a late hour at night. The additional charge for this service, to compensate the carriers, will be five cents per letter.

With these improvements and extended facilities I know this office will be able to do as efficient service as express companies can, and therefore it is expected an appreciating public will throw their correspondence into the legitimate channel provided by the general government, and by thus sustaining and supporting this branch of public service, add to its general efficiency and their own accommodation.

C. L. WELLER, Postmaster.

June 23d, 1857.

A quantity of marine shells, the *concha-fortis*, have been taken from Nicholas Suffalo's claim, out of a shaft one hundred and twenty feet deep, Buckeye Ridge, Calaveras county. The shells are not fossils, but fresh, with green tinted water marks in fringy interstices.

HOLLOWAY'S OINTMENT AND PILLS.—An astonishing cure of an abscess, pronounced incurable by the faculty. Robert Parlett, of Cumberland, Maine, was afflicted for three years with an abscess in the arm, and was about to have the limb amputated, but for the use of Holloway's Ointment and Pills, which completely cured it. Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot or box.

A FAVORITE REMEDY.—We believe no medicine has ever given stronger proofs of its efficacy than the Oxygenated Bitters. In cases of Dyspepsia and General Debility, restoring health and cheerfulness, when all other remedies have failed.

MELODIA.

A lady, well qualified to give Music Lessons upon the Piano or the Guitar, is desirous of obtaining a select number of young ladies for a class. Lessons can be given at private residences, or a class may be formed where it shall be mutually pleasant and agreeable. The advertiser feels confident that not only her ability to teach, but her manner of teaching, will secure the confidence and approbation of those who may be placed under her charge.

With a thorough knowledge of music, combined with a love of it, together with an earnest desire to impart to others the pleasure that music can confer, betokens a good teacher, then the advertiser is qualified as a teacher; and would be happy to prove it.

Letters addressed to "MELODIA," care of the Editor of the FARMER, will receive prompt attention. v7-9 tf

SPECIAL NOTICES.

☞ **A SYLLOGISM!**

PROPOSITION 1st.

Every Lady and Gentleman desires a beautiful head of Hair.

PROPOSITION 2d.

The use of **LYON'S KATHAIRON** will, without fail, produce such an one.

THEREFORE:

Every Lady and Gentleman will, of course, immediately commence using LYON'S KATHAIRON. All pronounce the KATHAIRON to be the finest and most agreeable preparation for the Hair ever made.

Its immense sale—nearly 1,000,000 bottles per year—attests its universal popularity. Sold everywhere for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.

PARK & WHITE, Wholesale Dealers, San Francisco. 24-1m

☞ **A Perfect Cure by Wild Cherry.—**

[From the Editor of the New York Mirror, August 9.]

About four weeks since, one of the compositors of this office was suffering so badly from a cough that he was unable to sleep nights, and too weak to stand at his case. He became very pale and thin, and gave symptoms of falling a victim to quick consumption. We recommended to him various medicines, which had no effect. Finally, we gave him one bottle of *Wister's Balsam of Wild Cherry*. It afforded him immediate relief, and he is now a well man, and not the slightest symptom of a cough. These are facts, and further particulars may be learned at this office. We should add that the cough in the above case was accompanied by profuse spitting of blood.

None genuine unless signed I. BUTTS on the wrapper.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 24-1m

---

☞ **Scrofula and Diseased Blood.—**"DR. GUYSOTT'S improved Extract of Yellow Dock and Sarsaparilla" is a true specific. The proprietors have in their possession over one hundred certificates of the most extraordinary cures effected by it. We can safely say, "Try it." It revives the drooping constitution, eradicates all humors from the Blood, and by its tonic properties restores the invalid to life and vigor. As a spring and summer medicine, it has no equal. Its singularly efficacious action on the blood, its strengthening and vivifying action on the system stands preëminently above all other Sarsaparillas. If you would have the rose brought back to your cheek, a clear, healthy and transparent skin, and life and vigor imbued through the system, take Guysott's Extract of Yellow Dock and Sarsaparilla. It contains more of the pure Honduras Sarsaparilla than any other preparation extant, which is chemically combined with the Extract of Yellow Dock and the Extract of Wild Cherry, thus making the remedy more thoroughly efficient than any other Sarsaparilla before the public. At the same time it is perfectly free from all mineral poisons, which cannot be said of other Sarsaparilla compounds.

☞ Be careful and buy none but QUART BOTTLES. Sold by Druggists generally.

PARK & WHITE, General Agents, and importers for all valuable Patents Medicines, 132 Washington street, San Francisco. v7-22

☞ **RATS—ROACHES—BED BUGS, &c.—**

The *London Quarterly Review*,

The *New York Daily State Register*, and others on

"COSTAR'S" Rat, Roach, &c., EXTERMINATOR,

"COSTAR'S" Bed Bug EXTERMINATOR,

"COSTAR'S" ELECTRIC POWDER, for Ants, &c.

The London Quarterly Review contains near a column, and the New York Daily State Register, of April 27th, says: "The French Government does not permit rats to be killed in any other manner except by 'Costar's Rat Exterminator,' which is sold (in this city) at No. 388 Broadway;" and again, in issue of May 1st: "No judicious housekeeper should defer purchasing a supply of this invaluable remedy for clearing their houses of all kinds of vermin. With all confidence we can recommend it as an indispensable article for every family."

The New York Journal, for April, has the following: "'Costar's' Remedies for all domestic pests, such as Rats, Cock-Roaches, Bed Bugs, Ants, Fleas, &c., are said to be invaluable; indeed, we can speak from actual knowledge of their rare merits. The name of 'Costar' is a 'household word' to New Yorkers, and his Depot, No. 388 Broadway, is thronged by thousands daily. As the summer approaches we advise every one who would be rid of the above named pests, to send and procure a timely supply of the *Exterminator*. Druggists and Dealers also should send their orders early if they would secure a trade in articles for which there is a *constant demand*, and on which a fair profit may be realized."

☞ See advertisement in another column. v7-20 3m

☞ **THE EDITOR'S CARD.**—We would ask an especial favor of our friends in every county—we want their aid in a plan which we trust will do our State some service, and make her character and resources better known. Will our Grain growers and Haymakers aid us? Will our Farmers aid us? Will our Miners, Mechanics, Manufacturers, and all other friends of the industry of our State aid us? The following is our plan and these are our wants:

We want a collection of Grain from every county in the State, both in the sheaf and in the grain; we desire the best specimens of every county, and of every farm, if we can have them—a sheaf of a hundred and fifty heads, and full length of the straw; also about one quart of the same grain, cleaned. We want Barley, Wheat and Oats, and all new species of Grains and Grasses. We would like rare specimens of Vegetables in their seasons, and Fruits; specimens of Minerals, petrified Acorns, or Seed of Trees, or whatever is curious. The object of such articles, especially the grain and products of the soil, as well as all others, is to have them shown at the different Exhibitions of the States, and in Europe, that the character, productions and resources of California may be truly known, and thus induce an emigration of the right character.

As this object is one of a public nature, and intended to accomplish a great public benefit, we shall hope our friends will aid us in this enterprise. We shall keep a record of every contribution, and their kindness will be remembered, and their donations made known abroad as well as at home. All who are pleased to respond to our call, will please pack Grains and Grasses carefully in boxes, so as to preserve the grains perfect, and let them be so far ripe as not to mold—but not too ripe; other supplies can come in bags or boxes. Forward by Express, and we will cheerfully pay all charges on boxes, etc., and quickly acknowledge receipt of same through our journal, and with our grateful thanks to those who aid us in this enterprise. Direct to our Office, at San Francisco. v7-23 tf

Estudillo House,

SAN LEANDRO, Alameda County.

THE subscriber respectfully informs his friends and the public that he will continue the Hotel business in this popular and well known establishment, and hopes to merit a continuance of the patronage hitherto so liberally bestowed upon the House.

Having made great improvements on the premises, the public may rely upon receiving such attention and accommodations as can only be obtained in a first-class Hotel.

San Leandro, the County Seat of Alameda County, is situated on the main road to San José, in the center of the finest farming district of country in this State, distant six miles from Brooklyn, and eight miles from Oakland, to which places the Contra Costa boat makes three trips a day from San Francisco. Stages leave both places immediately on the arrival of the boat and return in season to meet her on her return trips.

The easy access from the city to this delightful village, renders it a very desirable place of resort for gentlemen with their families, and particular attention will be paid to those who may honor us with a visit.

The Hotel will be under the management of Mr. T. HEGEMAN, familiarly known as the "Judge," whose qualifications have but to be tested to be approved.

v7-24 THOMAS W. MULFORD, Proprietor.

Pacific Mail Steamship Company's Line TO PANAMA,

CONNECTING

VIA PANAMA RAILROAD

WITH THE STEAMERS OF THE UNITED STATES MAIL STEAMSHIP COMPANY, AT ASPINWALL,

For New York and New Orleans Direct.

Departure from Vallejo street Wharf.

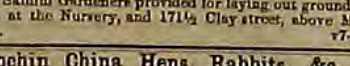
THE MAGNIFICENT STEAMSHIP
GOLDEN GATE,
R. L. WHITING, Commander.

Will leave Vallejo street Wharf, with the United States Mails, Passengers and Treasure, for PANAMA,

On SATURDAY, - - - - - - - - JULY 4th,
At 9 A. M. punctually.

Passengers by this Line are landed on their arrival at Panama upon the Wharf of the Railroad Terminus, by the Company's Steam Ferry Boat, and proceed immediately by

Railroad Across the Isthmus to Aspinwall,



Where the steamers of the U. S. M. Steamship Company are always in readiness to convey them to New York or New Orleans. Passengers for New Orleans proceed by steamer from Aspinwall.

THROUGH TICKETS

Are furnished, including the transit of the Isthmus.

Passengers are notified that the tickets for the steamers of the U. S. Mail Steamship Company must be presented to their Agent at Aspinwall for registry and exchange, as they will not otherwise be available.

Treasure for shipment will be received on board the steamer until 12 o'clock midnight, Friday, July 3d.

No Merchandise freight will be received on board after 3 P.M., July 3d, and a written order must be procured at the Company's Office for its shipment.

For freight or passage, apply to
FORBES & BABCOCK, Agents,
Corner of Sacramento and Leidesdorff streets.

☞ A Choice of Berths on the Atlantic Steamers is secured by the early purchase of Tickets in San Francisco. v7-1

Ornamental Shrubbery.

Cochin China Hens, Rabbits, &c.

THE subscriber would desire to call the attention of the public to his stock of very fine Cochin China Fowls, which he believes cannot be surpassed in the country, and it is very doubtful if they can be equaled. He devotes his whole time to the raising of this one variety of fowls, and believes he has accomplished a desired object by securing perpetual layers. Certain it is he has the largest and finest fowls in the country.

The varieties of Rabbits are unsurpassed, and for size and beauty, cannot be matched in this State.

The undersigned can now offer 300 Fowls for sale, and 1500 Rabbits, all of the best stock.

Purchasers are invited to call at his Ranch on the San Pablo Road, about two miles from Oakland.

MISCELLANEOUS.

FOR PURIFYING THE BLOOD,

AND FOR THE CURE OF

Scrofula, Rheumatism, Stubborn Ulcers, Dyspepsia, Salt Rheum, Fever Sores, Erysipelas, Pimples, Biles, Mercurial Diseases, Cutaneous Eruptions, Liver Complaint, Bronchitis, Female Complaints, Loss of Appetite, General Debility, &c.

A plentiful supply of pure blood is as essential to animal life as light, heat, and genial showers are to the vegetable kingdom. When the proper circulation of the vital current is impeded, sickness is the inevitable consequence, the secretions become unhealthy, the liver becomes clogged with impure bile, which, spreed into the system, vitiates and inflames the blood, engendering scrofula and cutaneous and biliary disorders. The experience of sixteen years has fully established the high reputation of this invaluable medicine: its curative powers have been thoroughly tested in long standing and obstinate cases, with such invarisble success as to call forth the most flattering commendations from eminent physicians throughout the country.

MEDICAL TESTIMONY.

The following recommendation is from one of the oldest physicians in New London, Conn.

Messrs. A. B. & D. SANDS: Gentlemen,—Your Sarsaparilla has been very extensively used in this city and the neighboring towns, and so far as my knowledge extends, uniformly with success. In a great variety of diseases of long standing, and of a very distressing and dangerous character, which have resisted a long list of remedial agents, it has been used—in many of them with complete success, and in all with decided benefit. It is regarded by the medical profession as a medicine of great efficacy in a numerous class of diseases, such as inveterate constitutional complaints, when the system has been long diseased; in cases of long use or abuse of mercury; in rheumatism of long standing; in obstinate diseases of the skin; in enfeebled conditions of the system; in chronic abscesses, attended with profuse discharges diseases of the bones; obstinate ulcers; chronic pulmonary affections; enlarged glands, and various other maladies connected with a depraved state of the system. Its use is usually followed with improvement of appetite and digestion, increase of strength and flesh, better rest at night, the production of a more healthy state of mind, and complete restoration to health.

Truly yours,
WM. STERNE, M. D.

Prepared and sold by A. B. & D. SANDS, Wholesale Druggists, 100 Fulton-street, corner of William, New York. Sold also by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally.

IT NEVER FAILS!

CROSSMAN'S SPECIFIC MIXTURE

FOR THE CURE OF

CERTAIN DISEASES, WITH WHICH UNFORTUNATELY MANY ARE AFFLICTED.

Of all the remedies yet discovered for such complaints, this is the most certain, and leaves no injurious effects.

It makes a speedy and permanent cure, without the least restriction to diet, drink, exposure, or change in application to business. One bottle is generally sufficient to cure an ordinary case, which not unfrequently disappears after six or eight doses.

Sold by H. JOHNSON & Co., San Francisco; S. T. WATTS & Co., Marysville; R. H. McDONALD & Co., Sacramento; and by Druggists generally. v7-24 3m

MR. BAILEY SARGENT, the Proprietor of the American (late Wilson's) Exchange, begs leave to inform the traveling community that he has undertaken the personal charge of that House. He has made extensive alterations and improvements, and has renovated the House throughout, making it the first Hotel on the Pacific coast. There has been added to the house a fine Sitting Room and Dining Hall, newly furnished. In point of comfort and all the conveniences which modern Hotel keeping have rendered essential, the

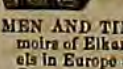
AMERICAN EXCHANGE

Can compare favorably with any of the Atlantic Hotels. The best talent has been employed in the various departments, and the proprietor will set the best table the market affords. Prices to suit the times.

The American Exchange COACH is always in readiness to convey Passengers to and from the House to the landings or to any part of the city, for $1—Baggage free. P. B. SMITH has charge of the Coach.

All orders left for him at the Office will be promptly attended to. v7-23 3m*

Works of an Abiding National Interest,



PUBLISHED BY
DANIEL DANA, JR.,
381 Broadway, New York.

MEN AND TIMES OF THE REVOLUTION; or, Memoirs of Elkanah Watson: including Journals of Travels in Europe and America, from 1777 to 1842, with his Correspondence with Public Men, and Reminiscences and Incidents of the Revolution. Edited by his son, Winslow C. Watson.

SECOND EDITION: With a copious Index, a Portrait of the Author, engraved on Steel, after the famous portrait by Copley; and twenty fine Wood Engravings. 12mo., 576 pages, on tinted paper, $1 50.

[From the Knickerbocker, Monthly Magazine.]

"This work rolls back the tide of years, and almost places the reader in the very shoes of the writer. It is a volume of wonderful interest, not only from the deeds and events recorded, but from the admirably graphic and simple manner in which they are presented."

[From the Newark Daily Advertiser.]

"Were this fiction it would be considered most entertaining reading; as fact, its interest surely cannot be less."

THE OLD FARM AND THE NEW FARM: A Political Allegory. First published under the title of "A Pretty Story." By Francis Hopkinson, a member of the Continental Congress. With an Introduction, Historical Notes and Illustrations, by Benson J. Lossing, M. A., author of "The Pictorial Field-Book of the Revolution," &c.

"This allegory is one of the happiest efforts of the greatest wit of the Revolution. It explains, by means of striking pictures of real life, the causes of the war, and thus powerfully appeals to the common sense of all men."—[Publisher's Critic.

"It is an admirable political tract of the true stamp."—[New Orleans Picayune. v7-23 3m*

Fine Blooded Stock.

THE Subscriber has been engaged for about twenty five years in rearing fine blooded stock of all sorts, on the same farm, and for life; and few, if any, breeders have been more careful or more successful. My stock registers (long and carefully kept) numerous silver premiums, and constant private sales at fair prices attest my success.

The imported Bull "Senator II," and about twenty-five head of thorough-bred Durham Cows, chiefly by imported bulls: about twenty Boars and Sows of the best tried and most approved breeds; and also about one hundred head of select Ewes of my new and popular breed of Sheep, known as "Improved Kentucky Sheep;" and also a few pure imported Cotswolds, constitute chiefly my present breeding herd.

Stock of various kinds carefully prepared in all respects for shipment, have been sent to order by me to almost all parts of the United States, and, I am happy to say, with uniform satisfaction to purchasers.

Moderate prices are asked, and remittances may be made by drafts on well known banks and bankers anywhere.

Orders from California will receive prompt and special attention. ROBERT W. SCOTT,
v7-23 2t* near Frankfort, Kentucky.

RETROSPECTION.

[We offer a welcome greeting to the fair Hortense, and although her thoughts come clad in a strain of grief, there is so much beauty in them that they chase away the sadness by which they are surrounded and make one feel there is a brightness beyond, bright as the "Sunny South" from whence they came. "Hortense will ever be welcome to our columns.]

Back, back ye surging thoughts, I cannot bear
To muse on those sad days when not a care,
Or sorrow flung its shadow o'er my brow,
And feel those halcyon days are vanished now:
I would forget, would bathe in Lethe's stream,
For rushing o'er my soul like some faint dream
Comes o'er the memory of those times of bliss;
Oh! Fate! what contrast cruel dark is this?

Alas! 'tis thus—e'en when I would forget
The past will linger and will torture yet,
And memories dim which I would fain dispel,
Still fling their shadows o'er my bosom's swell;
And one by one the leaflets of my heart
Are torn by memory's torturing hand apart,
And cherished dreams lie buried in the past—
Dreams too bright, e'en if realized, to last.

The harp-strings of my heart are rusting now,
Yet ever and anon a murmur low
Sweeps lightly o'er and thrills them with a line
Not of the blissful past—but future's own:
Perhaps to some the tone would sadness breathe—
But *Death* from me a welcome will receive;
It brings oblivion—rest—for that I sigh;
For now, my dearest wish is but to die.

May 3d, 1857. HORTENSE.

THE SOUL OF THE BEAUTIFUL.

[The following exquisite morceau, by "Hattie Heath," in the Louisville Journal, will be enjoyed by all whose hearts have a resting place or a home for the reception of the beautiful:]

The soul of the beautiful! Where doth it dwell?
And what is it like that its presence we tell?
Say, hath it a form, like an angel all bright,
That flatters forever on pinions of light?
Or is it some gentle and fairy-like thing,
That is gliding about on a butterfly's wing,
Now hovering lightly o'er blossoming flowers,
Now resting so gently in fair maidens' bowers?

Doth it dwell in the voice of the bright-winged bird,
When the heart by its exquisite music is stirred?
Or hath it a home where the mermaidens throng,
Awaking the echoes with wild luring song?
I have thought that it slept on the bosom of night,
With the stars to keep watch till the coming of light;
But it rose on the light cloud that floated at morn,
When lightly on wings of the sunlight 'twas borne.

I thought that I saw it on bright dancing waves,
But they told me it dwelt in the earth's deepest caves;
I gazed on the face of a fairy-like child,
And felt it must be in her heart when she smiled;
Again, it looked forth from the violet blue,
When its bosom was sparkling with pearls of rich dew,
And I plucked the sweet thing—ah, it breathed but a sigh,
For the soul of the beautiful left it to die.

I fancied I saw in the tall waving grass,
Its footsteps, as there its bright form seemed to pass,
And I reached out to grasp it—the phantom had gone,
Flinging back on the breezes a light, mocking tone.
Then I looked on a maiden, all guileless and fair,
On her sweet lips were trembling the words of a prayer;
And the beautiful seemed of her young soul a part;
Say, doth it not dwell with the holy in heart?

A Leaf from My Diary.

[The annexed communication of our new and valued correspondent "Luna" will find many admirers. The tribute paid to one whose pen has been too long silent, is an evidence of an appreciating spirit, and we trust will awaken other spirits of like character to continue the great work of reform which "Luna" and many others feel to be so necessary to human happiness.]

San Francisco, Sunday, June 14.

I have concluded not to go to church to-day, for somehow I seem to feel nearer to God, and more truly devotional, seated here in my little room alone, than there, where there is much that leads the mind away from God.

Pope says, "the groves were God's first temples," and they ever will be the holiest place of worship to a purely devotional spirit; where alone, kneeling at the foot of some aged tree, with its broad umbrageous canopy of green leaves extended above you, comes the thought that thus it waved long ere you had an existence, and makes you feel how short is time, how perishable is mortal flesh! and as the pure breezes of heaven gently sway the leafy branches to an fro with a soft murmuring sound, like a mother's sweet lullaby, and fan your fevered brow, the deep-seated fountain of devotion is opened in the heart, and the soul feels truly in the presence of its God. There, as you lift your eyes to heaven and pray, while your voice of supplication is accompanied by the melodious singing of birds, and your tears mingle with the dew upon the flowers at your feet; though all unseen by mortal eye, and unheard by mortal ear, it will be a treasure laid up in heaven, which, through the merits of the Redeemer will purchase an eternal inheritance at God's right hand.

In vain do I strive to feel the same in the gorgeous temples built by the hands of men for the worship of God, especially as now conducted. The low soft tones of the organ fall sweetly upon my ear, but fail to reach the deep fountain of my heart; and so too with the singing by the choir, who are *hired* to sing the praises of God. My spirit cannot soar devotionally upon music, though of the sweetness of David's harp, unless it flows spontaneously from the heart, and that heart so filled with love to God as to rejoice to sing His praise.

A friend called on me to-day, and after staying a while here, I went with him, and was introduced to Mrs. C——, formerly editress of a journal in this city, but who has been disabled from using her gifted pen for nearly two years; but I hope God may spare us her truly angel presence, to light us on through life's intricate pathways, and her soothing voice to cheer the dying hour and dispel death's gathering gloom, and to weave bright garlands for the dead, that shall leave a halo round the tomb. As she spoke of that artificial life, falsely, wrongfully called society, and quoted the so much unheeded admonition of Christ, "except ye become as little children, ye can in nowise enter into the kingdom of heaven," her soul beamed from her eyes, lighting up her pale countenance with a spiritual radiance, and my heart was filled with a new and strange delight.

My friend illustrated the subject by presenting to us, in glowing language, the beautiful picture, in all its sweet natural simplicity, of our Savior when at the house of Lazarus and his two sisters, Martha and Mary; the latter sitting quietly at his feet, her head resting upon his knee, listening to those divine words which fell from his sacred lips, with no thought, disturbing her tranquil mind, of its *impropriety*, which alone would have been seen or noticed by the Mrs. Grundys of the present day. And before mankind can be really happy, this false mask, which serves but to hide deceitful hearts, must be torn off, and our natures perfected, and then left free to act out their own generous impulses, fearing nothing but God and the truthful monitor He has placed within us; for it is indeed "glorious to live and glorious to die;" and if we have lived here a truly glorious life, "death will be but the gate of endless joys;" and let us praise God for the hope of immortality; for that bright future, where, amid scenes which display the harmonious works of the Creator, we may contemplate their beauties, in the company of congenial spirits, ransomed forever from sin and death. And were we to live in strict accordance with the three-fold laws of our being, we should be happy beyond what we can now conceive, and should then feel the truth of this saying of our Lord, "the kingdom of heaven is within you."

Luna.

[For the California Farmer.]

"An Appeal to Wives and Mothers."

Messrs. Editors: In the Farmer of June 5th, under the above caption, your correspondent "Rosa" remarks, "Would you have your husbands spend more of their leisure hours at their own firesides, instead of seeking other society than yours? and spending night after night in drinking and gambling with beastly companions? Then make your homes attractive, and use economy; be saving of your time and money; dress neat and becoming, but ever within your means; * * * * * and if you would have your husband look up to you, and learn of you, you must show him that you love and appreciate *his society* and *he* is *all the world to you.*

"If he has got any heart he cannot see you toiling day after day, and denying yourself all society save *his* and your children's, to smooth the way of life for him, without (at least) giving you *kind words*, and spending as much of his leisure time in your society as he possibly can." Now this I conceive to be the *duty* of wife and mother; but why stop here? Why not go further? When all is done, when every effort which Love, Duty and Affection require have been made to no purpose, why not point out the Duty then? When he who stands pledged before high Heaven, to love, cherish and protect while life shall last, renounces the society of one whose heartstrings are already breaking—one who, perchance, for her love towards him has been banished from a Father's roof; alike regardless of her tears or prayers, turns him from his home and seeks amidst the Bacchanalian revels that comfort, which even beasts would loathe; until overcome by the intoxicating draught—reeling, swearing, staggering, he seeks his home, where is the duty of the wife and mother? Is it to persevere, and after oft-repeated trials, to still live with, and bear children to him, whose every act and deed is but a foul stain upon society? No! Even though public opinion (that is man's opinion) condemn, I conceive it to be the duty of no woman, to rear children to call a DRUNKARD by the endearing name of Father. Show me the man who would, like a slave, toil from the rising to the setting sun, week after week, month after month, not only debarred the society of his wife, but with the full consciousness that she sought him only when the grog-shops and gaming tables had been closed, and she had no other place to go, and even then with an angry scowl upon her face; with no kind word or sympathizing look, but whose aromatic breath denotes the contiguity of King Alcohol—tell me "Rosa" would it not be truly beautiful to witness the devotion of Man, under such circumstances, clinging through life's vicissitudes to *her*, from whom he receives nothing but abuse? Oh, Man! thou "noblest work of God!" Go take a lesson from the brutes that cringe at thy feet; but dream not, with the curse of drunkenness upon thy soul, that thou wilt ever be elevated to their level. Subscriber.

Rattlesnake, June 14, 1857.

We are glad to hear from a "Subscriber" upon this all-important duty of a *husband* or *wife*, in those cases of drunkenness, where to remain in what should be home, would be a *living death.* This question of drunkenness is one of vast moment and much could be said on both sides. We hope to draw others out, and therefore remain silent, only remarking that we hope this subject will be handled without gloves.

Don't Grumble.—He is a fool that grumbles at every little mischance. Put the best foot forward is an old and good maxim. Don't run about and tell acquaintances that you have been unfortunate. People do not like to have unfortunate people for acquaintance. Add to a vigorous determination, a cheerful spirit; if reverses come, bear them like a philosopher, and get rid of them as soon as you can. Poverty is like a panther—look it steadily in the face and it will turn from you.

Obituary.

[We take from the Chronicle the annexed beautiful and truthful tribute to the departed spirit of one whose life and memory are sweetly hallowed. No one can read such eloquent and glowing thoughts, from one of the most gifted writers of our land, and not be made better.]

"Death hath many forms, they should not all be fearful."

On Thursday last, at the peaceful hour of departing day, the Angel of Death passed through our city, and plucked from the parent stem one of the most lovely of human flowers, to transplant in the fair Garden of Paradise. We feel that a fragrance has passed from our social paths, and we mourn for the beautiful who will return no more; but we rejoice with the departed one that she closed her weary eyes on the sufferings of earth's sorrowful night, to open them on the morning of a brighter day.

Georgiana Gibson, the subject of this obituary, was the only child of Lewis and Almira Gibson, well known and esteemed in San Francisco as among the earliest and most respectable citizens of the place. The writer has known and loved Miss Gibson from her childhood, and watched with deep interest her gradual development into womanhood. She was very delicately organized, both physically and mentally, and combined rare personal attractions with a superior intellect and a most elevated moral and religious nature. Great attention was bestowed upon her education, by her loving and devoted parents, and to the charms of natural endowment were added the graces of high culture, which rendered her a most delightful companion and friend. Her soul was keenly alive to the harmonies of the universe, and she was a fervent worshiper at the shrine of the beautiful. The voices of the winds, and waves, and flowers, and distant spheres, were all familiar, and recognized by her as different parts in the great anthem of Eternal Love. Indeed she was touched in her cradle by the Genius of Song, and her spirit attuned to harmony.

Persons thus highly organized mature early, and die in youth—the discordant sounds, and conditions of earth jar harshly upon their sensitive natures, and the indulgent Father sends his loving, pitying Angels to bear them away to a more congenial clime. And it is well—we cannot hope or wish to retain them to struggle with the stern realities of life. We feel, while we look upon them, that they are stray children from the heavenly Eden, sent on a *Mission of the Beautiful* to Earth, and that our tenderest and strongest love cannot hold them back from the bright home for which their spirits pine. Death is not a melancholy and unwelcome visitor to such as they. And the last illness of our dear departed friend was in intimate correspondence with her life, and a striking illustration of Christian faith triumphant over the terrors of the tomb. Our departed sister was widely known and beloved in California as well as in the early home of her childhood, and her irreparable loss will be deeply felt and lamented. We grieve most of all for the bereaved Father and Mother. They will miss the pure and sanctifying light of her love—and the song she used to sing at the early morning and evening time—and the footfall near their chamber door—and the sweet ministration in sorrow—and the full sympathy in joy, and will go down mourning to the grave; but on its dark portals they will be welcomed by their angel daughter, and she will lead their earth-weary feet "through the green pastures and beside the living waters" of the "better land."

Through a lingering and distressing sickness of several weeks the deceased endeared herself more than ever to her parents and friends, by patient and loving spirit, and her quiet submission to the will of Heaven. And when, at last, she stood upon the utmost verge of Time, and her spirit-house dawned brightly upon her immortal mission,—and spirit voices fell in music upon her ear,—she caught up a lofty strain, as if from the golden harps of angels, and in words of exquisite beauty, poured forth on the receding earth the thrilling music of another world. Never had her melodious voice gushed forth in freer, gladder tones. And then she folded her delicate hands upon her bosom and gave utterance to a fervent prayer—and thus in song and prayer, and blessing, her transient, beautiful life flowed forth to God who gave it. A smile of ineffable sweetness still lingers upon her lips and a halo of glory about her saintly brow. Oh! who would not exclaim "Let me too, die the death of the righteous, and let my last end be like hers."

Sarah M. Clarke.

PHALON'S

CHEMICAL HAIR INVIGORATOR.

The most complete article of the kind ever before offered to the public. It has stood the test of twenty years in this county, and not one of the many hundreds of imitations have been able to compete with it for preserving, dressing, and beautifying the hair, and keeping the head clear from dandruff, &c. It is inestimable; in short it is everything the hair requires. Price, 50 cents and $1.

PHALON'S PAPHIAN LOTION, OR FLORAL BEAUTIFIER.

A great cosmetic for beautifying the skin and complexion, and for curing chapped hands, face, lips, tan, sunburn, freckles, pimples, scalds, burns, &c. A sure and safe cure for the piles—one washing will give instant relief. After shaving, it is very soothing to the skin. It keeps the hands soft and white, and for inflammations of the skin it will be found to be a great remedy. Price, One Dollar per bottle. Made and sold by E. PHALON.

PHALON'S MAGIC HAIR DYE.

One of the very best natural dyes in the world. Its long use has proved it to be beyond comparison; and being a vegetable production, no injury can possibly be done to the skin. It is easily applied, and you can obtain a black or a brown which will defy the best judges to tell it from nature itself. Price $1 and $1 50 per box. Made and sold by E. PHALON, at 197 Broadway, corner of Dey street, and 517 Broadway, St. Nicholas Hotel, New York, and all Druggists and Fancy Stores throughout the United States.

DIOSCOREA BATATAS,
New Chinese Potato, or Yam.

THE experience of another season in the cultivation of this NEW ESCULENT, warrants us in confirming all we said in relation to it last year. Wherever it has fallen into the hands of judicious cultivators, and received the care necessary to its full development, the result has proved entirely satisfactory in all respects, and we can confidently reaffirm that "of all the esculents proposed as substitutes for the diseased Potato, the Dioscorea Batatas is certainly the ONLY important one." We can now supply small roots from four to nine inches long, carefully packed for transport to the Pacific, at three dollars per dozen; and small seed tubers, suitable for transport by mail, at one dollar and fifty cents per dozen, or ten dollars per hundred, *postage prepaid.* Description and directions for culture furnished with each package.

NEW CHINESE SUGAR CANE (Sorghum Sucac).—We can supply seed of this now celebrated and invaluable Plant, in packets, at twenty five cents each, prepaid by mail, or at seventy-five cents per pound, in quantity.

Also,—CHUFAS, or EARTH ALMONDS; New ORANGE WATER-MELON; KING PHILIP CORN. All of which, with the largest and most extensive assortment of Garden, Flower, Fruit Tree and Field Seeds, to be found in the United States, are offered at the lowest rates.

Orders by mail (including remittances) promptly responded to by J. M. THORBURN & CO.,
Seedsmen, Nurserymen, &c.,
v6-24 tf 15 John street, New York City.

Northern Sugar Cane Seed.
(HOLCUS SACCHARATUS.)

HAVING purchased from Mr. Wray, his importation of Chinese Imphee or Sorgho Seed, grown in France, under his own immediate inspection (thereby insuring the utmost purity), we offer it for sale in quantities, at fair rates, and in packets, prepaid by mail, at 50 cents and $1 each. This Seed, *so superior to any other in the market*, can be procured *only* from J. M. THORBURN & CO.,
v7-19 3m 15 John street, New York.

SEEDS.

HOVEY & CO.,

Also, from their own Nurseries, a very extensive collection of Fruit and Ornamental Trees and Shrubs, Grape Vines, Strawberries, Gooseberries, Roses, Greenhouse Plants, &c., embracing the best varieties in every department.

Catalogues sent gratis on application.
☞ Remittances must accompany orders. v6-19

Sugar Beet Seed.

WE have received a lot of very superior French Sugar Beet Seed. It is of extra quality, new and fresh, and imported expressly for trials of beet raising for sugar making.

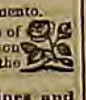
Persons who desire a superior article can order by express, and the seed will be carefully forwarded. Such orders should be addressed to our office at San Francisco, superscribed "Seed Order." [v7-11] WARREN & CO.

Garden, Ornamental and Forest Tree Seed.

A VERY choice assortment, selected by Messrs. Thorburn & Co., of New York, with great care, expressly for BRYANT & CO.,
v7-6 2m 68 Battery street.

Smith's Pomological Gardens AND NURSERY.

On the American River, 2½ miles from Sacramento.



THE stock of Trees offered to the patrons of the above well-known establishment this season is unusually large and fine, embracing by far the largest assortment of

Fruit and Forest Trees, Shrubbery, Vines and Greenhouse Plants

to be found in any one establishment on the Pacific Coast. Care and experience in selecting and propagating varieties, are always the safest guarantee for their correctness, and preventing errors as well as disappointment to purchasers.

FRUIT TREES—fine, vigorous, and in every variety of the following:

Apple, Peach, Pear
Cherry, Nectarine, Apricot,
Fig, Currant, Gooseberries,
Raspberries, Strawberries, Grape Vines,
All of the choicest kinds.

ORNAMENTAL TREES, FLOWERING SHRUBS AND HARDY CLIMBERS.

Among the fine Trees are the following varieties:

Elm, Locust, Catalpa,
Maple, Laburnum, Weeping Willow,
Ash, Ailanthus, and China Trees.

Some fine Arbor Vitæ and other Trees and Shrubs too numerous too mention.

We would call particular attention to our large stock of *extra size* Peach, Plum and Apricot Trees, believing that the specimens of fruit exhibited by us in the Sacramento and San Francisco markets have been unsurpassed in size, quality or flavor.

ROSES, in all their classes, as follows: Tea, Bourbon, Noisette, Hybrid, Perpetual, Moss and Climbing Roses.

Our CAMELLIAS are of the finest varieties, and for health and beauty we challenge comparison.

GARDEN SEEDS.—4,000 pounds of Garden Seeds that have been raised upon our own grounds, all of the present season's growth, and of the best varieties, and sure to grow.

☞ Catalogues furnished to applicants.

*** Orders sent by either of the Expresses, and stating how they shall be forwarded, will meet with prompt attention.

A. P. SMITH.

NOTICE.

We caution the public to be careful that they purchase only of our regular authorized agents. Some venders of Trees, &c., have falsely represented themselves as our agents, *offering for sale spurious and worthless stuff*, very different from our fine and vigorous stock.

Our Agents will exhibit a certificate showing their right to act, and will furnish Catalogues to all who may desire them.

Go! There, Everybody! Face the Music and Read!

If you have business of any kind to transact, is it not important that you should endeavor to get as near as possible to where business of all kinds is known to center?

If you wish to patronize a house conducted on strictly temperance principles?

If you want to stop at an establishment favorably known throughout California, Oregon, and all other places, for its moderate charges, good tables and best of beds, together with order, comfort, convenience, and superior accommodations?

If you desire all these, we advise you to go to

WOODWARD'S

27, 29 and 91 Leidesdorff street---119 and 121 Sacramento street.

The establishment is centrally located in the principal business part of the city, and in the immediate vicinity of the Steamship Company's Office, the Express Companies Offices, and the United States Branch Mint.

BOARD, per Week, $5. BOARD, per Day, $1. MEALS, 50 cts. LODGINGS, 50 to 75 cts. per Night.

☞ Single Rooms, furnished complete, 75 cents per Night.

☞ Rooms or Lodgings can be had by the Night or Week, with or without board, to suit the convenience of all.

The Beds are fitted up in the very best style, with patent French springs, and the best of curled hair mattresses, clean bedding, &c.

☞ BATHS FREE! ☜

By unremitting attention and untiring efforts to furnish the greatest amount of comfort and convenience at extremely low prices, the proprietor hopes to merit a continuance of the increasing patronage that the What Cheer House at present enjoys.

For the accommodation of miners and others having money or valuables, there are two large safes in the office.

There is an extensive Library and Reading Room, well supplied with papers, periodicals, &c.

THE HOUSE IS OPEN ALL NIGHT.

☞ Travellers will please to remember that there are no "Runners" connected with this establishment.

The What Cheer House is conducted on strictly temperance principles.

FIRST PREMIUM AGAIN

R. H. VANCE,

HAS, by the superiority of his Daguerreotypes and Ambrotypes, again received the FIRST PREMIUM, awarded by the State Fair of 1856, being the THIRD TIME received against all competitors.

Rooms, cor. Sacramento and Montgomery streets, SAN FRANCISCO.

What is an Ambrotype?

'Tis a likeness of one's self,
So true to nature, that we feel
That we would speak to it and hold
A converse with our higher nature.
'Tis not the mortal part we see: but
That which gives us back look for look;
The very counterpart of our own selves:
And why is this? Who hath the power
To paint or picture thus, and make of us
A something more than shadowed self?
To bring before our vision a form
So true to nature, that e'en ourself deceived
More than when we see our face in glass?
Who hath this power, we ask again,
To make ourselves appear so plain?
To catch each look, expression, form—
The very eye with love to warm?
Who hath this power? this wondrous art?
This power to give our counterpart?
To paint like life, at single glance?—
There's but ONE ARTIST—

DRUGGIST

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of our natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Budds' Nerve and Bone Liniment, warranted the best in California.

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v7-7

REWARD OF FOUR THOUSAND POUNDS.—A proclamation has been issued by the government of New Zealand offering rewards to the extent of £4,000 "for the discovery of efficient means for rendering the flax and other fibrous plants of New Zealand available as articles of export." £2,000 will be paid to the person who shall, by some process of his own invention, first produce from the *Phormium tenax*, or other fibrous plant indigenous to New Zealand, one hundred tons of merchandise; £1,000 to any other person who shall succeed in doing the same thing; and $200 to each of the first five persons, other than those entitled to the first and second rewards, who shall by any process, whether of his own invention or not, produce from the *Phormium tenax*, or other fibrous plant indigenous to New Zealand, twenty-five tons of merchandise. The merchandise must be saleable as an article of export from the colony, and must be produced at a cost not exceeding 75 per cent. of its value at the port from which it is exported. The process must be fully made known, so that the public may at once participate in its advantages. Claims for reward may be preferred at any time before the 1st of January, 1859.

WHEAT CROP.—The New Albany Ledger has the following very sensible remarks: We do not remember a year in which we have not seen paragraphs going the round of the papers headed "wheat crop failed," and although these little notices are so industriously circulated, still the wheat crop more frequently turns out good than bad. This year we see many such notices afloat, but we are assured by practical farmers that the wheat crop never was better, and should a partial failure occur more wheat would be raised than in any previous year, for five acres have been sown this year to one in any previous year in the wheat growing districts. We may confidently look forward this year for cheap bread, and not only cheap, but cheaper than has been known for years.

SANTA CRUZ HARVESTING.—The process of harvesting has in good earnest commenced. The crops in every part of the county, so far as we have heard (says the Sentinel), are more than usually good. The wheat has not yet been injured by the rust, the disease of which our wheat growers stand annually in so much dread; everything betokens an abundance. Yet the good prices obtained by our farmers last year for their productions are hardly to be expected, although the crops south of San Jose and Santa Cruz county are generally short, and, in many places, total failures; yet all the papers, north of those localities, speak of the prospects as unexpectedly good. The crops south never have been sufficiently extensive to materially affect the market, even in seasons of the most abundance—neither are the number of consumers sufficient so to do in times of scarcity. We have no doubt a fair supply for the State will be harvested, without drawing upon other markets, and, if so, productions cannot be expected to bring more than ordinary prices.

THE CROPS.—During the past week, says the Sonoma County Journal, we have made inquiries of farmers and others from different sections of this county, and are confirmed in the opinion that the crops of the present season will prove remunerative to the grower. The Grass crop has proved far heavier than first anticipated. The Grain harvest will also greatly exceed the estimated amount per acre. We are inclined to the opinion that the deficit per acre the present year, as compared with that of 1856, will not probably exceed one fourth. If this be the case, this will most assuredly prove a prosperous season to our farmers, as the yield of 1856 was unusually heavy. In relation to the Potato and Corn crops, we are not sufficiently advised to speak with any degree of confidence, as the reports are very conflicting; some asserting that they must be small, while others report them quite flourishing.

THE CROPS IN BUTTE.—The Record, of Monday, June 22d, gives rather an unfavorable picture of the crops in the valley. It says:

"We learn from Alexander Kerby, that at Wilkins' ranch, the crops of hay are less than one-half as large as on previous seasons, and on his own and neighboring ranches the crops of hay and grain have been very much injured by the drouth. The valley is as parched and dusty as in the middle of August, and the arid plains look like broad fields of stunted and ripened wild oats. The roads are so very dusty as to make travel remarkably unpleasant to man and beast.

Mr. Elijah Smith, who resides at a ranch near San Andreas, met with a painful accident on the 15th, in being capsized with a load of hay, so that the prongs of the hayfork passed through his body, from the left shoulder blade to the breast.

NEURALGIC HEADACHE.—The application of towels, wrung out in hot water, to the forehead and temples, is represented to be an efficacious and speedy remedy for headaches arising from neuralgic affections.

DANGEROUS.—A late Southern paper, speaking of the damage done by a tempest, says—"A heavy *gal* raged furiously here on Wednesday last."

ON Tuesday, the Sacramento Committee of the Wagonroad movement collected $1200.

The Great Stump Puller.

WE invite the attention of all who are clearing lands, to the Stump Puller which we offer to the people of the Pacific Coast. Read the powers that can be obtained by this machine in the annexed descriptions of the patentee:

The Orange Improved Stump Machine.

Farmers! Mechanics! Speculators! all Progressive Men! Come, stir the Stumps of this swampy Nation!

My Stump Extractor is a machine of great power. It clears away scores of stumps, great and small, in a day; and doubles the value of lands at once.

It is a good *ROCK MACHINE*. It moves massive rocks, many tons weight, with perfect ease.

It is the best machine to *MOVE BUILDINGS*, ever invented. One of common size has more than 300 tons power, and the power increases in ratio with the size.

The weight of it corresponds to the work and will range from 200 to 1,500 pounds. The machine is exceedingly simple, easily operated, and not liable to get out of repair. One man, with a horse, can work it, though two work it to better advantage. One machine will answer for a whole town.

Gentlemen! have you roads to build on stumpy routes? Have you a forest you wish to fell, in order to bring in grains and grasses? Have you lands near villages, defaced by rocks and stumps? lands you wish to turn into house lots or gardens? Get my machine!

It will do the work of more than fifty men. Do not wait a hundred years for the winds and rains to do your work, when it can be done in a day. WM. W. WILLIS.

The undersigned now offer the patent right of this machine for any portion of California, or the exclusive right for all California. It will gave capitalists a chance to make a fortune. Ample testimonials of its worth can be given. tv7-21 WARREN & CO.

Hemp Seed.

SUPERIOR Hemp Seed, just received. No country in the world can surpass California in the production of this article.

MISCELLANEOUS.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots or Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c., Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

v6-1

Hayward's Hotel,
Five Miles from San Leandro, near the Castro Ranch.

THE Proprietor of the above Hotel takes pleasure in calling the attention of his patrons to his house at the present time. Having taken some pains to newly finish and furnish his house and prepare it for the traveling public, he feels confident he can offer a pleasant and comfortable "home" for the traveler, or for any one that wishes to spend the summer season in one of the finest valleys of the State.

The location is one of the most healthy and delightful spots in Alameda county. Situated upon a commanding eminence, it presents a magnificent view of one of the most beautiful and highly cultivated valleys of California, and opens the prospect to the bay and harbor of San Francisco, and the country around for many leagues.

The Proprietor has spared no pains or expense to fit and furnish his rooms in a style having reference to neatness and cleanliness and comfort. These he feels confident will be approved; and every effort will be made to have the table and and every other department subserve the pleasure of his patrons.

A good Stable is attached to the house. Horses in saddle or harness can be furnished for the pleasantest road scenes in the country—the Springs, the Mission Gardens, the Fishing Grounds, and other places, furnishing abundant sources of amusement for the benefit of invalids or persons desiring recreation and pleasure.

☞ The patronage of the public is solicited. v7-18 3m

BOOKS, &c.

Just Published.
THE GRAMMAR
OF
ENGLISH GRAMMARS,
By GOOLD BROWN,
Author of "The Institutes of English Grammar," &c., &c.
Second Edition—Revised and Improved.
With Portrait of the Author.

"It leaves far, very far behind it, everything which has hitherto appeared under the denomination of an English Grammar. * * * It is in the amazing extent and completeness of the 'Grammar of Grammars'—the topics, definitions, rules and illustrations; in the acute investigation which is everywhere displayed, and in the minuteness and perfect finish with which every principle is wrought up, that the distinguishing features of the work are manifestly apparent. * * * We see, as the result of all that has been done by our author, a noble and most important work—ample, critical and symmetrical in a high degree—and, what is a most remarkable feature, an original work—the work of one head and one pen."—[The District School Journal of Education.

"We have carefully examined its pages, and feel bound to acknowledge it a standard work—settling numerous and vexatious disputes among teachers and scholars, and rendering plain and interesting what has heretofore appeared difficult and uninviting, and even unprofitable to those who aimed at certainty."—[The American Artisan.

V. M. Rice, late Superintendent of Public Instruction for the State of New York, in a recent letter, speaking of the author of this work, says: "I know of no man to whom this country is more indebted for a correct knowledge of our language than to him."

Also, recently Published, Revised Editions of
Brown's First Lines of English Grammar,
For Young Learners.
Brown's Institutes of Grammar,
For the Higher Classes.

Samuel U. Berrian, of Rye, School Commissioner for the Second District of Westchester county, N. Y., says:

"The definitions and rules are rigidly exact, the paradigms neatly arranged, and the formulas explicit and easy of memorization. *Method* is a marked feature of the book [First Lines], and as to its didactics, whatever is said, is said in the fewest words possible; principle is never found clashing with principle; there is a due sequence in the parts; and all goes to make up a harmonious whole.

"Brown's Grammars are of a class *never to die*. At present unapproachable excellence, and the highest possible authority, we doubt if they can ever be superseded, at least while our language remains what it is. The 'Institutes,' the author's intermediate, or academic Grammar, comes forth now also rejuvenated, elaborately polished, and beautiful to an exterior wrought up, that the distinguishing features of the work are manifestly apparent. * * * We see, as the result of all that has been done by our author, a noble and most important work—ample, critical and symmetrical in a high degree—and, what is a most remarkable feature, an original work—the work of one head and one pen."—[The District School Journal of Education.

"The definitions and rules are rigidly exact, the paradigms neatly arranged, and the formulas explicit and easy of memorization. *Method* is a marked feature of the book [First Lines], and as to its didactics, whatever is said, is said in the fewest words possible; principle is never found clashing with principle; there is a due sequence in the parts; and all goes to make up a harmonious whole.

"Brown's Grammars are of a class *never to die*. At present unapproachable excellence, and the highest possible authority, we doubt if they can ever be superseded, at least while our language remains what it is. The 'Institutes,' the author's intermediate, or academic Grammar, comes forth now also rejuvenated, elaborately polished, and beautiful to an exterior. We call the attention of teachers and private learners to this work, especially of those teachers who have the conduct of higher schools."

"Brown's 'First Lines,' and his 'Institutes of English Grammar,' in their original forms, were the best Grammars we were used; with their improvements, they justly command the good will of teachers."—[Massachusetts Teacher.

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscriptions.

2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.

3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.

4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction, they are held responsible.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

☞ Postmasters would oblige, by a strict fulfillment of the regulations requiring them to notify Publishers, once in three months, of papers not taken from their office by subscribers.

Postage of the Farmer.—The Postage of the FAR
